CLOCK CHESS 89

CLOCK CHESS 89 is the strongest and most versatile chess program yet for your PCW computer. It has the most advanced 3D graphics, the widest range of options, the power to play incredibly fast and the intelligence to selectively search deep into the position. CLOCK CHESS 89 has been tested against a wide range of other chess programs and has shown itself to be stronger than any of them.

Written using the latest techniques CLOCK CHESS 89 does not use the usual "brute force" method of searching for the best move, but instead is packed with chess knowledge which uniquely allows it to search only those moves which are "sensible" or "interesting" and not to waste time evaluating lines of play which it regards as "trivial". In addition, it has a variable search depth which results in a deeper search of active lines, thus reaching those parts that other chess programs cannot.

- Now with added strategic knowledge to give an extra edge
- massive 44,000 byte, user extendable, openings library
- stunning 3-D graphics
- annihilates other PCW chess programs
- largest range of options, cursor controlled for easy move input
- special easy mode for beginners
- full display of its thought processes gives you a fascinating insight into its search mechanism
- perfect understanding of all the rules of chess including underpromotion, draw by repitition and the fifty move rule
- achieves all the standard mates including those occurring with minor pieces in the endgame - well able to handle difficult pawn endings
- makes full use of the extra memory of the 256K and 512K PCWs

"CLOCK CHESS is a lively and interesting opponent. An aggressive program that keeps you on your toes... it does up Colossus Chess nicely" Mike Basman, UK Chess Champion.

CLOCK CHESS 89 IS COMPATIBLE WITH ALL PCWS £19.95

NEW

CLASSIC GAMES 4 Special Edition

THESE FOUR CLASSIC GAMES FROM CP SOFTWARE NOW COMPILED ON ONE DISC, BEAUTIFULLY PACKAGED, MAKES THE IDEAL GIFT FOR THE PCW OWNER.

CLOCK CHESS 88 - "strongest chess for PCW, 3D graphics are well done, enjoyable to play against, 5 out of 5 - 8000 PLUS

BRIDGE PLAYER 2000 with TUTOR - very well thought through, fine display, gets the most out of Bridge on the computer - PC PLUS

BACKGAMMON - "good implementation of the game, uses the doubling cube properly, good graphics - 8000 PLUS

DRAUGHTS - "extremely strong play, 3D graphics are pleasant to use" - 8000 PLUS

FOUR GREAT GAMES FOR THE PRICE OF ONE.

CLASSIC GAMES 4 - Special Edition

£19.95

all you ever wanted to know PLUS 2
about GRAPHICS, THE UNIVERSE
AND EVERYTHING FOR PCW
but were afraid to ask

SECOND UPGRADE - WITH YET MORE HITHERTO UNPUBLISHED INFORMATION - THIS HAS TO BE THE ESSENTIAL TOOLKIT FOR THE PCW PROGRAMMER

70+ ROUTINES AND 100% PCW COMPATIBILITY

- Create devastating graphics using fast smooth, user definable sprites.
- Directly access RAM disc.
- Create User Defined Graphics.
- Modify character set, send UDG's and enlarged characters to dot matrix printer.
- Experiment with sound routines.
- Direct access to Video Ram.
- Discover hitherto unpublished low level hardware information, Ports and edge connector diagram.
- Easy to use from Basic, Pascal, Assembler, CP/M etc.
- Full source code supplied.
- Page in and directly access all 512K ram segments.
- Bit mapped keyboard scanner for fast games software.
- Tips on speeding up video ram access.
- Set, reset and test individual pixels to 720 by 256 resolution

ROUTINES INCLUDE:

LineDraw/Erase, Pixel Plot/Erase/Test, Flood Fill, Create/Plot/Move Sprite, Change char. set, UDG's, Turn Screen on/off, Invert Screen, Sound, Send UDG's and Double Height/Double width chars to dot matrix printer, Wait for Frame Flyback, Delay, Randomise, Move Cursor anywhere, Read Joystick, Disc Motor On/Off, Full Software Reset, Save/Load Memory from disc or Ramdisk, Find System Clock, Save/load Screen, Scan Keyboard, Full control over dot matrix printer...AND MUCH MORE!

Comprehensive manual plus detailed documented source code. "ALL YOU EVER..." as used by Real Time Software to write STARGLIDER

"ALL YOU EVER..." IS COMPATIBLE WITH ALL PCWS £24.95

NEW

LIGHTNING BASIC PLUS

80+ NEW BASIC KEYWORDS AND 100% PCW COMPATIBILITY, THE ULTIMATE PCW MALLARD BASIC EXTENSION.

First ever program able to trap Mallard Basic's command list. Produces devastating graphical output with fast smooth sprites for the games programmer and icons for more professional software. We guarantee you will stand out from your capacity for creativity using this amazing software.

Many original features provide the ideal environment for the Basic programmer. Now, Special Plus version adds yet more functions.

- circles, ellipses, regular and irregular polygons
- run CP/M program from within BASIC
- high and medium resolution graphics, plots, lines, fills
- multiple sprites and icon graphics
- User Definable Graphics, new character sets, 4-tone colour
- new editing facilities, variable list, search, ascii string dump etc.
- save screens and instant multi-screen recall
- full A4 screen dump to dot matrix printer
- timer, sound routines etc.
- easy cursor and printer control
- all functions use simple-to-use BASIC keywords
- masses of demonstration programs supplied on disc
- "knocks spots off other basics"

LIGHTNING BASIC IS COMPATIBLE WITH ALL PCWS £24.95

NEW

Z80X68000 SOURCE CODE TRANSLATOR

Z80 to 68000 Source Code X-Translator for ATARI ST on 3.5" disc.

Are you an assembler language programmer?

Do you have a library of source code 'chunks' you keep re-using?

Do you want fast, efficient conversion to ST and AMIGA?

Then Z80X68000 is the tool for you.

Now instead of re-writing whole programs or program chunks for 68000 computers, you can directly translate from Z80 source code, edit the 68000 source code thus created and/or directly assemble it.

Remember, most programs consist of an outer shell, inner logical code, system dependant code and graphics routines. Z80X68000 will easily convert the outer shell and the inner logical code giving you a bug-free start to get your software up and running. You can convert from one computer to another as easily as if they both used the same micro-processor.

Z80X68000 produces source code that runs at 2MHz Z80 equivalent on an ST. With a quick manual optimisation of time critical loops you can achieve 12MHz equivalence or better.

Z80X68000 for ANY ATARI ST on 3.5" disc + documentation £99.95

Atari ST's available from £250, please phone for details

NOW WITH STOP PRESS, EVERYONE CAN HOLD THE FRONT PAGE NEWS.

STOP PRESS

'STOP PRESS' is the Ideal DeskTop Publishing program for home enthusiasts, schools, societies and small businesses. 'STOP PRESS' makes it simple to create professional newsletters, leaflets, forms and flyers, in fact anything where text and graphics are required - placing you right at the heart of the DeskTop Publishing Revolution.

Text can be entered from within 'STOP PRESS' or imported from your word processor with fully automatic on screen text formatting including centering, ragged right and literal justification.

The graphics capabilities of 'STOP PRESS' are equally versatile. The ability to import digitised and scanned images is complimented by facilities for drawing spraying and painting.

Enhanced cut and paste facilities replace traditional methods (no scissors and glue supplied or required).

'STOP PRESS' includes an excellent zoom facility for adding those finishing touches before your work is output to a wide range of Epson compatible dot matrix printers.

EXTRA EXTRA

Extra, Extra is a collection of instant clip art and new

AMX MOUSE

Stop Press can be used with a joystick or keyboard but the AMX Mouse gives you the control and flexibility which you would expect from the most accurate pointing device available.

Established as the market leader the AMX Mouse has been the driving force behind a whole host of new applications from other software houses. With its unique design and high resolution movement the AMX Mouse is a must.

'STOP PRESS' (AVAILABLE FOR	SOFTWARE ONLY	WITH AMX MK. 11 MOUSE	EXTRA! EXTRA!

LET'S LEAVE THE LAST WORD TO THE PRESS...

"the most comprehensive in its field... very high quality printouts are possible"

Amstrad Action

"the best graphics available in a DTP package"

8000 Plus

"exceptionally useful... the manual was hardly necessary"

Commodore Computing International

"it's phenomenal... this product is worth every penny"

Educational Computing

"one of the most professional packages I've seen... all I can say is go out and buy it"

A&B Computing

NOT WORTH THE PAPER...

Here's a funny joke. It goes like this. 'Now that we've got a PCW,' says the manager showing round some clients, 'we have a hi-tech paperless office.'

'And what's this room for?' asks one of the clients. 'Ah,' says the manager, 'This is where we keep our continuous paper for drafts, our letterheaded paper for the daisywheel printout, our manuals, our disc boxes, our copies of 8000 Plus, the hard copies of all our database and payroll records,' etc. etc. ad nauseam.

Maybe it isn't that funny after all. The computer industry generates horrifying amounts of waste paper, and we don't exactly help by printing thousands of magazines every month which themselves encourage people to do things like send mailshots to all their club members.

All of which is quite upsetting, because the potential for computers to stop the squandering of the earth's diminishing forests is vast. Why print stuff out when you have it on disc? But old habits die hard, and a society that believes nothing is worth anything unless it's down on paper has, through the computer, increased its consumption of the stuff several times over. Instead of printing one version of the letter and tippexing the mistakes, you do a couple of drafts, then an NLQ or daisywheeled version, then another one because that one came out printed too far to the left, then another

as you realise the date's wrong...

So what, the cynics are muttering, whatever I do, it won't make any difference, it's only a gesture, the clearing in the Amazon rainforest is the real culprit, etc. etc.

Rubbish. The only way the current lip service to things Green will get translated into fewer trees being made into pointlessly thick brochures that come mailshot with your Access bills and go straight in the bin, is when market forces have it running that way. Market forces will do that when public opinion is strong enough. And public opinion starts with you and me. Perhaps the best Christmas present we can give ourselves is a bit of awareness.

But that's enough of that. To all our readers, whether in Britain, abroad or just scanning this in WH Smith's, a very happy and peaceful Christmas holiday. Mine's a double mineral water. Cheers!

Rob Finley

Count on us

FOUR pages of Tipoffs, we promised you last month. And, OK, there are only three.

Our excuse? One tipoff – printing text in columns of two or three using LocoMail – was so good we ran it as a separate article. Aspiring desktop publishers can find it under 'LocoMail' on page 33. This makes this month's

Tipoffs the widest ever, stretching from page 33 to 72.

Nobody's perfect

Given that there are about 40,000 words in each issue of 8000 Plus, getting 39,995 of them right is not a bad striking rate (99.99%). However, by that well-known mathematical principle The Law of Averages, some mistakes are bound to occur.

First, LocoFile, the database add-on to LocoScript reviewed glowingly last month, is £29.95 not £24.95 as we said. See PostScript.

Second, the company who have lots of copies of Hitch Hiker's Guide to the Galaxy and Leather Goddesses of Phobos are not ComSoft as we said but Copy Comm

Software of Cupar, Fife; their number is 033 77 444.

In the Tipoffs, we managed to cut out the last couple of lines of the screen shots showing the vital routines to update your LocoMail data files; well, we know you like a challenge.

Questionable?

We've been inundated with replies to the questionnaire that was in issue 25. Most of you seem happy with the magazine at the moment but there were plenty of ideas and suggestions for extra features and items. We'll be going through them in detail shortly, but in the meantime, here are the five lucky winners of the £25 software vouchers we promised:

Ian Goodhardt, Berks; Robin Gammon, Maidstone; Hazel Norrie, Irvine, Ayrshire; FT Murphy, Rotherham; WR Corbett, Weymouth.

The vouchers can be used against any software or hardware from our Special Offers pages.

8000 PLUS

The January issue of 8000 Plus will make acquaintance with your newsagent on December 22nd. Be resolute – order your New Year copy now!

NEXT MONTH

- *Adding a 5¼ or 3½ inch drive to your PCW – access to a new world
- *Portables roundup – your PCW and a PPC, or a Tandy, or Psion Organiser, or Z88... which would be best for you?
- *Digita's new package for the PCW: is it really a 'revolution'?
- *New games and programming packages reviewed
- *Four pages of invaluable tips
- *The complete buyer's guide to spreadsheets, graphics and games ... and much more!

When you buy a whole new Amstrad system, why use only half of its potential?

- 12 Issues of the Official Amstrad PCW Magazine. (worth £1.25 per month)
- Unlimited access to our PCW Technical Support Service.
- Nationwide PCW training facilities.
- 24hr Ordering Service.
- Discounted Software . . . best prices in the U.K!
- Monthly Amdata PCW Newsletter.
- Welcome Pack.
- Discounted PCW Maintenance Scheme.
- Introductory Gift if you join TODAY! (worth £6 - £10)

A Message from Amstrad's Chairman

Dear Amstrad Computer User,

You don't need me to remind you that you have selected the best computer in its price range. Numerous journalists from the specialist press have now contributed to the opinion that Amstrad computers represent the best all-round machine you can buy.

One of the many reasons why computer journalists have received our products so enthusiastically is undoubtedly our careful attention to providing information on the system and its software.

You can be a part of Amstrad's ongoing effort to inform and help users by taking advantage of this opportunity

to join the User Club. Catering only for the Amstrad computer user, this specialist support club was initially formed by Amstrad solely for the purpose of assisting you with all your computer needs.

There are many immediate and direct benefits available, so don't delay before filling out the application form below and sending it back to Amsoft.

Yours sincerely,

Alan Sugar
Chairman AMSTRAD Plc

Seconds on

The latest version of Clock Chess from CP Software is now available. Appropriately called Clock Chess 89 in anticipation of the New Year, the package will cost £19.95. The company claim their program can outperform any other 8 bit chess program in the world. Featuring 3D graphics, user extendable library of opening moves and a host of other features, the program follows Clock

Chess 88 which impressed chess critics with its very powerful play and large opening book.

For the more serious minded PCW user there is a Z80 to 68000 code converter announced for release on Nov 14 at £99.95. Details from CP on 0993 823463. ■

Amstrad ear

Amstrad Group Service Controller, Simon Angel, has decided to install a 24 hour per day Bulletin Board to his department for 24 hour a day advice and information. 'Even with 25 staff and 20 lines for his department alone some customers do not always get through first time,' he said.

The new board is imaginatively called Customer Services and is on (0277) 231276. The board will operate at V21, V22, V22 bis and V23 Baud rates running on Opus 1.03B. The system has been installed by Amstrad engineers and will provide interactive support as well as carrying Public Domain software.

The number for further information is 01-836 6801, but they are reluctant to give any information, further or not. ■

Shady characters?

MicroLink report a tremendous surge of interest in their interactive online adventure. Shades is a computer adventure game played

against real people pretending to be imaginary characters and computer generated mobiles who are often pretending to be real people.

The MicroLink personal directory (used to avoid remembering other peoples mailbox numbers) has been improved to allow checking for duplicates and deletion of entries.

MicroLink are offering £10 off your monthly bill for each new member introduced. Send their name and address by keying >RECRUIT.

In the wake of complaints concerning Mailfax, introduced by Telecom Gold allowing computer users to send messages to fax machines, MicroLink have introduced their own system.

Problems stemmed from the inability of Telecom Gold users to cope with the increasingly long string of numbers required for the fax service with the result that more than thirty percent of all messages sent in the first few days were sent to invalid numbers. This had the result you would expect and dramatically increased the level of complaints to BT.

MicroLink have rewritten the front end so that only the fax number itself has to be typed in.

They've also taken the opportunity to introduce Fax-Check (FAXCK), a simplified method

MicroLink

of finding out if messages queued for transmission have been sent or not. ■

But is it art?

HD Computer Aided Graphic Design have released a disc with two hundred and eighty individual clip art designs suitable for inclusion in both Stop Press and Newsdesk International.

NEWS

Amstrad in 'sub-standard' 8512s row

When Wrexham minister Rev. Keith Walker made the extremely sensible decision to buy a PCW he expected to have few problems. After all, the PCWs all come as standard systems, don't they?

Despite the rumours that come and go concerning the demise of the PCW8512 they are, of course, still on sale. The Reverend Walker bought his new 8512 machine mail order and despite a little hiccup (the first one didn't work but was immediately replaced) he remains delighted with his acquisition. Almost.

'My intention was to start some desktop publishing - I'd already bought Stop Press with the AMX mouse. But when I came to plug the mouse in the back, I found the expansion port was totally different to the one that should have been there', he said.

He also wanted to attach a modem to his PCW but of course the Amstrad CPS 8256 interface would not fit his Amstrad PCW 8512 either!

Where there should have been an edge connector there was now a fifty way centronics type D connector in a tasteful shade of blue. He contacted his suppliers, West of England Business Services who contacted their suppliers, Hugh Symons Associates.

The word came back to him

that his PCW had originated in West Germany, where, in order to comply with local electrical regulations, it had to have a proper connector fitted (it also had a standard 36 way Centronics connector for the PCW printer).

Further enquiries of AMX elicited the information that an adaptor would soon be available to connect the UK peripherals to the West German connector; but, said Amstrad, it would have to be paid for. 'I'm not happy about this at all,' said the Rev. Walker. 'If Amstrad change the specification, I don't see why I should have to pay to bring it up to standard.'

We spoke to Amstrad who asked for time to consider the questions we'd raised. They rang back two days later with a characteristically helpful and definite 'No comment'. However, according to one supplier who refused to be named, 'Amstrad have stopped manufacturing the 8512 but demand is such that they had to ship over a lot of German 8512s to cope. Maybe they think people won't notice.'

Hugh Symons Associates confirmed that a lot of Amstrad machinery now comes from West Germany and Amstrad told them that a 'dongle' will be available 'soon' to resolve the problem. But right now that's no use to Keith Walker. ■

Called Desktop Magic the designs include a range of cat and dog designs by June Windsor. Also included is a range of ninety designs for constructing trims and borders. Details and prices on 04867 81394. ■

Twenty four ours

Locomotive's long-awaited 24-pin printer drivers, enabling LocoScript 2 to print out on 24-pin printers all those different print styles, are now available. They can cope with all the LocoScript 2 character set —

Russian, Greek, Mathematical symbols, and all the extra fonts LocoFont provides.

Locomotive's Howard Fisher said 'we now cover just about every 24-pin printer on the market.' He said they were

looking into the possibility of marketing a printer themselves along with the drivers, though this might bump the price of £24.95 up a bit. Details from Locomotive on 0306 740606. ■

Engineering dept

SM Engineering, who produce a range of interface and signal conditioning products for the PCW, have continued to expand and have decided to celebrate by releasing a Z80 based controller board. The boards are particularly useful for one-off purposes such as assembly line checking and automatic data logging.

SM Engineering also produce stepper motor controllers for the PCW and will undertake prototyping of boards. Details from 0323 766262. ■

DTP goes to the dentist

The Desktop Publishing show was held in October. The chairman of the judging panel Michael Barnard claimed that DTP is 'rapidly transforming the world of communications in print — but is not without its own particular teething problems.' He didn't elucidate on the nature of the dental complaint.

One of the highlights of the

You can take it with you

If you own a Z88 and like joining things then the Z88 Users Club is for you. The club aims to offer a range of services to its members including a newsletter.

The newsletter will be called Z88 Epm (all the clever names having been taken by Future Publishing) and the sample cover we've seen suggests there are about 36 pages to be published six times a year. There will be an Epm erasure service at 50p plus return postage, liaison with Cambridge Computers, club discounts and a software library. Details from 68 Wellington Street, Long Eaton, Nottingham NG10 4NG. ■

Spray it again Sam

Everybody wants to be in the news pages of Britain's best selling PCW magazine so it came as no surprise to find a press release from Publicis-PR extolling the virtues of WD-40 for the environmentally conscious computer user.

WD-40 sprayed onto connectors and board edges will prevent the formation of resistive oxides that can lead to loss of low current signals. The board edges should first be cleaned with a shaped edge rubber eraser. Sticking keys can be freed up with a quick application of the wonder fluid as can any other moving parts (the cursor perhaps).

When you've done the computer you can do your revolving chair. WD-40 contains no fluorocarbons, no silicones and it also smells very technical. ■

Christmas parse

Topologika, producers of a range of adventure games and educational programs, such as Countdown to Doom, Return to Doom and Giantkiller have three new adventures in the final stages of programming. Avon, Quondam and Spycatcher are the ones to watch for. Release is 'imminent' — details from Topologika on 0733 244682. ■

It all adds up

Cornix Software have released an improved version of their accounting package for the PCW range of machines. Claimed to be as simple use as the original version released in 1985 the package offers immediate update on up to 12 accounts.

It also offers reports on any of the fund accounts and further search routines for in depth analysis and job costing. VAT is

handled at either the tax point or the cash point and in both cases the program provides all the information for standard VAT returns. Simple Accounts II costs £99.95 from Cornix Software on (0462) 682989. ■

Jobs for the boys

For those who think civilisation stops at Chelsea Bridge the South London Business Initiative have news. Backed by Mercury Asset Management (MAM) the SLBI have set up a Youth Enterprise Centre. The YEC seek to help people between 16 and 24 who wish to set up their own business. One of their recent success stories is VSE Technical Services, a personal micro repair service specialising in Spectrum, Amstrad and Atari machines. Already they are attracting business from Europe and even one machine from Australia. More information from YEC on 01 733 5570. ■

Contrasting words

Compumart are offering a range of mesh screen filters specifically manufactured to suit each of the Amstrad machines. Headaches resulting from difficulty in actually reading the screen are also too common (as are those resulting from reading the words on the screen.) Increasing screen contrast is achieved by preventing ambient light from reaching the screen and nylon mesh filters are particularly good at this.

Compumart hope to sell their screens for between £12 and £17 inclusive of VAT and each will be fitted with a colour co-ordinated plastic frame and continuous velcro strips for attachment. Their number is 0509 610444. ■

LocoScript leaves home

Graphic Point are offering to take your discs full of LocoScript files and convert them into a form suitable for the PC or Mac. This service, claims the bureau, will enable the original word processing material to be used for the most sophisticated DTP procedures without the delays and costs involved in rekeying the checking all the data. The service is not cheap, however.

'We can convert a full 180K or 720K Amstrad disc to a PC for £15.30 or £61.20 a time plus VAT,' said Chris Buckham, who runs Graphic Point. Putting all the information on to a Mac disc is only an additional £4.50 for the 180K or £18 for the 720K of information. 'Amstrad users need no longer feel locked into the straightjacket of their LocoScript software,' he stressed.

Since charges are based on file size smaller files will cost less down to a minimum of about £5. For your money you get a PC or MAC disc with your files on it in ASCII format. Graphic Point's number is 021 233 2905. ■

Something for nothing

Until the end of December 1988 computer users buying any of Accodata's new products from their Autumn collection of computer accessories launched in September will get 'something for nothing'.

This intriguing offer is available on the user's first new products order through all accredited Accodata product dealers and office stationers throughout the UK. Further info from 0732 885555. ■

show was the award ceremony and as in all the best industry specific shows almost everyone who submitted an entry got an award. They will not be listed here. The pertinent observation was made, however, that new technology is no substitute for good design and training. ■

The day Daniel's dad brought his office printer home.

My dad's firm is always busy so he has lots of LC-10 printers at his office.

In fact, he sometimes has so much work to do that he keeps a personal computer in his study so he can bring work home.

But when he's really busy, he brings home one of those Star printers too.

Of course, I know exactly how to use them because we have the colour version at school.

It can print documents in six different colours.

So I'm not surprised WHAT MICRO? called the LC-10 the 'Best Budget Dot Matrix Printer' on the market.

What's more it's a lot less expensive than other printers but much better quality.

(My friend, Philip, even has one for his Commodore.)

For a start the front control panel is child's play.

The six different fonts give you so many different style options when you print things.

It's pretty fast too with a draft elite speed of 144 cps and high density near letter quality at 36 cps.

There's also the LC-10's special feature called 'push-tractor' which gives the lowest tear-off position of the paper.

And you can park continuous paper and automatically load single sheets – and I think that's unique for this sort of printer.

You know, if I keep my paper round going for a few more weeks I'll soon have enough to buy my own LC-10.

And then for a small fee, dad can borrow mine.

OFF THE LEASH

Fun and games! Your PCW as a leisure machine

So we know you can use a PCW for word processing, that's what we all bought it for. And we know you can run databases and spreadsheets and handle your club accounts and run your company payroll and do a million other useful and sensible things.

But what about the leisure side of the machine? Look at any magazine for other home computers and you'll see pages on games reviews, graphics articles, MIDI

tutorials and other interesting things. Now the PCW can't really compete with an Amiga as a graphics workstation, nor with the Atari ST as a music computer. It hasn't got the range of cheapo games available that the Amstrad CPC has, nor the leisure utilities of the PC. Yet there's still plenty of inexpensive and so-serious software that will brighten up a lot of long winter evenings.

Simulation note

If playing Tomahawk gets you going, wander into your local arcade. Many games have simulator cabinets which not only display your view from the cockpit on a colour video screen, but as you fly through the combat territories, your seat moves under hydraulic rams to simulate the effects of climbing, diving, banking and even crashing! Afterburner, Powerdrift and Galaxy Force II are ones to look for.

Hardware

Great stocking fillers. 9512 owners suffer most from the need to replace ribbons so it's worth considering as a filler for them; not very exciting but always useful. It's a well documented fact that no PCW user ever has enough discs and these are always welcome. In the same vein a box of continuous paper makes a nice chunky present that will last all year. You could also consider disc boxes, printer stands, paper guides to allow accurate paper feeding or a screen filter.

Starting at a PCW screen waiting for inspiration is a bit like winter: not enough green and too much black. But you can brighten up those word processing screens and winter evenings in a variety of ways. Games, music, graphics, even programming... your PCW isn't just a writing workhorse, it can be a leisure tool as well.

You can tell Christmas is approaching because the shops are full of people complaining about commercialisation. PCW owners show peace and goodwill to all persons the whole twelve months of the year; but when it comes to buying a present for a friend who owns an Amstrad PCW, or for yourself, leisure software (or hardware) is ideal.

So here's the 8000 Plus roundup of what your PCW can do to entertain you. There's a directory of all the stuff mentioned at the end.

Games for a laugh

When the PCW was launched as a word processor three years ago everyone confidently assumed that no games would be written for it at all. Certainly the 'Mutant Frogs from Tharg' type would never be converted from their CPC or Spectrum format – not the sort of thing that would appeal to most PCW owners. But the idea of using a computer as entertainment has only recently been shaking off its trivial, shoot-the-alien image. Software houses soon caught on to the fact that PCW was perfectly capable of playing 'intellectual' games like Chess or Bridge – things which would certainly appeal to the average PCW owner. Soon adventures, flight simulators, sport programs and even the old arcade game began to appear. Now there are over a hundred games for the PCW, not bad for a machine that was never supposed to run anything but LocoScript!

Anyone who enjoys traditional board games like Scrabble, Chess or Backgammon can play excellent versions of them on their PCW, which can prove a very difficult opponent. The PCW conversions perform the impossible of outperforming the 'proper' games computers

with their colour monitors and blitter chips.

Which Chess program is the 'best' to play against is a constant bone of contention (among the producers, at least!) General opinion seems to be that Clock Chess '88 plays the strongest game, though any of the chess programs play a good club standard. All offer a variety of features like saving games to pick them up later on, printing out of the moves after, blindfold chess, Kriegspiel etc.

Colossus Bridge is a flexible program with Blackwood, Stayman and Baron conventions that will test a good player. It can also give advice. Bridge Player

2000 has tutorials and is probably better for the beginner.

You'll also find that the PCW is hard to beat at Scrabble, which on the top level turns out scores of 250-400 regularly. Its liking for very tight play means it tends to put down obscure short words like 'ka' and 'gju' and 'dzo' – if you have a Chambers dictionary you can find out what they mean though it's doubtful you could ever find a sensible situation to use them in.

Be adventurous

Those who like puzzles and 'thinking' games rather than shoot-'em-ups may well enjoy text adventures. In these you are a character in a scenario (for example, Arthur Dent in the Hitch Hiker's Guide to the Galaxy) often set in a dungeons-and-dragons atmosphere of Dark Ages magic and fantasy. You type in your movements and actions and the computer then tells you what happens to you as a result. The program understands simple pidgin English like take the skull then give skull to Hamlet or ask Hamlet about life but anything too complex is beyond the limits of comprehension of the 'parser'. Something like ask Hamlet whether 'tis nobler in the mind to suffer the slings and arrows of outrageous fortune or to take arms against a sea of troubles and, by opposing, and them would just elicit an 'I don't understand all this' response from the machine. Which

probably would be Hamlet's answer anyway.

Your usual options are to move in the directions of the compass which you do by typing n, sw, e and so on. You quickly get lost if you don't keep a map of your progress on a sheet of paper.

These games can have very frustrating situations to puzzle you way out of, but hint sheets are often supplied or available from the manufacturers. The fact that there's only one, correct, path you can tread through the adventure means once you've done it (which may take months) it's no longer any use. There aren't really any 'open-ended' PCW adventures where different things happen to you every time you play (ah, for a PCW version of the old classic 'Elite'...). Text adventures work well on the PCW, and quite a few games (Jinxter, the Pawn, Guild of Thieves, Mindfighter etc.) have a number of still illustrations on screen to go with the text. They aren't works of art but certainly make a game much more interesting to play.

The pick of the adventures tends to come from either Infocom (who have stopped distributing their titles - you'll have to get them from mail order places) Rainbird or Mandarin. The Hitch Hiker's Guide to the Galaxy is probably the best-selling adventure game for the PCW. Co-written by Douglas Adams (author of the radio play, the stage play, the TV series, the book, the book of the radio scripts etc. etc.) it has the same humour of the original and contains a lot of fiendishly difficult problems to overcome - you'll have fun trying to get the Babel fish. Perhaps just a bit old hat now, but still a very good game.

Fancy of flight

You can get flight simulators for the PCW (Strike Force Harrier or Tomahawk, for example) which show the controls and instrument panel of a plane or helicopter together with a 'view' from the cockpit as you fly around shooting things down. They're not easy to control at first and make you appreciate how difficult the real thing is! Tomahawk is now available for the 9512 and works with a joystick which makes moving rather easier than hitting keys like Q and W.

There are also 'traditional' shoot-'em-ups (shoots-'em-up? shoot-'ems-up?) and arcade games, more like the video games down your local amusement hall. The PCW screen, being designed to display text, limits what you can do enormously (none of your blitter chip nonsense here!) but it's amazing what skillful programming can do. Matchday II, the soccer game, gets surprisingly good graphics on the PCW screen and other visually stimulating games include Batman and Head over Heels. Sports fans can get soccer, cricket, golf, American football and even snooker.

An oddity is Tetris, a sort of animated fit-together-the-shapes test like those in the TV programme *The Krypton Factor*. It's computer gaming at its simplest, being a straightforward geometrical and rather abstract idea which is incredibly addictive. It was devised by a Russian computer programmer and is perhaps the first game to come from the East bloc to the West. (Versions on other machines have been evidently been converted by someone with a cynical sense of humour. As you progress through the levels of difficulty the background scenes change gradually from happy peasants in fields, through Red Square being buzzed by a light plane, to jet fighter battles with MiGs). The only annoying thing with it is that it beeps every time a brick lands, which quickly makes you unpopular. For a sneaky way to turn it off, see last month's Tipoffs.

Problems can occur if you're buying for a 9512 as some games don't work. Check with the dealer before buying which models the games work on: it's unlikely they will know, so you can try the makers, though it's probable they won't know either!

If you don't think much of existing adventure

Nail-biting action from which Hiker's Guide to the Galaxy

Aggravated game - Lancelot

Helicopter simulator Tomahawk

A blitter what you fancy

The Blitter is the part of a machine responsible for moving shapes around on screen, providing smooth animation in arcade games (the PCW doesn't have one). The term is loved by games magazines for its capacity for puns and definitions entitled 'The Blitter Eng'.

Scrabble

Tool kit

A mouse is a small hand-sized box on a trackball you run along your desk top. A cable connects to the PCW by a cable and as you move the mouse on the desk, the cursor moves on screen similarly. Making treasured drawing easier! A light pen connects to the PCW by a cable and enables you to draw lines on the screen by - well, by drawing on the screen with the pen.

FEATURE

The book of the program

A book is a good stocking filler. Any largish bookshop will have the odd LocoScript or BASIC tutorial book, and if they don't have a large technical section, they'll carry lists currently in publication for you to order.

For a really useful and fun present, how about a year's subscription to 8000 Plus?

Clock Chess 88

EMR's music studio editing screen.

Exotic Studio's Art package, on screen and printed out

games you can always write your own. 'Professional Adventure Writer' allows you to write your own games; you define a series of locations, objects and characters in the game, then tell it what response to give when the player does certain things with those objects in certain locations. Effectively you fill in the blanks of a standard game system with your own ideas. The end result will look like a professionally produced adventure with the same degree of sophistication in understanding the player's directions. You could try marketing it, though a good game takes the same amount of planning and hard work to write as a novel!

Graphics

Your PCW doesn't have to restrict itself to text handling. While artistic drawing is really beyond the capability of the printer, anything which would be described as a 'diagram' or 'map' can be prepared effectively on a PCW screen. Freehand lines can be added and are best done with a mouse or light pen. You can also add labelling text in various sizes and directions and fill areas with several patterns of cross-hatching, shading and dots. For simple technical drawing and mapping it can be a valuable tool, and is great fun too. Of course, 9512 owners need a dot matrix printer to be able to print anything out.

The advantages of doing graphics on disc quickly

An African Green laying the world's largest egg. It used to be called 'Happy'.

For the PCW owner with everything?

Forget your Rolex watches, Porsches and real Flottaxes. The latest in status symbols is the designer PCW, hand painted to your specifications. Instead of a dull grey you can have your computer painted to match your Docklands flat wallpaper, your favourite soccer team's colours or your nail varnish...

This is a highly exclusive service and will cost you. You can expect to pay about £150 per machine, and it takes a week or so (each coat needs at least twenty-four hours to dry properly). Of course you or the painter will have to take the casing off the rest of the machine before it goes near any paint!

There are no places doing this commercially, it's all down to you to find a designer or artist willing to do it. If you plan to have your keys painted in a dark colour it helps if you can touch-type!

UNHAPPY WITH YOUR PCW's PRINTER?

At last a high quality printer that's as flexible as LocoScript 2. With a 24 Pin Printer and the 24 Pin Printer Drivers Disc from Locomotive Software, you get really high quality printing of ALL LocoScript's characters, pitches etc – even on a PCW9512.

24 PIN PRINTERS ARE GOOD FOR 8000 OWNERS

With a PCW8256 or 8512 you can already print all of LocoScript's characters on the built-in matrix printer. With a 24 Pin Printer "High Quality" printing really will be High Quality! The built-in matrix has just 9 pins – a 24 pin printer not only has more pins, but they are closer together. This means that you get a better result. Most of these printers print in one sweep across the paper – which makes a 24 Pin Printer much faster as well.

24 PIN PRINTERS ARE GOOD FOR 9512 OWNERS TOO

The PCW9512's built-in printer gives good quality results but it is noisy and slow – and it can only produce a small range of characters. You cannot even mix upright and italic characters in the same document. A 24 Pin Printer and the 24 Pin Printer Drivers disc will give you the full range of characters (symbols, accents, Greek, even Cyrillic!), without sacrificing quality.

If you're thinking of getting a better printer, then how about a NEC P6 Plus. We think this is the best price/performance printer around and it's available from us at £549 + VAT. We'll also throw in a connecting cable and printer software FREE! Let us know if you've got an 8000 or a 9512 so we can send the right cable – and remember you'll need a CPS8256 Printer Interface if you have an 8256 or 8512. If your budget is tighter, then how about the NEC P2200 at £349 + VAT – not quite as fast or rugged as the P6, but still exceptional value.

If you've already got a 24 pin printer (such as an Amstrad LQ3500/ LQ5000, Epson LQ series, NEC P2200, P6 Plus or P7 Plus, or a Star NB24...) just add the 24 Pin Printer Drivers disc. For only £24.95 inc VAT you'll get more from your printer than ever before!

FEATURE

Cheap note

An inexpensive alternative allow normal add-on is the DKtronics sound interface, a box plugging into the back of the PCW enabling it to play three musical lines, though the manual is utter gobbledegook (programs to allow normal people to use it are available). Distributors RAM have deleted it from their catalogue but may have a few left for £39.95 each on 0252 850085.

become obvious. You can lay out straight lines, circles, rectangles etc. much more accurately and easily than by hand; you can store your maps on disc so that many different versions of the same map can be easily prepared by copying and amending.

Stop Press is a very powerful graphics program with a variety of powerful text handling features too; it can come packaged with a mouse and is a real pleasure to use. The Electric Studio's Art package gives a good range of features and can come with a light pen. MasterPaint is another good drawing package and very good value.

Many versions of BASIC include special commands to

draw lines, dots and other graphic effects; not so Mallard BASIC, the version on your PCW. However Lightning BASIC supplies these functions and a few other goodies like procedures to redraw screen characters to your own design, save screens to disc and so on. Great for BASIC dabblers.

For the real enthusiast a scanner or video digitiser to produce pictures for use in the programs is a must. MasterScan fits on the head of an 8512 or 8256 printer and scans anything you put in - text, maps, drawings or photographs. It converts the scanned object into a series of dots for use in any graphics program and stores it on disc. You can therefore scan anything you like and put it directly into one of your posters or newsletters, though the limits of resolution mean text or objects smaller than 8 point (the size of this text) come out rather fuzzy. A video digitiser does a similar thing with pictures 'grabbed' from a video tape. You can therefore include TV pictures or your own if you have access to a video camera.

The complete kit can be a bit on the dear side but nothing more than a drawing package is needed to start, and unlike most computer activities creating pictures or pages can appeal to all the family.

P.C.W. Bach

Music and the PCW don't go together; if you're serious about 'music processing' you'll have an Atari ST or suchlike. However, if you have a MIDI instrument - ie. one which can play through, and be played by, a computer - you can buy special software which lets you use your PCW like a recording studio, recording and editing (to some extent) lines of music independently just like different lines of text in a document. The result can be played back by the PCW through your MIDI instrument - a synthesiser, a guitar or even a saxophone! Individual lines can then be edited or re-recorded without affecting other simultaneous lines.

Two MIDI interfaces and software packages exist for the PCW, the DHCP sequencer and the rather more sophisticated Electro Music Research Pro-Performer - an essential for any synthesiser or MIDI musician who has a PCW. Both are performing and recording utilities and don't print or display anything in musical notation. Great fun and very useful to any music student - remember your synth or other instrument must be MIDI compatible though. ■

Watching programs

If some of your acquaintances are of the hardened hacker variety you'll be in no doubt about what they want for Christmas, they'll have been dropping subtle hints like, 'Don't forget, it's Maxam II from Amor: shall I write it down?'.

The PCW is an ideal machine for writing and running programs on. Leisure? Well, you may be surprised how addictive a leisure activity it can be. You could write games, or educational programs for your children, or even something serious like running your business. Writing programs gives you an insight into the way your mind and the world works and is immense fun (unless you do it professionally, in which case you spend your life writing tedious accounts handling routines).

The Locomotive BASIC manual is a good introduction to writing programs with the BASIC all PCW owners have free. You don't have to be clever or have any special training to start programming - just have a desire to experiment. Those who've dabbled already

might want to try a new, faster, language. Pascal is probably the best route to take. It tends to be the next step up after BASIC in educational circles. Certainly those familiar with BASIC will feel comfortable with Pascal - just as if you know any Latin (slow and methodical) you'll be able to understand a lot of Italian (which is much faster). For sheer interest and flexibility C is probably the best compiled language around though Pascal is easier.

The HiSoft implementations of any language are good for beginners, and those with some experience too. They come with good manuals, a program editor, they're fast and the prices are very reasonable.

A new language is a Christmas present that can last a lifetime (and that's just understanding the manual). But do get a manual on how to write the language at the same time: introductions to any language (not specifically for the PCW or any other machine) will be available from large bookshops.

Christmas list

All the details you need to drop really effective hints: what you want, how much it is, the name of the company, and their contact number. This is based purely on the prejudices of the 8000 team and we don't claim it's a list of the best - just the things we would most like to get for Christmas!

A lingering look at Letterheads and Logo

LETTA-HEAD PLUS**£17.50 • Bradway Software • 0433 30799**

Letta-Head Plus is a perky little program which enables you to design and print out cheerful made-to-measure headed stationery, labels, posters or badges.

Fourteen imaginative fonts which are all freely interchangeable within any one design are supplied on the disc. They can then be emboldened and/or italicised as you prefer. It's difficult to imagine a context not covered by one of them as the creators of the program seem to have hit upon the perfect blend of attractive design and practical readability.

Also supplied is a comprehensive font and icon editor which allows you to modify the

A USER'S GUIDE****£12.00 • CP Edwards • 0225 742098**

Logo is not a programming language with which personal computer users are generally all that familiar. In manuals where BASIC rules supreme, Logo is usually dismissed with very few pages of explanation. Yet there are those who see this language, originally developed in the late sixties as a program best suited to the thought processes of children, as having an enormous amount of potential.

Edwards is attempting to redress the balance. In his Logo user guide, he explores all of Logo's most characteristic features (the turtle graphics facility to name but one) and routines.

It's called an electronic book because it's supplied on a LocoScript disc ('for ease of production and access') in four versions: on two sides of an A: drive disc for the 8256 and one side of a B: drive disc for the 8512. Both versions come in either LocoScript 1 or 2.

Edwards makes the point quite early on that the guide has not been written for absolute beginners, only for those with a modicum of experience already. Throughout its 19 chapters he tries to answer any queries and allay any doubts that the Logo user might have when using any of the language's three types of Command, Procedure or Edit.

design of a character set or icon on a 16 by 16 grid, one square of which is the equivalent of an on-screen pixel. There are two different design menus depending on whether you want to create a heading or a label. Much of the hard work has already been done for you: when it comes to designing a label, you can select the size you're interested in (there's a choice of widths and heights) and a square will appear on screen in which you can start designing. You then select the font, the size of the characters and the style in which you want them to appear. The pen (or text-generating) cursor is a box the size of the character and can be moved anywhere in the label area using the ordinary cursor control keys.

The graphics options (available under [A]rt) are simple and adequate. Using the famous elastic box ('fix' the top left and bottom right-hand corner having first stretched or shrunk it to the required size) you can construct lines, circles and arcs and fill and shade. The art cursor is a very fine hairline cross which is great for accurate positioning. Unfortunately, [F]ill will only shade the area that can be 'seen' from the cursor position, which involves a lot of cursor-shunting and repeated [F] key presses.

The same is true of the Print menu. Once you've created the label or heading, you answer a series of questions about how many copies you want, the quality of the printout, what sort of paper you're using, and so on.

It's a pity that the documentation is not more lucid however because there are times when it's not all that commonsensical. Being told repeatedly to press the [ENTER] key when you should in fact be pressing [RETURN] is not all that helpful. Some things should be mentioned which aren't: for example, if you want to have a box around your final label printout, then you have to construct it with heavy line thickness at the design level. Otherwise the screen box is only a cosmetic guideline and will disappear as soon as you select the [Print] option. This said Letta-Head is a fun and versatile program to have around. ■

No Go Logo?

Logo was first developed as part of an American university project called 'Mathland' in the late sixties. It is now supplied free with the PCW when you buy it as DR LOGO - Digital Research's own implementation of the language for the PCW. It's argued though that the full potential of the language can only be realised on a much larger machine.

Chapter 5 explains all about list processing, the function for which Logo is famous whilst others analyse in detail many of the most commonly used primitives (the basic building blocks of the language). In Chapter 19, appropriately entitled Odds and Sods, Edwards takes a look at some that, despite all his efforts, remain shrouded in mystery.

The six appendices included at the end of the book provide very useful postscripts: the first, for example, consists of a thorough definition of the Logo keyboard and control code combinations whilst the third contains a Dec-Hex converter for easy reference at any time. Appendix 5 concentrates exclusively on matrix manipulation for which Logo with its list processing facilities is ideally suited. The sixth and final appendix, on the other hand, explores Logo's methods of data-handling and shows how everything in Logo can be viewed, stored and manipulated as a property list.

The guide costs £12.00 and will probably be worth every penny for the programmer foundering in a sea of Logo (50% of all profits go to Greenpeace). You have the listings already typed out on disc for you, but unfortunately the book suffers from the same shortcomings that any disc-bound user guide will have: you can't put it in your pocket and dip in and out of at will, for starters. Neither will you be able to consult any part of it if you've got Logo up and running on your PCW already (precisely when you are going to need it the most). Printing out the book is your only alternative. ■

8000 PLUS VALUE VERDICT 3/5

LocoScript 2 & LocoFile

THE PERFECT WAY TO ORGANISE YOUR HOME OR OFFICE

LocoScript 2 for the PCW8256/8512

LocoScript 2 is the faster word processor for your PCW, with a huge range of special characters, a choice of typestyles and many improved features.

LocoFile for the PCW9512/8512/8256

LocoFile is a NEW "pop-up" database for LocoScript 2. It's just like having a card index inside your PCW. Look up the information you want and simply PASTE it into your document.

LocoFont

Add LocoFont for a range of distinctive typestyles.

LocoMail

Add LocoMail to create mailshots, reports or invoices from your LocoFile database.

LocoSpell

Add LocoSpell to spot your typing and spelling errors – and correct them automatically

Callers welcome

BUNCH OF FIVE

Librarian, secretary and gadget fan John Hudson tells a tale of five computers

It all began in June 1983: I was first introduced to micro computers during the installation of BBC machines in various of our Gateshead libraries. I realised that a home computer would be an interesting thing to possess – although at that stage I was pretty vague on what I would actually use it for once acquired. On the grounds of cost alone, it was going to have to be a toss-up between the Oric-1 and the ZX Spectrum although the latter had a nasty rubber keyboard with a whole host of inhospitable functions lurking under every key. The Oric on the other hand had a keyboard that was almost like a proper typewriter's, plus a printer interface, a powerful sound chip and a whole 48k of memory; it seemed ideal.

I carted it home from Lasky's with a new cassette deck and a free four-pack of software, and for several weeks got absolutely no sleep as I stayed up night after night playing with it. The computer's limitations soon became apparent;

the manual was awful (now doesn't that sound familiar?) and BASIC had loads of bugs which made saving machine code or data files an exceedingly treacherous business. Worst of all there was no decent software! Yes, you couldn't fail to notice the sound generator and the Centronics interface was an impressive feature, but even the cheapest 'proper' printer then sold at £219, and there were no decent word processing or games programs. I soon got bored with working out my Life Expectancy from a listing published in Your Computer, the free flight game was pathetic compared to program demos on other machines in WH Smith's, and my chess prowess reached an all time low as I repeatedly failed to beat the computer on the most remedial level of play.

What could I do? Wait until I had some more money. I put up with it until the autumn of '84, as it became increasingly apparent that I would have been better off with a Spectrum. The documentation was so much more obliging, BASIC was much more user-friendly despite the keyboard, and there was a wealth of amazingly good software.

So the Spectrum became my second computer. The games were nice – particularly Psion's Scrabble, which has my vote at least for being the best computer game ever – but to use it for anything remotely serious, I needed a printer and a decent storage medium. By November I'd bought a ZX Expansion Pack comprising a serial/microdrive interface

and a microdrive: a system which relied on tape rather than disc, but crammed 85k of data into a loop of tape smaller than a matchbox. It was a very reliable medium for the price, and I can't remember ever having any files corrupted. This purchase was followed by a Saga keyboard and a printer – the ultra-sophisticated Brother HR-5, a battery-operated thermal transfer printer with a maximum speed of 30 cps, an enormous mains adaptor and an impressive range of Epson-compatible functions (as long as you didn't need NLQ).

Can I have a word

Obviously a good word processor was called for. Tasword 2 came free with the expansion pack and was very reliable, but only gave you 64 characters per line; not really good enough if you were printing in Elite. So I consulted the magazines and, on their recommendation, tried three more programs: OCP's Word Manager, SoftTechnic's The Writer, and Saga's The Last Word. Despite the glowing reviews they'd had, the first two were useless, full of bugs and basic design faults, and the publishers – particularly SoftTechnic – were no help at all. The Last Word was just the opposite, incredibly versatile for a Spectrum program, managing to cram Search and Replace, Block Copy and Move, Alarm Clock, Calculator and Word Count into around 20k of code. You had to write your own BASIC for headers and footers, but Nick Buckenham, the programmer, was extremely helpful.

Over the next couple of years, my involvement with the local amateur dramatic society, the Progressive Players, gradually increased. At the 1987 AGM, I volunteered to become Secretary. For a while I had been vaguely dissatisfied with the presentation of my letters and the print quality of the Brother – which, I was infuriated to see, had plummeted in price since I'd bought mine. The PCW 8256, on the other hand, looked like the answer to my prayers but at £460.00 was way out of the question until in August '87 I heard a price reduction was on the way. This, coupled with my increased need to produce high-quality letters, minutes and so on provided an excellent excuse for investing in one.

This was a real computer, obviously much more than a basic word processor. Once I had designed a few templates for official use, I could whizz off my work for the Company much faster and the presentation was vastly improved just by the better quality print. 8000 Plus had already come into my life, and was instrumental in showing me what the PCW could do. I decided a database would come in handy to catalogue my collection of videotapes, cassettes and records, particularly my Ravel's Boleros which now number 22 (honestly). Because these all have the same composer and title, I needed a database which could sort on at least three fields to take in the conductor and orchestra as well. At last! The bill admirably, and now I just have to key in the few hundred items which make up the rest of my collection.

Publish and be bankrupt

I needed a desktop publishing program to produce newsletters for the Progressive Players, so I bought Database Software's The Desktop Publisher. I found it a dependable and bug-free piece of software, but excruciatingly slow in use. The headlines were jagged and horrible and the graphics facilities painfully limited. I really needed a mouse, so why not go a bit further and buy Stop Press with it? It proved to be an impressive piece of

software, although initially suffering from a few bugs. Moving around the screen, producing headlines and generally shuffling round and revising pages was so much easier and faster than with The Desktop Publisher that I started to use the new package for producing various leaflets and handouts at work.

Judging by reviews in 8000 Plus and elsewhere, Mini Office was an essential package. The word processor was fast and it had excellent database, spreadsheet and comms modules as well. I was most interested in the spreadsheet. The reviews had failed to warn me about the bugs in the package (8000 was as guilty as the rest!) and the situation was particularly bad with Mini Office because of the sheer number of them. If we 'hardened users' who appreciate the value of computers can get frustrated and puzzled by programs that don't work properly, how will newcomers and 'non-computerate' people feel? To say nothing of the time wasted and important data lost. After six months of negotiation with Database Software, I was left with a relatively bug-free version, although I have to say that the comms module still doesn't work exactly as it should.

I have always admitted to the Progressive Publishers that I'm more interested in the presentation of the work I do for them than the actual content. So it was only natural that I would want LocoFont. As soon as 8000 announced its arrival, I was on the phone to Locomotive to order it, and I was not disappointed. Like all their other software it is a well thought-out usable package with some very attractive typefaces; I'm particularly fond of Roman and Copperplate. My only criticism is that the 'I' dot in the otherwise excellent Finesse font merges into the letter, so that it can't be distinguished from the 'l'.

Making a B line

With all this software it was time to get a B drive and cut down on all the disc swapping. I had prompt service from Silicon City and the installation was fiddly but otherwise straightforward. There was an initial hiccup when I thought the drive was faulty, but your correspondent Roger Greaves in Issue 15 was right; you do have to reset C/P/M if you're mixing single and double density discs in the drive.

In the past couple of weeks I've invested in LocoSpell, and have had great fun 'correcting' the names of our committee members: my alter ego is John Hubs, and we also have a Jibe Scoot and Loose Wrist!

My other two computers so far have been the Psion Organiser and the Cambridge Z88. The Psion did not for me live up to its promise of being a portable diary-cum-Flofax: the alarms were inaudible, the keypad was a joke, it was maddeningly easy to lock up the machine with a simple error in OPL, and you had an absurdly short time to change the battery considering the eccentric design of its compartment. I persevered with it for several months, but when it finally gave up the ghost and wiped out my data on its own, I ran out of patience and

Do you have a bad memory?

The only disappointment with the PCW was LocoScript's sluggish scrolling, particularly when writing a piece of fiction which might be ten pages or more. I remedied this by the purchase of LocoScript 2, which of course, was much better for long documents.

Or was it? When editing an eight-page chapter in the M drive, I was told the memory was full. I couldn't edit the edit and the only alternative was 'Cancel Operation', losing a couple of hours' work. The culprit was, of course, the size of the program itself. I felt, not unreasonably, that Locomotive's advertising had been a bit misleading here: they advertise LocoScript2 as being suitable

for long documents and, although they recommend the memory upgrade to make best use of the program, they forget to point out that it's an essential requirement for handling documents of any reasonable length.

It was clear that I was going to have to invest in a memory upgrade. In fear and trepidation, I opened up the cabinet, grasped my gas pipe repeatedly to discharge static, and plugged in my eight chips, sure that I was going to break a leg somewhere. But, amazingly enough, it worked. I now had 368k of space in Drive M and could get on with my nascent novel.

sent it back to Psion demanding a refund, which - to their credit - they gave me with no quibbles.

With a little extra outlay I bought myself a Z88, which has been wonderful for composing documents on the hoof and provides a much better Diary facility than the Psion.

How can he possibly afford all of this stuff, I hear you cry. It's simple really, I do without a lot of other things. Sometimes all my clothes seem to be remnants from the 1970s, and my kitchen floor is still bare concrete. ■

Notices

If we are trying to keep the bar large and well-stocked, but some people are printing out notices carelessly, so that they are either not straight, overlapping other notices, or placed in the middle of a blank space, and taking up far too much room. Please remember that people are far more likely to read the notices if it looks attractive, and that it is not our notice as well as our readers. So if you have any new notice, please do it up, please use as few lines as possible and if there is no room, please use as few lines as possible. If you have any notice, please use as few lines as possible. If you have any notice, please use as few lines as possible.

Bar Staff

Ever fancied working in a bar? We are looking for volunteers to work evenings. It's a good socialise, as well as a good way to make some money. If you think you are up to the task, please contact Louise Hatcher at 0254 222 222.

If you have any questions on this notice, please contact Louise Hatcher at 0254 222 222.

Welcome to RED HUGH LIBRARY

OPENING HOURS

MONDAYS 10am-7.30pm
TUESDAYS 10am-5pm
WEDNESDAYS 10am-5pm
THURSDAYS 1.30-7.30pm
FRIDAYS 10am-5pm
SATURDAYS Closed

OVERDUE CHARGES

If you have any books longer than three weeks overdue, we will charge you - currently £5 per day. If you have any books longer than three weeks overdue, we will charge you - currently £5 per day. If you have any books longer than three weeks overdue, we will charge you - currently £5 per day.

Reserving books

Did you know that the library can get you practically any book in the English language - on or off?

By RESERVING a book on charge you can get it before it is due for you, or you can get it on a card, but you have to wait to collect the book and the small three weeks to read it. If it is an old or obscure book, we will need as many details as possible, such as where you can be found if it is not here it might be. It can take time, but we have a happy return.

And there are also our other books for sale!

What else can the Library do?

Red Hugh Library can get you practically any book in the English language - on or off?

What is machine code? Simple. If something has a COM extension after it then it's machine code, and if it doesn't, it isn't. Programs with the COM extension can be run directly from the command line, (that's the A> at the left of the screen). Astute readers will have noticed that BASIC is actually BASIC.COM on the disc.

That's right, BASIC is a machine code program. In fact it's a program that takes a text file (ie. a listing) parses it (which means deciding just what each item in the listing means, whether it's a key word, a variable or more often a syntax error) and finally does something specific depending on what it finds (print a word to screen or whatever). Because there is a lot of work in interpreting the text into machine code before the BASIC program can do anything with it, everything slows down, and worse, BASIC has to re-interpret the line all over again if it reappears later on.

If that's a number my name is F1F1

Now we come to all those strange looking DATA statements. How do you find out which numbers to use? This is the main problem with understanding machine coding; it's necessary to know something about programming, quite a lot about the machine and the operating system, as well as learning a new language all at the same time. This often results in so much confusion that the attempt is abandoned. This month we'll go to introduce a few of the facts you'll need to know to get started, no programming yet.

Those DATA statements in the BASIC programs are just a way of representing a small machine code routine. It is possible to write a program entirely in machine code, nothing but numbers, but as this would be intolerably difficult, we use an *assembler* which works on a 'listing' consisting of mnemonics, such as those below, and turns them into a machine code file for us. The assembler supplied free with your PCW is MAC, so we will be using that.

Computers can be thought of as a lot of little switches being turned on and off at high speeds. These switches operate in banks of eight. Each switch represents one 'bit' and each group of eight represent one 'byte'. (If you've ever used SID to muck about with a program, each number you see on the middle table like 24 and 60 and 35 is one byte. A single character like A or * occupies one byte). Their configuration at any one moment always means something to the PCW though the meaning can change depending on the number that came before. In fact each byte can represent any number between zero and two hundred and fifty five (which is why there are 255 ASCII characters for example). How is this done?

Although each bit can only be turned on or off, so representing zero and one, by keeping the switches in bunches of eight and doubling the value of the column to left the values they can represent mount up quite quickly.

At the heart of the PCW is a thing resembling a fossilised centipede called a Microprocessor (to distinguish it from the box full of boards that computers once used to do the same job). The one in the PCW is known as a Z80A. The Z80A is a more powerful chip than the 8080 it replaced but it can carry out any instruction the 8080 can: this is a good thing as CP/M itself is written in 8080 machine code.

The PCW can store lots of numbers in its memory, but obviously these are useless unless you know where in the memory the number is stored - its address, or 'where it lives in memory lane'. Just like the Post Office, computers work in postcodes rather than intelligible English, so you end up giving instructions like 'get the number which lives at address 0D5F, add it to the number living at 3E42, and put the result in 109E'.

The numbers we've been talking about are presented to

ASSEMBLE AT DAWN

Steve Patient starts a new series: everything you wanted to know about machine code, but were afraid to ask...

If you've ever typed in one of our listings with a whole lot of DATA statements full of mixtures of letters and numbers tacked onto the end then you've already used machine code in your programming without realising it. Machine code is the only way to get at the parts of the machine that BASIC cannot reach, like the graphics screen to plot points or straight lines; also it runs a lot faster than BASIC. In a quickfire game or during a lot of text handling, this can be important. Writing machine code isn't easy, but it is straightforward - and you have all the tools needed to write it supplied free with your PCW. All you need is a few clues on how to write. Now read on...

Jargon buster

Some jargon to drop into a conversation you'd like to use:

- A BIT (short for Binary digit) is one switch, and can only be on or off.
- A NIBBLE is four bits and can hold values up to 0FH or 15
- A BYTE is eight bits and holds values up to FFH or 255
- A WORD is two bytes and holds values up to FFFFH or 65535
- A LONGWORD is four bytes and the numbers get silly, 2 to the power 31
- RAM Random access memory

ROM Random access memory that can't be written to
MNEMONIC Name given to machine code instruction eg. LDA, XOR etc
TPA Transient Program Area. Where COM files live
BDOS Basic Disc Operating System. (Nothing to do with BASIC language)
BIOS Basic Input/Output System
CHIP Long piece of potato with square cross section
REGISTER a location inside the Z80 where bytes are held and manipulated.

the Z80A on eight of its many legs simultaneously. The first number in any program is taken as an instruction to do something. Some instructions need data immediately, a number or an address for example, and these are stored in line with the code. An instruction that needs two bytes of data would be followed by two bytes of data and the microprocessor would expect the third byte to be the next instruction.

These instructions are of several kinds; instructions to load a byte or a word, save a byte or a word, add or subtract bytes; they can be logical instructions like AND, OR, XOR. There are instructions that shift bits right and left. The 8080 instruction set are listed and at some point we'll use one or two of them. Not yet though.

Light MAC

A typical instruction in machine code is CALL 0005H, which asks CP/M to do something (exactly what depends on how you've set things up). The H after a number means it's hex - see the box. This translates into CDH 05H 00H in machine code. Seems simple enough, you say, why do I need it in

Classic and classy

The programming utilities supplied with the PCW only handle 8080 mnemonics and don't understand the extended Z80 instruction set. On the other hand they are free. On top of that they remain some of the most powerful programming tools around. This does not include ED COM.

If you feel an overpowering urge to work with code you will need a decent text editor: not a word processor. Although having said that Protext works fast enough to use from drive M. A very nice full screen text editor will be on our forthcoming disc offer. See special offers

MACHINE CODE

Hex rated stuff

Hex is another way of counting beloved by programmers. In it you count 0, 1, 2, ..., 8, 9, A, B, ..., E, F, 10, 11 and so on. 'C' is thus pronounced 'twelve' and '12' as 'eighteen'. Binary is yet another.

BINARY REAL HEX
LIFE

```
00000000 0 00H
00000001 1 01H
00000010 2 02H
00000011 3 03H
00000100 4 04H
00000101 5 05H
00000110 6 06H
00000111 7 07H
00001000 8 08H
00001001 9 09H
00001010 10 0AH
00001011 11 0BH
00001100 12 0CH
00001101 13 0DH
00001110 14 0EH
00001111 15 0FH
00010000 16 10H
00010001 17 11H
00010010 18 12H
00010011 19 13H
and so on!
```

Hex and backwards? Well, think of the postcode business. An address like 'North Ferriby, Yorkshire' doesn't give you much clue where it is, but the postcode 'HU14 3LE' pins it down to near Hull (HU) then a specific area (14) then a road (3) etc. down to an individual house (almost). The postcode suits the way the Post Office section up the country; similarly, hex suits the way computers store numbers.

The Z80A stores numbers from the top of memory down. This seems a bit back to front to us, or at least to me. A two byte number will be stored with the LSB (Least Significant Byte), at a lower address than the MSB (Most significant byte). It's like having the postcode above as '3LE HU14'.

Think of an address which in English would be 9073 - very hard to translate into binary, and even harder to imagine stored in memory, but given 2371H, its hex

equivalent, we will know that the LSB is 71H and the HSB is 23H. They would appear in a data statement as 71H, 23H, in that order. In fact the list of DATA statements is nothing more than a snapshot of the machine's memory.

By looking at the list of binary numbers in the box you can see that the pattern of bits in memory will be 7, 1, 2, 3 - ie. 00000111 00000001 00000010 00000011. Each hexadecimal number in the DATA statements represents a specific memory location and the pattern it holds. By using hexadecimal numbers we need only worry about sixteen patterns that map exactly onto the bytes in memory and suit the physical layout of the memory nuclei. Once you begin working in machine code this ability to see at a glance exactly what each memory location holds is so useful that learning hexadecimal is a small price to pay.

The 8080 Instruction Set

This is a reference table you'll be coming back to a lot. It's the complete list of instructions in 8080 language, the one we'll be using. It'll mean nothing yet, but don't worry - it's only for lookup later on. If you can photocopy it do so and put it up on your

Load and save instructions

```
LDAX rp    load A from the address in BC or DE
LDA aaaa   load A from address
LHLD aaaa  load HL from address
LXI rp,nnn load register pair with address (any 16 bit number)
MOV r,r    move one register from another
MVI r,nn  load register immediate
SHLD aaaa  load address with bytes held in HL
IN nn     load A with byte from port p
OUT nn    send byte in A to port
PUSH rp    put copy of register pair onto stack
POP rp     take top of stack and put in register pair
SPHL      load stack pointer with HL
STA aaaa   store A at address
STAX rp    load address in BC or DE with A
XCHG      swap HL and DE
XTHL      swap stack address with HL
```

Call instructions

```
CALL aaaa  call subroutine at address
CC aaaa    call if carry set
CM aaaa    call if sign negative
CP aaaa    call if sign positive
CNC aaaa   call if carry clear
CNZ aaaa   call if zero flag set
CZ aaaa    call if zero flag set
CPO aaaa   call if parity odd
CPE aaaa   call if parity even
```

Jump instructions

```
JMP aaaa   jump to subroutine
JZ aaaa     jump if zero
JNZ aaaa    jump if not zero
```

bedroom wall.

The diagram below is of the Z80 registers, again for reference later. We will only be using the main register set, the program counter and the stack pointer.

```
JPE aaaa   jump if parity even
JPO aaaa   jump if parity odd
JCA aaaa   jump if carry set
JNC aaaa   jump if carry clear
JM aaaa    jump if sign negative
PCHL       jump to address in HL swaps HL and PC
```

Return instructions

```
RET        return from subroutine
RC         return if carry set
RNC        return if carry clear
RNZ        return if not zero
RZ         return if zero
RNZ        return if not zero
RM         return if sign negative
RP         return if sign positive
RPE        return if parity even
RPO        return if parity odd
```

Mathematical instructions

```
ACI nn     add immediate to A with carry
ADI nn     add immediate to A with no carry
ADC r      add to A from register with carry
ADD r      add to A from register with no carry
SUB r      subtract register from A
SUI nn     subtract immediate from A
DAD rp     add contents of BC or DE to HL - result in HL
SBB r      subtract contents of register and carry from A
SBI nn     subtract immediate and carry from A
DCR r      decrement register
INR r      increment register
DCX rp     decrement register pair
INX rp     increment register pair
```

Bit level operations

```
ANA r      AND A with register-result in A
ANI nn     AND A immediate - result in A
CMA        complement number in A
CMC        complement carry flag
STC        set carry flag
DAA        decimal adjust A - BCD arithmetic
ORA r      OR accumulator with register
ORI nn     OR immediate
XRA r      XOR register with A
XRI nn     XOR immediate
CMP r      compare A with register
CPI nn     compare immediate
RAL        rotate A and carry left
RLC        rotate A left bit 7 to carry
RAR        rotate A and carry right
RRC        rotate A right - bit 0 into carry
```

Miscellaneous

```
RST nn     a kind of jump - 1,2,3,4,5,6,7,
DI         disable interrupts
EI         enable interrupts
HLT        stops the Z80A
NOP        no operation - dummy instruction
```

THE BEST FROM THE PUBLIC DOMAIN

The following discs contain tried & tested software from the public domain, tailored for Amstrad PCW computers running PCW Plus. Each disc has MENU selection, sort, directory and full documentation.

TEXT EDITING & DATABASES ONLY £29.00 per disc

1 TEXT EDITOR Easy to use full screen ASCII editor with automatic word-wrap, page breaks, printer control - Ideal for compiler source code.
2 DATABASE A relational database for storing simple data and producing reports and forms letters. Free formal query language with macros and commands. Features on-line help. Also contains an Inventory Database.
3 FIXED ASSETS LOG Record up to 350 items and their life. For home inventory, insurance, stocktaking control. Forms management and sort routine.
4 VIDEO CLERK Track your video collection. This database system features 4 sort routines and forms management plus extensive documentation.

Join the Advantage Independent Computer User Group and get a further £1 off every item in this advertisement (2 off High Level Language compilers) plus monthly Newsletter and support.
Annual Membership is just £12 (UK) £15 (Europe) £18 (Rest of World)

SPECIALIST APPLICATION ONLY £5.00 per disc

1 COMMUNICATIONS Now featuring Videopac, Prestel & Terminal Emulation Plus UK Modem 7, Kermit & MUX
2 PCW DISASTER Appointments calendar, calculator, memo-pad, cardfile database, Label printer, home accounts, mortgage calculator, weather forecaster
3 PCW GRAPHICS Useful Drawing Program, Screen Font Designer, Ready-to-use FONTS, Diagram - A fascinating graphic demo of natural selection
4 STD CODES All the UK codes in NUMERIC order with corresponding exchange names

USEFUL UTILITIES ONLY £5.00 per disc

1 COMPLEAT UTILITIES The famous NSWEP disc manager, Supermag sector file editor, Unerase, DISKITA for 1784 C32 format, SILEX second drive screen dump etc
2 TEXT PROCESSING UTILITIES Sideways prints text (eg spreadsheet) on its side. Alphabetic sort, Word Count, WSC can convert WFF file to ASCII, Simple Spelling Checker, Score Card Generator, Banner printers, Typewriter Emulation - Restore to Art
3 DISC ORGANIZATION Catalogue your disc collection and produce a printed index. File Finders, Archive programs, Squares - save disc space.

PROGRAMMING ONLY £5.00 per disc

1 THE 280 PROGRAMMER Z80 Assembler/Disassembler, Z80 Debugger, Z80 Libraries, Z80 - 8080 translators
2 THE SMALL C PROGRAMMER Includes source code. Produces executable machine code programs.
3 C TUTORIAL See how other programmers do it with this useful set of C Source code programs. Disc includes the executable programs

PROGRAMS FOR PLEASURE ONLY £5.00 per disc

1 GAMES COMPENDIUM Pacman, Snake Game, Polish Pong, Chess, Othello, Mastermind, Spillit, Awar, Life, Golf, Maze, Bishytime, Word Search Puzzle Maker, Tic-Tac-Toe to all written in machine code.
2 ADVENTURES The famous Colossal Cave Adventure plus Bestiar - Return to Art
3 AMUSEMENTS & DIVERSIONS 29 games which run on PCW. Malard BASIC, Startrek, Whichword, Lander, 3D Tic-Tac-Toe, Merchand, Othello, Hangman, Baseball, Civil War, American Football, Maze, Nim Horace Rares, Backjack Spies Crazy-8.

Farmers
Colleges

Clubs
Charities
Etc. etc!

MONEY MANAGER PLUS is an easy to use powerful accounting system. It will enable you to record and analyse all your financial transactions, so that you know exactly where you stand and can make sensible and informed financial decisions. Check bank statements, monitor cash flow, analyse sources of income and expenditure, make budget forecasts, prepare financial statements. Keep one step ahead of your bank manager, convince tax or VAT inspectors, avoid nasty surprises!

MONEY MANAGER PLUS is very much easier and faster to use than ordinary systems. It has several reporting, analysing and graphic facilities not available in even the most expensive accounting systems. It would take you months of effort with a sophisticated database/spreadsheets/graphics package to achieve half of what MONEY MANAGER PLUS can. Whether you run a substantial business or just need to sort out your personal finances, MONEY MANAGER PLUS can help you.

To run the system you just switch on, load MONEY MANAGER PLUS, and select a data file to be loaded from your disc into the system. You can produce new entries in any order that suits you (or amend existing entries). You can reconcile entries against bank statements received. You can answer any questions you might have about your current financial situation. You then save the data file for the next time you need to use it. You may have any number of separate data files (or sets of accounts) covering several years, and store several on one disc. When required, a 12-month data file can be rolled forward by a month at a time.

- 12 months accounts per file, 300 entries per month
- Up to 9 user-defined accounts (banks, cash, credit cards etc)
- Up to 50 user-defined classes of income/expenditure
- Optional reference (up to 6 characters) for each entry
- Your own descriptive text (up to 18 characters) for each entry
- Optional extra label in each entry to allow further selectivity
- Fast and easy data entry - like filling out a bank statement
- Correct incorrect entries at any time
- Standing orders/standing entries
- Sort entries into date order when required
- Detailed statements for any range of months
- VAT reports in detail and in VAT return format
- Monthly reports for each class of transaction
- Reports showing activity in each account

- Consolidated class group reports
- Account balances month by month
- Bar charts for up to three categories of entry
- Pie charts for up to 12 categories of entry (PC)
- Facility to search through accounts for lost items
- Total monthly income, expenditure and cash flow
- Account and class totals
- Bank statement reconciliation
- Budget cash flow forecasts
- Automatic creation of data file back up copies
- Print all reports
- Comprehensive manual
- Two sets of practice data
- Free telephone support

For mail order, send a cheque for £39.95, or phone quoting an Access, Visa or American Express card number, and the program will be mailed to you within one working day. Please specify model of computer! Mon-Sun 8AM-10PM

Connect Systems 3 Flanchford Road, London W12 9ND. Tel.: 01-743 9792

ULTIMATE QUIZ

£14.95 inc VAT (full version)

● David Greenhough Computing
(0274 640764) ● All PCWs

Ultimate Quiz was originally intended as an educational aid for school-age children. But since it also incorporates an editing file, so that the quiz can be updated with questions of your own devising, it seems reasonable to suppose that it can also provide hours of general knowledge fun for players of any age or occupation.

Ultimate Quiz is surprisingly versatile in that it can be played by anything up to eight players. There are basically two quiz games available on the disc: one file, GENERAL QUIZ, offers a seemingly endless supply of Trivial Pursuits style multiple choice questions. Few of them are obvious and your answering keypress is rarely a confident one. As always the knowledge can be a little artificial and often begs more questions ('In which year was the pedestrian crossing introduced' - to whom? 'When was the first football World Cup' - when was the first World Cup what? Held? Lost? Won?)

The second quiz supplied on the review copy is based on the various facts and figures to be found in the Highway Code. Apart from helping you brush up on your driving skills, or providing a slightly out of the ordinary way of committing facts to memory for those with driving tests pending, its main purpose is probably as a demonstration of a subject-specific application. Still, handy if you have a PCW running through your car lighter.

Whichever of the quizzes you select, you have the choice of playing it either with or without a noughts and crosses program.

Time is a spice

At the start of each game, you're given the option of selecting a timer for each question you answer just to spice it all up a bit. Playing noughts and crosses with the timer set to 5 and the level of difficulty on 4 might just convince you that it isn't necessarily all kids' stuff. To avoid questions being repeated (and this is where a lot of rival programs fall down) the program will keep a record of the ones which have been asked. Only if the quiz is played really long and hard will some of the questions start to provoke déjà-vu.

Another of the program's major strengths lies in its Edit program which allows you to devise your own quiz files. It's quite easy to do. You can therefore adapt it and make quizzes to test your children on Chemistry or Maths or whatever, giving them the chance to learn even more useless knowledge. You enter your questions on a set format of question-plus-three-multiple-choice alternatives. The minimum number allowed is 11, the maximum 100. Although the quiz program will instantly reject any file with less than 11 questions in it, the Edit program allows you to save a file with less than that ready for adding to another day.

SUPERMATHS

£16.95 ● Abacus Software (0689 36293)

● All PCWs

One of the great misconceptions about mathematics is that it involves numbers: that's arithmetic. As any undergraduate could tell you, the further you go in maths, the fewer numbers you see. Primary school students can count up to a thousand; secondary students only go up to a hundred and replace awkward numbers by x and y . In A-levels a to z are all used up and Greek letters are commandeered to replace all numbers except 0, 1 and infinity. By University, clever students doing set theory can make you doubt that numbers exist at all, and that they're just an accountants' fiction to

A QUIZZICAL LOOK AT...

Who wrote this review - was it a) The Moderator of the Church of Scotland b) ex-King Zog of Albania or c) Sharon Bradley?

Why are people so interested in testing their knowledge of trivia? (That was a rhetorical question). With the Christmas market clearly in mind, three new quiz-oriented packages are now out to keep you and your family educated and amused on Boxing Day afternoon. How do they perform? (answers below).

keep them in work. Which is why most mathematicians become accountants.

However, numeracy is always a Good Thing to be Encouraged, and Supermaths is a new educational program which has been written specifically for the Amstrad PCW series of machines. Its aim is to improve basic numeracy - whatever the age of the user - although it will probably be of the most benefit to school-going PCW users.

The program covers the four basic arithmetic operations of addition, subtraction, multiplication (you can specify exactly which table you want to tackle) and division. There are four levels of difficulty: you can choose whether you want to carry out the various operations using just units, tens, tens and units or finally, at the most advanced level, hundreds tens and units.

The questions are presented in quick-fire volleys of ten, so the better your mental arithmetic the faster you'll get through it. (There's no time limit, though, on answering the questions; the only thing that's likely to put you off is having somebody standing behind you watching). If your mental arithmetic is a bit dodgy, you may always use the program for

Ultimate Quiz

QUIZZES

Easy Games

calculator practice. If you get all ten questions right, you'll be presented with a chirpy smiling face of encouragement and the option of continuing with another ten questions along the same lines or returning to the main menu to choose either a different level or a different operation. After a series of five happy faces, you get an owl – the highest accolade the program offers – although by that stage you'd probably be better off moving up to the next level of difficulty. A few more interesting graphics would have been nice to keep the attention of the younger children. Scores are automatically recorded on returning to the opening menu.

Test of time

You can also use the program in Test mode which involves telling the computer how long you want the test to go on for in minutes. The creators must have thought that a whole hour of Supermaths would be straining the bounds of human endeavour a little too much and wisely fixed a maximum time limit of just 60 minutes. The program also offers a highly original Worksheet mode, which enables you to produce worksheets on the dot matrix printer in one of two

styles: either a problem a line or problems set down the page. All you have to do is select the operation and the level of difficulty. You can print out several copies of the same sheet or alternatively several sheets of different problems using the same operation and degree of difficulty.

Supermaths can provide hours of competitive fun with family and friends vying with one another, on different levels, to achieve the highest score. Above all, its great strength lies in its simplicity: it has successfully avoided falling into the trap of losing sight of its objectives by trying to be too clever. Supermaths won't transform a mathematicophobe into an overnight Karl Gauss, but what it will do perfectly – until the cows come home if you like – is exercise basic numeracy skills.

EASY GAMES

£14.95 • Tyresoft Software (0602 728981)

• All PCWs

Easy Games is a collection of three games on disc which have been created to appeal to children between the ages of seven and fourteen. That's not to say, however, that the games included – a Trivia Quiz, Draughts and Puzzles – won't be attracting any adult interest. Some of them are quite compelling.

The Trivia Quiz incorporated on the disc was first reviewed in our July issue (#22, page 22). Again, you have three lives and a time limit in which to answer as many multiple choice questions as possible. By adult standards, they're not particularly heavyweight but quite good fun nonetheless: still, there can't possibly be that many kids out there who really think that the name of Dick Turpin's equine partner in crime was Red Rum or that J. R. Ewing wrote *The Lord of the Rings* – or can there? You're still allowed to commit three incredibly silly answers to screen (gaffs being represented by the eternal trilly knickers in the top left hand corner of the screen); as before, if your score is deemed to be remotely respectable then the program will ask your name and record it alongside those of some of the greatest intellects of our time, to wit Frank Bruno and a cat called Betty.

Draughts is quite good fun as well although double and triple jumps (the trademark of an exciting game of Draughts) are unfortunately very much frowned upon by the program, i.e. not allowed. You play against the computer and the moves are made using the cursor and [ENTER] key respectively. You also have the option of playing a three, two or one-line game, which, as it suggests, means that each side (the computer is always black incidentally) begins the game with three, two or maybe only even one line of draughts. You can also get a demonstration game going if you like before you start to see just how the game's played although ample instructions are provided as soon as you select the game.

The third set of puzzles involves reassembling various pictures by moving a space around a grid. Depending on how hard you want to work at it, you can ask the program to shuffle the picture in such a way that it is either very easy or marginally more difficult to reassemble them correctly. If the puzzle is in imminent danger of being unravelled, you can always hit the [M] or [E] button to juggle the picture up some more.

The only snag with Easy Games is that the challenge value, not to mention the appeal, may start to flag as various questions, answers, moves and shuffles start to look familiar. Easy Games is basically good fun and quite compelling for the young PCW operator because of its very nicely done graphics; it's a shame its creators don't seem to have found a way of safeguarding the program's long-term interest. ■

ULTIMATE QUIZ

PLUSES

- ▲ Can add questions of your own
- ▲ Up to eight can play
- ▲ Questions are challenging

MINUSES

- ▼ Some questions rather esoteric

8000 PLUS VALUE VERDICT 4/5

SUPERMATHS

PLUSES

- ▲ Efficient scoring method
- ▲ Practice and test modes
- ▲ Can produce own worksheets

MINUSES

- ▼ Numeracy rather basic

8000 PLUS VALUE VERDICT 3/5

EASY GAMES

PLUSES

- ▲ Easy to use and good fun
- ▲ Nice graphics to appeal to younger users
- ▲ A versatile program with three different types of games

MINUSES

- ▼ No long term appeal
- ▼ No save facility in draughts game

WIKY OF SUM

The Mini Office series part 9: more on the spreadsheet

If you read last month's article you'll know what a spreadsheet is, what it's for and why it's a Good Thing. (You'll also know how much it will cost you to produce your own desktop publications). So here are a few more of the functions available in Mini Office to make setting up and using a spreadsheet easy...

Change? Cursor can

You can change the direction the cursor moves after you enter something in a cell. Press [ALT]: a few times and at the top of the screen you see various messages: Up, Right and so on. This tells you the direction the cursor moves in after each entry. If you have a long column of figures to enter, you obviously make it 'Down'. If you're moving around in various directions, stop it moving, displayed as a blank at the top of the screen

Get it from...

Mini Office is available from Database (0625 878898) for £29.95 and a bit cheaper from various mail order places (if like us!). A good tutorial book (if you don't like the manual is by John Hughes from Sigma Press (0625 531035) for £11.95

Moving around

You can move about a spreadsheet by using the cursors, naturally, but in large sheets you'll want to go around a lot. Pressing [ALT]: followed by a cell number - A1, Z54, AD176, CW308 and so on - moves you straight there

Last month highlighted the fine-tuning power of a spreadsheet - to juggle complex sets of interrelated figures to produce the most efficient result (in that case, working out how much to charge for your parish magazine).

Spreadsheet manuals usually give you examples like doing your household accounts. Fine, except that household accounts are done much quicker with a calculator than a spreadsheet. What spreadsheets are really good at is preparing tables of figures - for example, conversion tables.

Imagine the work involved in preparing a ready reckoner conversion table such as pounds sterling to Deutschmarks - for your restaurant which has a lot of German guests, perhaps. Straightforward, but tedious in the extreme. And whenever the exchange rate changes, the entire table must be recalculated. With a spreadsheet, very easy - of course the steps here are roughly the same for any type of tables such as imperial to metric converters, price lists and so on.

Type office and select the spreadsheet as usual from the main menu. Taking 'Edit spreadsheet' gives you a new blank screen. Type the title Pounds to Deutschmarks Ready Reckoner or whatever and put the current exchange rate in a cell somewhere (say cell D2) the idea being that if you only refer to the exchange rate by this cell number in your calculations, you can come back and change the figure in the cell when the rate changes and your table will be automatically updated.

You want a printout looking like a ready reckoner, with pounds down the left and pence across the top, like this:

	Pence			
£	0.00	0.10	0.30	0.40...
0	0.00	0.31	0.62	0.94 1.25
1	3.12	3.43	3.74	4.06 4.37
2	6.24	6.55	6.86	7.18 7.49

etc.

To get, say, the Dm equivalent of £2.20, you go down the left £ column to the 2, then go across to the 20p column. The figure there is 6.86, so £2.20=Dm6.86.

So, put 'pence' and '£' as headings. In the £ column you can justify everything right instead of left with [ALT]: it looks neater. (Another thing to do is to have no decimal places showing instead of the usual two. Press [ALT]: the left cursor twice, then [ENTER]).

Now you could type in the 'pence' headings across the page in adjacent cells, 0.00, 0.10...0.80, 0.90. These are all

displayed to two decimal places which is what you want for money, though you can change it as above. However, you can experiment with the copying facility. Enter 0 in the first heading cell, which is C5 say. Then move to the next on the right, ie. D5, and press [F5] to tell Mini Office you want to put a formula in here: whatever is in C5 plus 0.1. Give the formula as C5+0.1.

Fair copy

So why not just enter 0.1 as a number? Well, you can now copy this formula to the rest of the cells in that row. With the cursor still on D5, the cell with the formula, press [COPY] and select 'S' for Single cell copy. A prompt line at the top tells you to move the cursor to the destination of the copy of this cell. Move one to the right to E5 and press R for relative copy.

You'll see the formula in cell E5 displayed at the top of the screen as D5+0.1 - the original was of course C5+0.1, but Mini Office has copied 'relatively', ie. it's taken the previous formula to mean 'take the number in the cell on my left and add 0.1' and so translated to have the same effect for its new cell.

You can keep copying along the row by pressing the right cursor and R continually (until you get to 0.9 of course). Press [CAN][ENTER] to finish and cursor back to the beginning. You should have the figures 0.0, 0.1...0.8, 0.9 displayed.

Absolute copying is where the contents of a cell are copied exactly - in the above example, if you'd copied the row absolutely instead of relatively, instead of 0.0, 0.1, 0.2 etc. you'd have 0.0, 0.1, 0.1, 0.1... with each cell after 0.0 containing C5+0.1, ie. 0.1.

Put a zero in the top of the £ column (so this one is B6) and then move right (ie. to C6). Clearly £0.00 is Dm0.00, but you want to put a formula here to calculate the Dm figure so that you can duplicate it later.

You know that figures in this column are whole pounds, so the Dm equivalent is just the number of pounds (as displayed in the cell to the left) times the exchange rate (which was put in cell D2, remember). So, in cell C6, press [F5] for formula and enter B6*D2.

Relatively speaking

Now, as you go along rightwards from here, you add ten pence per column to the £ amount. So, if you move right to cell D6 and enter the formula C6+0.1*D2 you're telling Mini Office to take the contents of the column on the left and add the Deutschmark equivalent of ten pence (£0.1 times the exchange rate, which is in D2). Now you can copy relatively like you did above for the rest of that row... except that if you try it the figures will be wrong.

The reason is that in copying the formula relatively, the D2 in the formula (the cell holding the exchange rate) becomes E2, F2, G2 and so on. These cells have nothing in them so the 'exchange rate' for these copies becomes zero, knocking out the figures.

You can't copy absolutely, because then every cell will have exactly the same amount in it as the one it was copied from. What you want is to have the C6 bit copied relatively but the D2 bit constant, ie. copied absolutely.

Mini Office lets you do this by putting a 'f' in front of the D2. Enter the formula in D6 as C6+0.1*fD2 and when you copy this relatively to the right you'll see it becomes D6+0.1*fD2, E6+0.1*fD2 and so on. Which is what you want, so you can continue copying to the end of the line.

Now you have the first row done you're almost finished. Copy the row 6 ([COPY]), then 'R' for row, cursor down, then 'R' for relative) to the one below. It'll be right except for the entry in the £ column, which is zero. What you want is 'the number above this plus one', so enter this cell (it should be B7), press [F5] for formula and enter B6+1.

Copying a row

After updating the figures with [F3]

The formula for cell D6

Selecting sideways printing

Now copy this row 7 relatively to the next down and continue downwards ad nauseam. To avoid waiting for all the figures to be recalculated every time you do anything, you can press [ALT]␣. This turns off this auto-updating and puts the phrase [Func] in every cell with a formula. You can carry out your copying much quicker this way, though it's easy to get lost with lots of [Func]s around. To force an update, press [F3] and all the figures are recalculated. To return to auto-recalculation press [ALT]␣ again.

Your conversion table is now ready for printing out – you can check quickly that it's OK by looking at a few obvious figures (£10, £100 etc) and making sure all the figures in between go out steadily.

Save it either by [ALT]␣ or [EXIT], 'Load/Save' will 'Save data'. You can enter a new name for the file (the ending must be .SPR) or accept the one given by pressing [ENTER]. [EXIT] gets you back to the Spreadsheet menu and you can continue editing the sheet ('Edit') or wipe it clean and start again (from Spreadsheet menu 'Alter spreadsheet', then 'Wipe', [EXIT], then 'Edit').

Loading a spreadsheet is done in the same way to saving except you 'Load data' instead of 'Save data'. You can select the file to load by putting the cursor over the right name on the directory which appears and [ENTER]ing. Once done you [EXIT] twice to the main spreadsheet menu and 'Edit'.

Sideways printing on an 8000 printer

Functional analysis

Mini Office has a variety of useful functions you can put in formulae. SUM (A3:F3) will calculate the sum of all the cells in row 3 from A to F inclusive. SUM (BAl:BAl57) will do the same for cells in column BA from 1 to 187 inclusive, and SUM (A1:D3) will total all the figures in columns A to D and rows 1 to 3 inclusive.

With the same options for the range of cells you calculate from, MEAN (A3:B6) will work out the average value of numbers on those cells, MAX (A1:C4) will get the biggest value, MIN (A1:C4) the lowest value.

ROW () (yep, empty brackets!) gives the row number of the cell it's in, COL () the column number. These are extremely useful –

in the conversion table example here, you can simplify things a lot. The headings row in cells C5, D5, E5... (0.0, 0.1, 0.2...) contain the formulae (COL()-5)/10 duplicated relatively. The column with the E5, ie, cells B6, B7, B8... (0, 1, 2...) has formulae like ROW()-6. The cells with the conversion formulae in them, eg, cell D6, all have the formula D5*(ROW()-6)/(COL()-5)/10 again duplicated relatively.

If was mentioned last month. A full list of the functions appears in the Mini Office manual, though how often you use RAD to convert from degrees to radians or LOG to find logs to base 10 depends on what you use your spreadsheet for.

Original print

Now you can print out your ready reckoner.

From the main spreadsheet menu select 'Print'. From the print menu change the options displayed by moving onto them and pressing [ENTER] to change an option.

'Headings' lets you select whether you want 'Rows', when you'll get 001, 002, 003 etc down the side, 'Columns' when you get A, B, C etc along the top, both of them, or 'None' (they mean 'neither').

'Printer type' lets you select the normal printer ('PCW') or your other printer (eg. dot matrix on a 9512) via 'Parallel'. Printer width is self explanatory and 'Print style' lets you choose condensed print for large spreadsheets, high quality (NLQ) draft quality or – a very useful option – 'Sideways printing', allowing you to print out very wide sheets on continuous paper without having to break them up. Load the printer, print the whole spreadsheet, and there you have it. On a 9512 you can't get sideways printing on your

supplied printer and condensed print looks best with a 17 pitch daisywheel. The printer thinks for a few seconds before it starts, so be patient!

When the exchange rate changes, just load up the sheet again, edit cell D2 to show the new rate, recalculate ([F3]) and print the new sheet. It'll all be updated for you. ■

Expensive deleted

To delete a single cell press [I] then 'y' to confirm. To delete a row or column press [CUT] followed by 'r' for row, 'c' for column and then 'y' to confirm. If you just want to change the contents of a cell, move to it and press [F7]; you can then edit it with the cursor and delete keys.

Condensed print on a 9512 using a 'Mini Gothic' daisywheel

£ to Dn Conversion Table		Current exchange rate: 3.12

AMSTRAD ACCOUNTS

PCW 8256 - PCW 8512 - PCW 9512

This system is no nonsense, purpose designed, traditional style double entry book-keeping, capable of operating at any level from a simple cash account right up to a fully sophisticated feature packed system to handle up to 500 Normal ledger accounts plus 999 Sales and 999 Purchase ledger accounts.

BOOK-KEEPING AND ACCOUNTS

by A.G. Clough F.C.A.

PRICE (including manual):

Version 1 book-keeping only.....	£57.50
Version 2 As V.1 plus integrated invoicing.....	£69.00
Version 3 As V.1 plus invoicing & stock control.....	£80.50

Write or phone for detailed information or, as we strongly recommend,

SEND FOR A COMPLETE DEMONSTRATION PACKAGE

Discs Only	With Manual(s)
Version 1.....	£5.00.....£14.00
Version 2.....	£7.00.....£14.00
Version 3.....	£8.00.....£16.00

This package, on two discs, programs and data, contains the whole unabridged system ready to use, less only the facility to set up the accounts headings. We have done this already, setting up more than 200 example accounts with representative prime entries for a typical month, ready to put to experimental use immediately after copying the discs.

EXPERIMENT WITHIN MINUTES. Having read only the simple single sheet instructions, you can, for example, view any ledger in normal or historic mode, sequentially or by random account, produce statements or payment advice, practise prime entries, study a credit control analysis, read or print a Trial Balance and even do a pseudo profit or loss calculation for the period.

To properly understand the invoicing and stock control, and experiment with your own invoices, you will need the manual.

Follow up service available.

ALSO AVAILABLE:	Independent invoicing.....£19.50
	Independent invoicing and stock control.....£29.00
	CLUB ACCOUNTS.....£59.00
	GOLF HANDICAP - Records and revisions.....£29.00

Club Accounts offers full book-keeping facilities including subscription ledger and bar takings control. The handicap records system is supplied free with Club Accounts. It implements the latest changes in the Standard Scratch Score and Handicapping system 1983.

POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE:** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years.
- **PREDICTS:** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL:** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE:** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY:** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **LEAGUE AND NON-LEAGUE:** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- **PRINTER SUPPORT:** Full hard copy printout of data if you have a printer.

PRICE £18.00 (all inclusive)

NEW
AVAILABLE

FIXGEN 88/9

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1988/89. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £19.50 (for both)

COURSEWINNER V3 THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date. **FULL PRINTER SUPPORT.**

PRICE £18.00 (all inclusive) Includes Fast AND National Race versions.

HEY PRESTEL

Andrew Bibby plus PCW, modem, and Prestel: what does it add up to?

Prestel sounds too good to be true: any information you want available instantly on your computer through the phone lines, just as they do in travel agents, booking offices and banks. Unless you live next door to a reference library, it seems just the thing for writers, journalists, business users...

But what sort of animal is it? Is it a dark horse, or a pig in a poke? Will it bring home the bacon, or take you on a wild goose chase? Our man with the modem tells all...

This has been a tough assignment. Find out about Prestel, they said. Find out what's available, whether it's worth the money, and how you plug in an Amstrad PCW to obtain it. 8000 Plus readers are intelligent people, they said – they want to know whether this is really the best thing since sliced bread and pull-down menus, or just an expensive gimmick.

I said I would do what I could.

And so I have. Comfortable evenings slumped beside the television have had to be sacrificed and instead my duty has led me to spend long hours staring at the familiar green PCW screen, occasionally typing in long rows of numbers at the keyboard, while somewhere in the distance a British Telecom computer called Dickens feeds information up the telephone line to me at a thousand or so bits per second. (If you've been trying to telephone me recently and found me engaged, now you know the reason – it was Dickens).

I can assure you that no expense has been spared in my efforts. (Fortunately Prestel only bill quarterly). However, I have definitely emerged from my labours as a wiser person. I now know, for instance, that the population of Atrinchram is 38,841, and that market days in Royston are on Wednesdays and Saturdays. I know that 145 McDonald hamburgers are consumed every second of the day (indeed, they provide the main daily meal for 19 million people).

I can tell you the time of the next Polish Airline flight to Prague, and the price of a one-way ticket on the boat from Lerwick to the Faroe Islands.

I have learned from a helpful "electronic healthfood shop" that my family need Vitamin C Plus, Super Vitamin E, Cod Liver Oil, Wheat Germ Oil, Zinc, Iron and Calcium Berries, Trace Element Cocktail and something called Maxumine Germanium to help meet their nutritional needs. (The shop helpfully offered to take my electronic order for these items, though just in time I managed to call up another page).

Leisure time

I checked the top ten, played silly games, read crime prevention advice from the Hertfordshire Constabulary. But I also remembered matters spiritual. Prestel, I discovered, has its own God slot ("a quiet space on Prestel with a thought to uplift, interest, comfort or provoke thought") and I can confirm that it was suitably interested and provoked (if not precisely uplifted) to learn that "Today our thoughts are with Saint Denys (or Dionysius), first Bishop of Paris, put to death during the persecution of Valerian."

Finally, I remembered my obligation to assist the 8000 Plus staff at Bath (pop, 79,965; market days, Mon, Wed) in planning their leisure time activities. May I reveal that the Christmas panto at Bath's Theatre Royal this year is Robinson Crusoe, with Leslie Crowther in the leading role.

Which reminds me. I'm currently working on my own play, about a journalist marooned on a desert island with only an Amstrad PCW, a RS232 interface, a modem, suitable software, and a subscription to Prestel to keep him company. Will he ever escape back to real life? (Will he ever pay his Prestel bills?)

Access ability

All right, so you've got the general idea. In among the 257,000 pages of information ('frames') currently available on Prestel is some unbelievable rubbish. Even the potentially useful material can be so well hidden away, at least to the Prestel novice, that it makes it hardly worth trying to find – why bother searching through endless introductory frames when the helpful staff at the local reference library could answer your query straight away?

In fact, it's common to hear the view expressed that BT has blown it – that Prestel, a potentially valuable medium, just hasn't been allowed to develop its potential. BT didn't precisely help matters when it increased its Prestel charges last summer, slapping on a new time charge for evening and Sunday accesses which had previously been free of charge.

Nevertheless, I don't want to be entirely negative. Somebody somewhere undoubtedly finds Prestel worthwhile. British Telecom claim that a total of 7½ million frames are accessed each week (there are 90,000 terminals linked into the service), and some of the specialist facilities have proved very successful. For example, British Telecom Travel Service (BTTs) has been built up, tailored to the needs of the travel business, while CntService provides a constantly updated link to the world's financial centres for anyone who wants to know minute-by-minute how their investments are progressing. There's also a FarmLink facility for farmers, as well as the home and office banking services which use Prestel, and which were reviewed in the October edition of 8000 Plus.

TV services

Prestel is sometimes confused with BBC's Ceefax and ITV's Oracle. But in fact, Ceefax and Oracle use a very different technology, transmitting the text as part of the usual broadcast signals. Not the same at all!

Socket to me

To use a modem your telephone must have one of those jack plug type sockets (Telecom 500, it's called), the sort that lets you plug in the dreaded answerphone.

Information providers

Perhaps it's misleading, therefore, to suggest that Prestel is one unified service – British Telecom themselves describe it as an electronic publishing medium, which can be used for a whole range of functions. In fact, most of information frames which a Prestel user can access are not 'written' by Prestel itself, but by other organisations – the so-called Information Providers (IPs).

Some of the IPs are large organisations who find it worth their while to put key information about their services on to the Prestel database – for example, I was able to consult the British Airways frames, when a friend asked me to check the prices of flights to Hamburg.

But other IPs are independent companies who have become established just to provide a service on Prestel. They make their money either by sub-letting Prestel frames to other organisations (sub-IPs), who may be too small to be able to provide the necessary expertise and equipment to run their own pages, or by charging Prestel users a fee for accessing particular pages. Though most Prestel pages are free, many are not: users will find messages advising them of the cost (from 2p upwards). (All these charges are collected centrally by Prestel, and then distributed to the appropriate IP).

For example, many of the 'leisure' pages on Prestel tempt you into answering quizzes, looking at your horoscope, or checking out latest news or gossip – at a cost. I managed to resist paying 10p to find out if I was sexy. A more honest question for the IP to find out if I was asked, I felt, would have been: 'Are you gullible, and easily parted from your money?'

Some of the 'harder' information is considerably more expensive: for example, the detailed weather forecasts from the Meteorological Office would set you back 75p. I even came across one competition on the CitService section of Prestel which appeared to be charging £25 an access – the ultimate way for yuppies to while away a few spare minutes.

Paying for Prestel

Of course, it's not just the user who has to pay for using Prestel. The Information Providers themselves normally have to pay for the privilege of putting up their information. Smaller organisations sub-renting frame space from an

Behind closed doors

Not every page on Prestel is available for public access. There are also areas of Prestel given over to Closed User Groups (CUGs), who have taken over a certain number of pages for private communication purposes. These pages may be confidential to members of a particular company, club or profession – or they may be available to anyone who is prepared to pay an extra subscription.

One of the largest of the CUGs is Micronet, which was set up to offer a Prestel-

based club for microcomputer users.

Micronet offers, in addition to all Prestel's offerings, its own leisure and business pages (as well as a route into Telecom Gold): Micronet's quarterly subscription is £20 a quarter (including Prestel), though if you pay a year's subscription up-front (£80) they will currently supply a free modem – quite a bargain, if you would otherwise have to pay for the hardware. Micronet's telephone number is 01-837 7672.

IP may also have to pay for frame design and updating services. To give some idea of the costs, one IP is currently offering a ten page block booking at an annual fee of £495, with subsequent pages being charged at a sliding scale beginning at £40 a page.

Whether this is good value depends, presumably, on what you intend to do with your pages. I chose at random one small business, the Leeds based bicycle shop Two Wheels Good, who have four pages on Prestel, and phoned up to ask them whether the investment was worthwhile. Partner Gareth Rainford wasn't very positive. 'We have a large mail order business, and it was mainly for mail order

Micronet rent pages from Prestel and supply a variety of services

'Amster's Cage' is the section of Micronet for Amstrad users

sales that we decided to experiment with Prestel" he said. "It's cost us about £350 a year, and we had about fifteen enquiries the first month we came on-stream, but that was about it. People are very lucky to track down our pages, and I don't think we'll be carrying on with Prestel".

Because Prestel is based on free market forces, and without any central editing of what is available, there's no guarantee that the organisation whose information you require will have chosen to put in on to the Prestel database. For example, when first using Prestel I set myself as an exercise the task of trying to find out a number of facts or details which I thought a good public library would be able to tell me: among those I failed to find on Prestel were the times of high tides at London Bridge, the date this year of the Diwali festival, and the current range of Amstrad computers.

That's not to say that this information isn't on Prestel somewhere. One of the problems for the newcomer is the time it can take to find the page you want – Prestel pages only have space for 24 rows of information, with 40 characters each row, so the system operates through a series of menus and sub-menus, as you gradually home in on the topic you want. It's possible to jump straight to a frame if you know the right page number to call up, and a

all need to get 'on-line' – and that means acquiring a modem, RS 232 interface, and adequate software to handle viewdata transmissions. (The first two are advertised variously through 8000 Plus, and the Mini Office suite includes communications software). It's then necessary to subscribe to Prestel – currently £8 a quarter for personal customers, and £18 for businesses. After that, you'll be given a 10 digit ID number and a four-digit password, together with a telephone number which you can use to call up your nearest Prestel computer (local telephone charges apply).

Dickens, or Kipling, or Austen, or whichever computer you get, will transmit electronic data through your phone line to the PCW at the relatively fast speed of 1200 baud, but there's also a facility for you to respond (there has to be, if only so that you can tell the computer your ID and password, and which pages you want to call up), though the response function operates at the much slower speed of 75 baud. To an extent, therefore, Prestel is interactive, and this feature has been developed in a number of ways. Response frames to Information Providers or to Prestel itself are a familiar feature: you can use them for 'teleshopping' (ordering goods, which will then be mailed to you), booking hotels or theatre tickets, or simply requesting brochures or further information. In fact, the facility to obtain holiday brochures is particularly useful, and generally free of charge.

Open the mailbox

You can also send messages to other Prestel subscribers, and receive messages back, using the Mailbox service. This is a very basic electronic mail service, and adequate as far as it goes – it has none of the sophistication of Telecom Gold, but is considerably cheaper. An added refinement is that Prestel subscribers can use their mailboxes to send and receive telexes, through a central Prestel telex facility.

An added technical refinement to Prestel was introduced by British Telecom in 1982, when they added the possibility of 'gateways' being set up between the Prestel computers and other private computers. For example, users of the Bank of Scotland's home banking service HOBBS are switched from Prestel through a gateway into the bank's own computer network. Another gateway will take you into British Rail's computer facility, if you want to check train details or fares.

In fact, British Rail offer a considerable amount of useful information for the rail traveller, making this a useful addition to Prestel's range of services. It's rather unfair, therefore, to knock them if they don't always deliver the goods.

Nevertheless, last time I accessed Prestel to enquire whether trains were running normally in my own part of the country, B.R.'s computer flashed up the following message: "Input to this page has been temporarily suspended due to equipment problems". Electronic operating difficulties in the Watford Junction area, no doubt...

At what cost

Prestel lost a few friends last July when they unexpectedly bumped up their charges. It now costs 7p per minute to connect to Prestel, with a lower rate of 1p a minute between 8pm and 6am, and on Sundays. You also have to pay your ordinary telephone charges, though almost everyone can connect to Prestel at the local (L) rate.

The quarterly subscription to Prestel is now £8 for individuals and £18 for businesses.

Certain Prestel services attract special tariffs, which Prestel will be happy to reveal to you.

If you have a modem and software, and fancy a peek at Prestel before signing up, it's possible to get access to a small sample database without charge. There are different numbers to dial up, depending on where you are located – to get more information about this, or anything else to do with Prestel, contact them by telephone on 01-822 1122.

system of key words can also work sometimes: for example to check an air-flight, the keyword 'AIR TRAVEL#' will at least get you to roughly the right subject area.

Another problem is that the routes between pages aren't always well maintained. For example, you may be told to 'key 4 for more information', only to be subsequently faced with an error message. It's sometimes also difficult to extricate yourself from particular sections of Prestel.

Using Prestel, in fact, can be a bit like wandering around a large old-fashioned department store, full of odd corners and annexes, where most of the sales space has been rented out to franchise holders. It's relatively easy to enter each separate trading area, but there's no guarantee once you're in that the exit route will be the same way as you came in. (And of course this particular department store charges you to let you in through the front door, and for each minute you spend browsing).

Technology

The technology which makes Prestel possible was developed during the early seventies, as a spin-off from research work which the Post Office was undertaking to develop a visual phone service, and Prestel was finally launched publicly in 1980. It's now, together with Telecom Gold, a separate division of British Telecom (known as Viewdata UK). Prestel makes use of eight mainframe computers (with names like Kipling, Keats and Austen, as well as Dickens) spread across the country, linked with two London based computers, which provide updating and message holding functions – all the computer centres hold identical copies of the database.

To access Prestel from your Amstrad PCW, you'll first of

SPORTS STRATEGY

ESSENTIAL LEISURE SOFTWARE FOR ALL PCW'S

Coda Software has responded to the lack of high quality leisure software available for the PCW by releasing "Sports Strategy" — an expanding range of titles which all have one important feature in common. They are designed to test your abilities to the limit not just once or twice, but again and again, providing an on-going challenge which is fairly unique in today's software market. We know that "Sports Strategy" represents a milestone in truly outstanding value for money software. Will you be in with us at the beginning?

WORLD of SOCCER

International management is the ultimate challenge in soccer. Many have succeeded at club level only to melt under the floodlights of the international arena. Build a squad of players balanced enough to beat the best in both the European Championship and World Cup and you'll be in with a chance. Choose to manage any one of 33 European squads. The U.K. countries come with 16-man squads already defined and can be increased to 36 with players of your own choice. Guide your squad through a 4-year-period culminating in the World Cup itself. Have you got what it takes to go all the way in the WORLD of SOCCER?

HEAD COACH v3

Having control over 45 American footballers in an N.F.L. Squad is perhaps the most demanding job in professional sports. Your responsibilities range from calling the plays in a match, to drafting rookies from college. Your quest for Superbowl glory will match you against the likes of The Bears, The Redskins and The Raiders — teams with the ability to shatter your dreams — unless you have a game plan to stop them. Experience the tribulations of training camp, the heartbreak of injuries, and the triumph of Superbowl glory, and you'll know what it really means to be HEAD COACH.

INVEST WITH PRO-PUNTER

- NOW, you can turn your PCW into an expert racing adviser.
- PRO-PUNTER is a sophisticated, disc-based expert computer system for home micros which ACCURATELY interprets horse racing form.
- No database to update - starts each race from 'scratch'.
- In extensive trials over both FLAT and NATIONAL HUNT seasons, 57% of horses top-rated by PRO-PUNTER won, representing an average post-tax PROFIT per race of 80% of capital invested. 85% of winners came from within the top three rated, representing an average post-tax per race of 18% all three backed.
- Researched and developed over three years PRO-PUNTER uses information from the racing press and analyses ALL major aspects of racing form.
- Produces a RACE FORECAST, generates a COMPUTER S.P., highlights good and poor VALUE BETS and OFFERS INVESTMENT ADVICES
- PRO-PUNTER adjusts automatically to the race under analysis. You don't need to be an expert yourself

Available now for the AMSTRAD PCW range, Amstrad PC/PPC PC/IBM COMPATIBLES, CPC6128, ATARI ST, BBC.

- PRICES £57.50 including VAT, P&P (please specify machine). Orders and enquiries to: DGA (8000+) SOFTWARE, PO BOX 36, ASHTON UNDER-LYNE, LANCS. OL7 9AJ

THE COMPREHENSIVE INVESTMENT PROGRAM!

STOCKMARKET is a program designed to help you plan your investments and keep a close and careful watch on their progress. It enables you to record full details of your purchases and sales of stocks, shares, unit trusts and other securities. Dividends can be recorded as they are received. If required, cash balances in savings accounts can also be monitored as stocks are bought and sold. It also lets you record and plot prices of shares, unit trusts, exchange rates, indexes etc.

STOCKMARKET does not have to be used only with your real investments. We all see shares recommended in a newspaper or magazine that we think will do well. Six months later if the price has gone up we wish that we had trusted our judgement. If the price has fallen we quietly forget it. With STOCKMARKET you can record details of as many shares as you want. These can include hypothetical folios of 'hot stocks', recovery shares, penny shares or whatever you choose. You can practise buying and selling shares and see how well you do!

The program is easy to use and comes complete with a comprehensive manual and demonstration files including real price information going back several years for several shares (inc FT 30 index, British Telecom, Amstrad, Marks & Spencers) so that you can plot graphs straight away.

PORTFOLIO MANAGEMENT

- Record full details of your portfolios of stocks, shares, unit trusts etc.
- Practise buying and selling and accurately record your progress.
- Up to fifty shares per folio. As many folios as you like.
- Buy and sell shares with automatic calculation of dealing costs.
- Ten sets of dealing costs which you can alter as necessary.
- Record dividend yields and price earnings ratios.
- Update prices and automatically recalculate share and folio values.
- Record tax credits (not CPC) and dividend payments.
- List one year's information for the tax man (not CPC).
- Keep records of your cash as you buy and sell.
- List your present folio, past transactions, dividends and cash accounts.

PRICE ANALYSIS

- Record values of share prices, unit trusts, indexes, exchange rates etc.
- Store up to 260 prices per share (equivalent to weekly prices for 5 years).
- List all the prices for each share.
- Plot prices and moving averages on a logarithmic or linear scale.
- Choose any period for moving averages. Plot them separately or superimpose them on the price.
- Automatic scaling of graphs so they always fill whole screen.
- Easy to read scales for prices and dates (not just week numbers).
- Complete with real weekly prices for several shares for the last few years (inc FT 30, British Telecom) as a demonstration.
- Use curves as a guide to the best buying and selling opportunities.

Comprehensive fifty page manual. Complete with demonstration account and prices.

AMSTRAD PC, PPC, IBM PC and compatibles £39-95

AMSTRAD PCW £39-95

(AMSTRAD CPC (disc) £29-95)

Prices are all inclusive worldwide. Send cheque or phone any day (including weekends) from 8am to 9pm and quote credit card number for immediate delivery by first class post.

BOOK LOOK

Sharon Bradley looks at books to answer the questions:
What is LocoScript? And why bother anyway?

AMSTRAD PCW - WORD PROCESSING WITH LOCOSCRIPT

by Betty Lowe

£5.95 (plus 50p postage)

● Scanda Press (0695 421368)

Word Processing with LocoScript, by Betty Lowe, is a thorough hands-on guide to LocoScript 1. Although more widely distributed in the educational market at present there is no reason why any newcomer to LocoScript shouldn't find the book useful and informative. All the practice that is needed for the user to become comfortably conversant with LocoScript is provided.

It's common for books of this kind to assume no prior word processing experience in the reader. It is unusual, however, to find a first chapter beginning with such fundamental instructions as 'Insert plug in mains socket; SWITCH ON first bit of socket, etc...' The tone will surely encourage even the most hapless PCW-phobe.

Step assister

The book progresses logically through the program; it begins by explaining to the reader how to create a document, goes on to demonstrate the editing facilities that are available once you have created it and proceeds to show you how to print it out. As well as instructions on how to perform a particular task some units also have a 'What To Do' box which will tell you which steps to take should anything unexpected happen; ('If your exercise appears to have gone disastrously wrong, or you wish to try it again, press EXIT and select ABANDON EDIT ...')

The emphasis is on the program's various practical applications, which, let's face it, is why most of us would be using it anyway. Ample time is also devoted to all of LocoScript's layout tricks and display features.

Unit 13 acts as a kind of halfway house and is appropriately entitled Consolidation. It gives you the opportunity of checking up on your own progress by practising an exercise which incorporates most of the features covered.

The strength of this particular guide lies in its determination to explore all of LocoScript's avenues instead of just sticking to the already well-trammelled guide lines. So often, even the most hardened LocoScript users will stick to a particular method of doing something either because they're unaware that there's a faster way of doing it, or because they haven't the time to learn it. Lowe, on the other hand, has opened her audience's eyes to all of these possibilities right from the word go. ■

8000 PLUS VALUE VERDICT 5/5

COMPUTERS - WHO NEEDS THEM?

by D Charlton, S Kosminsky and M Lunnon
£5.00 (inc. p&p) ● London Voluntary Service
Council (01-338 0241)

This new book has been written to help anyone needing to make decisions about introducing and implementing new technology into their working environment. Although written primarily for the voluntary sector there is much in it of interest to the small business, to new users who still have a host of unanswered questions and to the complete novice who has either no expectations at all or wildly inaccurate ones.

Much has been written about microcomputer systems; what this book sets out to do is translate some of the technical jargon so often aimed at business users into

clearly comprehensible terms, and generally decode some of the industry specific terms that inevitably surround specialist subjects.

The book is very much needs- and means-oriented in that it will help you make the right choices as far as hardware and software are concerned on the basis of first, the uses to which you would put the system, once installed, and second, the funds available to you at the time of purchase.

To make an informed decision it's usually a good idea to know what is available. The book's ten chapters explore in detail the differences between certain systems and how size, capacity and

speed relate to the uses you might have for a computer.

Chapter 1 explains exactly what a micro-computer system consists of while Chapters 2, 3, and 4 concentrate on the three most likely tasks to which business people would put their system: word processing, data processing and financial planning. It's all about analysing the work that your particular organisation does and working out how computerisation can be used to improve profitability.

To finish off, the book will remind you of a few practical pointers to be considered once the system has safely been installed: software security and data protection for example.

Computers - Who Needs Them? is a very comprehensive look at the process of computerisation. It will be a vital read for anyone thinking of taking the considerable and costly plunge into office automation, whatever the machine. ■

COMPUTERS - WHO NEEDS THEM?
8000 PLUS VALUE VERDICT 4/5

LOCO 2 vs M

Looking for a cheap upgrade to LocoScript 1?
Rob Ainsley investigates...

If you're suffering the equivalent of motorway hypnosis watching LocoScript 1 scrolling endlessly on, you'll want to get something a bit faster. If you're budget conscious but want quality there are only two real choices for your step up: LocoScript 2, or Mini Office, the five-program suite which includes a word processor. You can get both for £20 or so... but which is best for you?

Heavy words

Serious writers should splash out on Protext (£59.95) or its cut-down cousin, Pocket Protext (£39.95) – which lacks only the mailmerge facility. It's a fast, flexible, powerful word processor with a bag of features like simultaneous two file editing, lightning word counter, zippy fast block handling, near instant find and exchange, etc. etc... Like Mini Office it's command rather than menu driven, so takes time to get to know. If you word process with large documents it will revolutionise your working habits.

LocoScript 1 is a good word processor, but there are some disadvantages. The procedure to change a layout in the middle of a document is obscure to say the least and it's painfully slow at times.

Assuming you've only got twenty quid or so to spend, the choice of upgrade has to be LocoScript 2 or Mini Office's word processor. With Mini Office you also get a database, a spreadsheet, a communications package and a graphics utility thrown in; and you can use data from the database in the word processor – which is fast, has an instant word counter, and has a bagful of features ranging from the mindbogglingly useful to the slightly silly.

LocoScript 2, on the other hand, offers reasonably fast movement around your document (significantly faster than version 1) but the handling of blocks of text is still cumbersome and there is no word counter. However it can print virtually any language directly on the PCW printer, normal text on virtually any printer, and is considerably more robust and reliable than Mini Office.

Which you would find useful depends on what you want to do with your word processor. For getting text quickly onto disc, Mini Office wins hands down. If you're concerned with 'bulk text' writing a lot of the time – theses, articles, books, sermons, business reports – Mini Office's speed will astonish you, and its word counter works something like 600 times faster than LocoSpell's! Particularly irritating to longtime users of LocoScript is the slowness of block movements: to shift those hundred words of intro from the beginning to the end, you have to mark out a block in reverse video, watch it wind its way off the screen, jump to the end, and paste in the block you just marked out. Mini Office is much, much faster.

There are snappy features enabling you to delete words, lines, parts of lines and blocks of text at a stroke. Mini Office automatically formats text for you as you go, like LocoScript, so you don't have to worry about mucking up the layout by adding a word here or there, but it does it much faster.

Out of print?

On the other hand, once you've got the text on disc, LocoScript is much better for doing anything sensible with it. Mini Office's early bugs which preventing printing out text acceptably have been fixed (in the latest version, 1.07) – well, until someone finds another one, of course (the latest version is bug free but don't try pressing [EXCH] when you want to exchange something in a document!). LocoScript 2 still gives you more flexibility on your printout than any word processing package in the world at the price. Daisywheel or dot matrix, 24 pin printers, foreign languages, accents, mathematical symbols, a variety of styles to print out in... Mini Office has a strange way of printing out justified text, going back after each word and overprinting for NLQ; if you

LocoScript 2 features a quicker way to change a layout than Loco 1

Amazing but true

Simple arithmetic shows that while LocoScript 1 found a word at the end of a 110k document using [FIND], the average flat in the centre of Bath went up 75p

New PCW software from ARNOR

Word Processing

PROTEXT FILER - New Release! £24.95

This invaluable program will keep your address lists or other datafiles in good order. Includes: datafile management from within Protext; extremely flexible file sorting program; label printing and mailmerging using the datafiles. Send SAE for full details.

PROTEXT OFFICE - New Release! £34.95

Invoice printing program as used by Arnor. Easily configurable for your own requirements. Works from within Protext. Produces invoices/credit notes/delivery notes/statements. Includes Protext Filer. Send SAE for full details.

PROTEXT Word Processor £59.95

Protext is now firmly established as the alternative to Locoscript.

All the features you would expect from a good word processor - many text editing commands, print commands, spell checking and mailmerging. The refinement and thought that has been put into the program - logical keystrokes and commands, clear layout, speed and power ... all go towards making Protext ideal for the novice or the experienced user.

- * On-screen help * Typewriter mode * Insert or overwrite typing mode *
- * Word count * Undelete feature * Move/copy/delete/print blocks of text
- * Box manipulation * Configuration * Personal dictionaries *
- * Exec files * Two file editing * Keyboard macros * File conversion *
- * Comprehensive Find & Replace * Foreign languages and accents *
- * Program editing mode * Proportional printing, right justified *
- * Conditional printing and loop constructs * Print any number of copies
- * Works with any printer * Calculator * Print labels *
- * Use the maths/string functions to produce personalised invoices etc *

New version 2.2

- * Compatible with PCW 9512 * Enhanced spelling checker - larger dictionaries, dictionary on drive M or on program disc *
- * Many improvements based on customer feedback *
- (Upgrade from earlier versions £20.00, please return original disc)

"Protext deserves to be the system by which all other word processors are judged ... a superb product." YOUR COMPUTER

"The great strength of this package is its ease of use" CWTA

"Protext is the solution to all Locoscript's drawbacks" PCW

"Makes Locoscript look like a snail" 8000 PLUS

"Simply the best word processing program to date for the PCW ... Locoscript is effectively dead" PUTTING YOUR AMSTRAD TO WORK

PROSPELL Spelling Checker £29.95

Typing and spelling errors are simple to make and frustrating to miss. But by using Prospell, you can produce documents that are error-free. Prospell is an automatic spelling checker that points out any odd words or dubious spellings.

- * Works with Locoscript 1 and 2, WordStar or any ASCII file *
- * 33000 words * room for thousands more * up to 2000 words/min *
- * Find words and anagrams - Ideal for crosswords *

New version 4.1

- * Compatible with PCW 9512 * Dictionary on any disc/drive Incl. M *
- (Upgrade from earlier versions £15.00, please return original disc)

"Anyone looking for a spelling checker need look no further" AU

POCKET PROTEXT new low price! £29.95

Budget price version of Protext without spelling checker, mail merge and box mode. Now compatible with PCW9512.

"Just as powerful as the full Protext and at a very attractive price" 8000 PLUS

CP/M Programming

BCPL new low price! £24.95

Flexible, fast, general purpose programming language. Extensive set of I/O libraries including access to CP/M routines. Example source files supplied, including full screen editor and all the libraries. 60 page manual covers the language and gives details of the libraries.

"Easy to use, yet both flexible and powerful" CWTA

"Amor's clear, concise manual will have you programming confidently very rapidly" AMSTRAD ACTION

C £49.95

Complete C development system now available at new low price

- Optimising compiler - Full Implementation of K&R standard -
- Floating point arithmetic - 32 and 16 bit Integer arithmetic -
- I/O and maths libraries - Conditional compilation - File inclusion -
- Macros - Linker accepts C and assembler (with Maxam II)
- Stand alone generator produces COM files
- * Protext compatible editor: * Fast and easy to use - Two file editing -
- On screen help - Fully configurable - Powerful find and replace -
- Keyboard macros - Exec files - Compile directly from editor -

"Streets ahead in terms of programming power" AMSTRAD ACTION

"In typical Amor fashion, they've taken their time and got it right" AMSTRAD COMPUTER USER

MAXAM II £49.95

Complete CP/M machine code development system at new low price

- * Macro assembler * nested conditional assembly * file inclusion *
- * textual substitution of macro parameters * repeat loops *
- * Full expression evaluation * Error listing to screen/file/printer *
- * 8080 mode * Linking facility * Create object files for use with C *
- Window based monitor, with:
- * line assembler * disassembler * memory editor * find string * relocate
- * move memory * compare memory * fill memory * bank switching *
- * symbolic debugger * single stepping * set memory limits for stepping
- * stack checking * conditional breakpoints * trace mode * edit registers
- * Editor is program mode of Protext (as for C, above) *

"Maxam II - now the best gets even better" CWTA CPC

"Maxam II is stunning ... the most complete and competent programming package around. Simple, speedy and sophisticated" AMSTRAD ACTION

Special Offer:

Buy one of Maxam II or C for £49.95, and the other can be yours for just £20. Remember that Maxam II and C can be used together to produce hybrid C/assembler programs.

SUMMARY OF PRICES:		Maxam II	£49.95
Protext	£59.95	C	£49.95
Pocket Protext	£29.95	Maxam II and C	£69.95
Protext Filer	£24.95	BCPL	£24.95
Protext Office	£34.95	Prowort (German Protext)	£59.95
Protext Tutorial disc	£5.00	Protext (Atari ST)	£79.95
Prospell	£29.95	Protext (IBM PC compatibles)	£59.95

All programs work on Amstrad PCW8256/8512, PCW9512, CPC6128. Orders normally despatched on the same day they are received. Please mention this magazine when ordering.

Releasing your Amstrad's potential ...

Arnor, 611 Lincoln Road, Peterborough, PE1 3HA
All prices include VAT, postage and packing, 24 hour Access/Visa. (0733) 68909

Phone Now

from the word processor to the database either, though you can use data from the database. The mail merge facility this gives you is fairly simple – a fill-in-the-blanks function of the 'Dear (name), How are things in (town)' type. No calculations or loops or conditional testing as you get in LocoMail.

In fact, LocoScript 2 is a real gateway to a 'LocoScript family'. LocoFile, the database add-on, only works with LocoScript 2 in common with most of the new products from Locomotive. It's a simple and straightforward card-index type of database but works completely from within LocoScript – you can use it while you're editing a document, look up an address, copy and paste it into the document and so on. LocoFile and LocoMail files are interchangeable giving you genuine compatibility between the word processor, the mail merger and the database. Then of course you've got your extra font programs, character redefining programs and so on, all of which are compatible with LocoScript 2 and its add-ons.

The old question of manuals may come into it too. LocoScript 2 comes with a comprehensive, well-written and clear manual far above the usual standards of software documentation. Mini Office's manual is something of a *cause célèbre* and isn't really much more than a list of commands.

Both programs have their fanatical devotees, and both are good at what they do. In the end, it really boils down to screen vs. output, and familiarity vs. unfamiliarity. It's impossible to generalise and say who would do better with one or the other – the specific need will probably make the decision for you.

Marking time

These figures should give you some idea of the relative speeds of LocoScript 2 and Mini Office for everyday tasks. LocoScript lets you work in either the M (memory) or A (or B) drives, the memory drive being faster of course, so timings are given for both. Mini Office always works on your document in memory but stores it on the A (or B) drive so one figure only is given. The timings are all for the same 5000 word document with no headers, footers or changes of layout.

9512 owners read this

As you already have LocoScript 2, is it worth changing to a new system? The answer may well be no. After all, your system is pretty complete with LocoSpell and LocoMail; Mini Office has no spell checker and a rather less powerful mail merge facility. The fact that it can display italics, condensed print, bold etc. on screen is great but irrelevant if you don't have a dot matrix printer to print them!

Mini Office doesn't work with Greek or other foreign daisywheels, of course: foreign languages are definitely one of LocoScript's really strong points.

However, you may find Mini Office indispensable for some specific purposes. Its speed and word counter make it very useful for writers and report writers who tend to deal in bulk text to fixed lengths, especially if you cut, copy or move blocks of text around a lot.

Mini Office boasts the facility to stop the printer anywhere, including the middle of a line, which means you can change the daisywheel easily for one word or phrase, to print a different pitch for super- or subscripts.

	Mini Office	LocoScript 2
	A drive	A drive M drive
	30k	32k 32k
Size of 5000 word document		
Jump from beginning to end using [DOC]	1s	45s 30s (max) 6s 6s (min)**
[FIND] word at end	22s	1m45s 1m35s
Replace all occurrences of (full stop/blank/blank) by (full stop/blank)	53s	3m35s 2m8s
Move 100 word block from top to bottom of document	1s	6s 6s**
Count words in document	1s	8m35s 8m30s***
Print one page of double-spaced A4 in justified NLQ	7m3s	2m56s

*Time taken varies depending on the amount of changes made since last jump to end. Times based on ten trials

**Includes time to mark out, cut and paste block, but not time to jump to the end of the document using [DOC]

***Using LocoSpell with no user dictionary and all words correctly spelled. ■

Anything you can do...

Here are the things Mini Office can do which LocoScript can't:

- *Count the words in a document
- *Display text on screen exactly as it will print out, including bold, italic and underline effects, pitch sizes, justification, double height/width characters and reversed out (black-on-green) characters
- *Send codes to the printer, enabling you to eg. print graphics or backspace
- *Select 'overwrite' mode (in this mode if you put the cursor over the first letter of CATFISH and type DOG you end up with DOGATFISH; in the normal 'insert' mode you'd get DOGATFISH).
- *Delete whole lines or parts of lines with one keystroke
- *Search for and replace control codes (eg. replace all italic commands with underline commands)
- *Display the text as double width for easy reading
- *Have unlimited numbers of headers and footers (text that goes at the top or bottom of every page, such as page numbers and chapter titles)
- *Display page numbers in Roman numerals (for introductions or decimal (1.0, 1.1, 1.2, ... 1.10, 1.11, 1.12 ... 2.1, 2.2 ... etc.)
- *Swap letters from upper case to lower and vice versa

- surprisingly useful when you've typed a heading 'In the event of fire' and realise it would be better as 'IN THE EVENT OF FIRE'.
- *Print a document to screen so you can check the layouts, page numbers and so on before committing it to paper.

And here are the things LocoScript 2 can do that Mini Office and LocoScript 1 can't:

- *Print two styles (normal or sans serif)
- *Copy and format discs
- *Work directly with any printer in the world (you may have to buy a 'printer driver' from Locomotive to do this for a few pounds)
- *Print out on screen and the PCW 8000 series printer any character from Greek and Cyrillic, and almost all mathematical and scientific symbols needed for university and research work
- *Work with newer products from Locomotive such as – 'printer drivers' enabling you to use 24 pin printers for fast extra quality printout;
- LocoFile, the database that works from inside LocoScript which can be called up while editing a document eg. to look up and copy into the document an address;

- LocoChar, which lets you redefine up to sixteen characters of the LocoScript character set to your own design and include them in documents in bold, italic etc as normal;
- LocoKey, which lets you assign any letter or combination of letter and accent to any key on the keyboard;
- LocoFont, a set of extra print styles to make your printer print out a handwritten script, Old English, etc. etc.

- Like LocoScript 1, but unlike Mini Office, Loco 2:
- *Does decimal, right and centre tabs
- *Works with a spell checker (LocoSpell) in most European languages (except Welsh).
- *Works with a sophisticated mail merger (LocoMail)
- *Can print letters proportionally spaced (so that 1 takes up less space than a for example to give smoother looking printout)
- *Can store phrases

All the products prefixed 'Loco-' are widely available from mail order stockists, or from Locomotive Software on 0306 740606. Prices are all between £15 and £30.

NORTHERN LIGHTS

Amstrad shows North of Watford?
Steve Patient gets on his yak to investigate

Rarely a week goes by without a complaint in the computer press from irate enthusiasts irritated by the lack of computer shows in Caithness, Cornwall or Caernarvon, to mention only a few. But there are some shows outside London. Every now and then there is a show which isn't staged by Personal Computer World at Earls Court. Usually devoted either to Amstrad or Atari they can appear in very remote places - Paris, Hanover... even Manchester

For anyone used to the really big shows the first problem was finding the G-MEX exhibition centre.

There were no directions to it anywhere. It used to be a train station but now even the buses don't appear to go there; it's a forty minutes journey by bus and on foot from Manchester Piccadilly.

The first thing that struck you was just how clean everything looked; then the quietness. Plenty of people around but no speakers blasting out megawatts of Star Wars music to attract hard of hearing games players. Perhaps this show had been put on for serious computer users?

PCW presence was strong - about a third of the stands had one displaying software or actually in working use somewhere and Amstrad continue to promote the series. 8256s were out in force too, so there's no reason to suppose that the 9512s will be taking over as the 'standard' PCW just yet.

Show and tell

There were about sixty stands to see with Amstrad's own being the biggest and directly opposite the entrance. Behind them Locomotive occupied one only marginally smaller. Apparently advance orders for LocoFile (reviewed in 8000 Plus last month) were filling boxes. There are no plans yet for a spreadsheet to go with LocoScript.

There were the usual show stands offering bargain basement prices on any kind of hardware and software; three inch discs were on sale at under two pounds, and most prices were easily comparable to those available at larger shows. If you were looking to spend money and knew what you wanted you'd have found it there. The range was such that you could have bought your computer, software, peripherals, consumables, training and even your office furniture at the show.

Oddly enough the busiest stand looked to be Computer Books, who do not discount, once again demonstrating that the more powerful your computer the more information you need to tie the full.

Since this was an Amstrad show their full range of machines were on display (with one exception). Two demonstration areas had been set aside, one for games running on the Sinclair PC200 home machine and the other in the imaginatively named Amstrad Street showing mock ups of office environments. The PC200 was certainly causing a lot of interest, being a games machine with the advantages of PC compatibility etc., but there were still many mutterings about how its limited graphics output (CGA, limited resolution, only four colours) made it not much better than a £100 Spectrum as a games machine. General opinion was that it would sell, but would not enhance Amstrad's reputation.

The Amstrad Theatre was the biggest single exhibit. There were continuous presentations on offer of Locomotive software. PC200 introductions as well as question and answer sessions with an expert (actually the editors of certain other PCW magazines!)

Amstrad's new 2000 range, the 2086, 2286 and 2386 were being advertised but Amstrad said that only four 2286 and four 2386 machines exist in complete working order in all the world. G-MEX boasted one of the 2386 machines, the most powerful of the range but none of the 2286. They were too busy rehearsing at Brentwood to attend.

Bring on the dancing girls

Piccadilly Radio had a stand there with nothing on display but a small pile of stickers and two gaily clad ladies who urged you to dance. After four hours on the train walking seemed hard enough. Other stands not actually selling anything included the Amstrad Advice Centre boasting three serious suits who knew their stuff.

Indeed, actually talking to the exhibitors was one of the high points; at the bigger shows it just isn't possible. Even in the restaurant you could find a seat and prices there were merely high and not actually extortionate.

Bath Computer Shack said that the show remained busy right through the weekend though from the exhibitors point of view business was slow. Most of the visitors were taking advantage of the advice and presentations on offer but few were buying, they said. This is a pity as the whole point of the exercise is for it to be a marketplace. If there aren't enough sales there may not be a show next year, and it is computer users who will suffer if there aren't any shows to visit.

At £5 to get in the show was expensive. Yet plenty forked out for a seat. To meet the cast and speak with the names behind the advertisements it was worth it, but without sales it won't run and run. From the exhibitors point of view it would appear not to be a runaway success. Maybe we'll make it to Paris next year? ■

MASTERFILE 8000

FOR ALL AMSTRAD PCW COMPUTERS

MASTERFILE 8000, the subject of so many enquiries, is now available.

MASTERFILE 8000 is a totally new database product. While drawing on the best features of the CPC versions, it has been designed specifically for the PCW range. The resulting combination of control and power is a delight to use.

Other products offer a choice between fast but limited-capacity RAM files, and large-capacity but cumbersome fixed-length, direct-access disc files. MASTERFILE 8000 and the PCW RAM disc combine to offer high capacity with fast access to variable-length data. File capacity is limited only by the size of your RAM disc.

A MASTERFILE hallmark is the provision of multiple, user-designed display formats. This flexibility remains, but now it's even easier. With MASTERFILE 8000 you design your formats "live"; no more questionnaires, just move your format effects around the screen using the cursor keys!

Record updating is even easier than before — just steer your cursor to any field on the screen and then insert/erase/alter as required.

Special options are provided for handling dates and surnames, and column totals can be generated.

All screen work is done graphically — and hence we offer unique panel, box, and ruled line options. Choose the line spacing at pixel resolution — you will be amazed how much clearer 9-pixel lines are than the usual 8-pixels. (Study the picture.) And all this faster than CP/M normally lets you paint the screen! PCW printer functions, under menu control, are provided.

Keyed files are maintained automatically in key sequence, with never any need to sort. You can have unkeyed files too, where records can be inserted at any point in the file.

Any file can make RELATIONAL references to up to EIGHT read-only keyed files, the linkage being effected purely by the use of matching file and data names.

You can import/merge ASCII files (e.g. from MASTERFILE III), or export any data (e.g. to a word-processor), and merge files. For keyed files this is a true merge, not just an append operation. By virtue of export and re-import you can make a copy of a file in another key sequence. New data fields can be added at any time.

File searches combine flexibility with speed. (MASTERFILE 8000 usually waits for you, not the other way around.) You can even assign subsets of a file into one or more of seven pigeon-holes for subsequent reference or further manipulation.

FIELD-TO-FIELD CALCULATION is available, using any mixture of terms and arithmetic operators + - * / ().

MASTERFILE 8000 is totally menu-driven, fully machine-coded, and comes with example files and a detailed manual. We claim (modestly) that you will not find another filing system with such power, flexibility, and friendliness.

MASTERFILE 8000 costs £49.95 including VAT and P&P to anywhere in Europe. Elsewhere please add 20% for air-mail service. ACCESS/VISA/MASTERCARD orders are welcome, written or telephoned, quoting card expiry date. Make cheques payable to "Campbell Systems".

Our normal response is return of post, 1st class. CAMPBELL SYSTEMS (Dept 8PL)
 7 Station Road, EPPING, Essex CM16 4HA,
 England. Tel: (0378) 77762/3

LocoMail V

Basic Filling and Merging

1) Merging involves creating both a standard document and a datafile. Typically your standard document is a letter with slots like 'Dear (name), You have been chosen out of all the people in (town) to take part...' and the datafile is a name-and-address list. On merging, the standard letter will take each name and address in turn from the datafile and make up a letter for each one filling the slots appropriately.

At the Disc Management Screen, press C. Create the document, placing all the slots (which, on merging, will contain the data in the datafile) within the (+Mail) and (-Mail) codes.

2) The first page in your datafile consists of exactly the same fields (items of info) as there are in the standard document, separated by something eg. [RETURN]. If the letter is 'Dear (name) Your family at (address)...' the first page of the datafile must be something like name[RETURN]address etc. Field names must be letter for letter identical to the slots in the document.

To make provision for addresses of different lengths, use any non-alphanumeric character (# or ; or : etc) to separate the Address field from the one that follows (see screenshot). At the end of the record pattern, press [ALT][RETURN] to end the page there.

3) Having completed both files, press [EXIT] and select Finish edit by pressing [ENTER].

4) Back at the Disc Management Screen, place cursor over standard document filename and press M. Then select datafile and press [ENTER].

When in Manual (as opposed to Automatic) mode, this menu appears after each 'pass' (ie. each letter).

In Automatic mode, each letter goes straight to the printer automatically. Filling involves pressing [F] when the cursor is on the document filename at the Disc Management Screen. Fill in the slots straight from the keyboard.

condition is being met or not), decide to omit that letter.

A typical LocoMail condition: `{+Mail} # Maintenance Contract = "Yes":<:*>`
`(-Mail)` means if the information stored in the datafile under the field name of 'Maintenance Contract' is 'Yes', do not print a letter.

means 'if' and * means 'omit this letter'. All character strings need quotation marks.

2) Testing for a false condition involves inserting NOT immediately after the hash sign. The following condition must be enclosed within brackets: (+Mail)# NOT (Maintenance Contract = "Yes")<:*>(-Mail)

LocoMail is an extremely powerful and often complicated program to use if you want to get the most out of it. This wallchart will hopefully serve as a quick and easy point of reference when it comes to using those routines which have

of which is false, while NOT and OR means that only one condition out of two must be met, one of which is false.

Numerical Conditions

If a datafile contains details of customers' bank balances (or other numerical data), the following signs make for greater flexibility when setting up conditional statements:

```
# Balance = 0 .... means 'if the
balance is equal to zero'.
# Balance <> 0 .... means 'if
the balance is not equal to zero'.
# Balance <[or]> 0 .... means 'if
```

Balance >= 0 ... means 'if the balance is equal to or greater than zero'.
100<Balance<200 ... means 'if the balance lies between 100 and 200'.

Conditions using information entered from the keyboard

At the top of the standard letter, but beneath the recipient's name and address, type in

```
(*Mail)Response=?; do you want to  
abandon this document>(*Mail)  
(*Mail)Response = "y*";(<*;>)(*Mail)
```

As when using Fill mode, the program pauses so that the response can be typed in. Type in 'y' and the program goes onto the next letter, type in anything else and it will carry on with the merge for that letter.

Alternative Text

Including a piece of text not relevant to all letters in a merge requires typing in a number of conditions, each with appropriate sentences to be included in the document for when one of the

Typical standard document with LocoMail slots

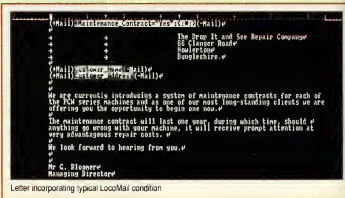

Typical name and address datafile with record pattern

3) Inserting AND means that the consequence will only take place if both (or more) conditions are met.

4) Including OR means that nothing will happen unless one or other of the conditions is met. A combination of NOT and AND ensures that two conditions are met one

and want to erase them all except VITAL.DOC and IMPORTNT.TXT.
What's the quickest way to do it?

2. You want to check if a file called HIDDEN.COM is on a disc. Typing DIR you get SYSTEM FILE(S) EXIST...What's your next move?

3. On a 173k disc you have just two files, group 0 LocoScript documents called THESIS.1 and THESIS.2; both are 40k. Plenty of room, then, to PIP across an extra file from another disc, BIBLIOGR.PHY, which is 20k. However, when you try it you get the following message:

ERROR: DISK WRITE NO DATA BLOCK - A:BIBLIOGR.???
Why, and how can you get round it?

LocoScript

1. A friend calls round at two in the morning in a blind panic. The business report they are editing which must be in by nine looks like this:

```
North West, Sales of black puddings were down 50% on last year. Advertising campaign to be implemented.
North East, The vegetarian tripe, nut-based black puddings and wholemeal meatless pork pies sold well especially in Hull and Beverley.
```

but when they try to add a word to a line, this sort of thing happens, necessitating tedious editing of the tabs:

```
North West, Sales of black puddings and sausages were down
50% on last year. Advertising campaign to be implemented.
```

'There must be an easier way,' they say. What is it?

2. Two hours later they're back. In the middle of editing a document, they suddenly had this happen. What do you tell them to do?

```
ERROR in: Drive A:
Disc is full
Run disc manager
Cancel operation
```

(with but it does that), the se Job

onents has th en and hink ab computi e attac e to su ions, c ases, both, e ase of your PCW. the processor is housed in the Monitor

3. What do they do if they want to commence printing again from a certain page – if a page gets screwed up in the printer for example?

4. At five thirty they return. 'Help! I've just started printing out a fifty page report and it's the wrong one! How can I stop the printer without turning the machine off, and then lose all my work in the M drive?' – how indeed?

BASIC

1. The following morning your friend rings up asking how to incorporate a BASIC listing into an article written in LocoScript. What do you tell them?

2. Next they can't LIST a BASIC listing called SECRET.BAS to have a look at it. How can you unprotect a protected listing like this to be able to LIST it? How do you protect a listing you have written?

3. You want to write a long listing in which many chunks of lines are almost identical, except that PRINT statements are replaced by LPRINT etc. You have no replace or block copying functions in the line editor in BASIC. How do you make your life simpler?

General knowledge

1. Which of the following takes the longest time?

- a) An interglacial period
- b) Waiting for Amstrad to phone you back 'tomorrow without fail'
- c) LocoScript 1 scrolling to the end of a 50k document

2. What is the derivation of the word 'Amstrad'?

- a) Korean word meant to sound like English
- b) Acronym for Alan Michael Sugar TRADing
- c) German slang for 'cheap and dinky'

3. What is the best way to get a screen dump on a 9512?

- a) Make the daisywheel print it out in dots using the full stop
- b) Buy a polaroid camera
- c) Buy a dot matrix printer

4. Which of the following pieces of music can the PCW play best?

- a) One Note Samba by Antonio Carlos Jobim
- b) 4' 33" by John Cage
- c) Toccata and Fugue in D Minor for Organ by JS Bach

5. What is a Z80?

- a) Cambridge Computers' portable
- b) The name of the processor in the PCW
- c) Vitamin broken down by radiation from PCW screen

6. Which of the following would take up about 4000k as a LocoScript file?

- a) The Oxford English Dictionary
- b) The Bible
- c) 8000 Plus's expenses claim for last month

7. Which of the following drivers enable you to print a LocoScript 2 document on a Diablo compatible daisywheel printer?

- a) 3 word
- b) D630 PRI
- c) Nigel Mansell

8. Which of the following would be the correct reply to Amstrad boss Alan Sugar if he pointed to the PCW's microchip and asked 'what's that'?

- a) It's the Z80, Sir
- b) About £3
- c) Slow

9. Which of the following has the most bugs?

- a) Fleet Street Editor Plus
- b) Natural History Museum
- c) American Embassy in Moscow

10. How many times faster is Mini Office's word counter than LocoSpell's?

- a) 60
- b) 600
- c) 6

Answers overleaf...

ANSWERS to previous page

Score up to three points for each answer depending on how well you knew it, and be honest!

CP/M

1. **8512s:** Put your CP/M systems disc (or a copy) in drive B, your disc with the files on drive A and type `B:ERASE *.*[C]`[RETURN].
9512s/8256s: Type `B:ERASE *.*[C]`. At the prompt 'put disc for B in drive' insert the CP/M systems disc. At the prompt 'Press any key. At the prompt 'put the disc for A in the drive' replace the disc with the files on.

The PCW will give the name of each file and ask you to confirm with y or n whether you want to erase it or not. Give y for each file you want to erase and n for files to keep.

2. Type `DIRSYS` and the system files will be shown.

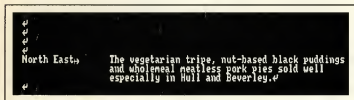

3. LocoScript has kept the old versions of each THESIS document as a 'limbo' file in group 8. This corresponds to user group 8 in CP/M.

LocoScript ignores groups 8 and above for purposes of calculating disc space but CP/M doesn't. So CP/M thinks you have four files of 40k on the disc, making 160k altogether, too much to allow the 20k bibliography as well.

You have to erase the documents in group 8. Type `USER 8[RETURN]` and at the 8A> prompt `ERA *.*[RETURN]`. Return to user group 0 by type `USER 0` and carry on as normal.

LocoScript

1. They should put 'hanging tabs' for each paragraph. These are put into document by `[ALT][TAB]` together. They have the effect that lines below the top one take their left-hand margin as the position of the tab, not the margin:

The advantage of these is that you can edit the text without destroying the shape of the paragraph – the new text reflows correctly.

To put 'hanging tabs' in place of the ordinary tabs they've put in, your friend will have to replace all `[RETURN][TAB]`s by nothing and then all the remaining single tabs by hanging tabs.

They can use `[EXCH]` and give the text to find as `[RETURN][TAB]`, the string to replace with as nothing and make the exchange automatic to the end of the document. Then back at the beginning they similarly use `[EXCH]` giving a tab as the item to be replaced and `[ALT][TAB]` as the item to replace it with.

2. Go to the disc manager as suggested. Move as many big documents as possible from drive A to drive M, or drive B if possible ([F3] Loco 2, [F4] Loco 1) but not the one currently being edited.

When there is enough space left to continue, `[EXIT]` will take them back to where they were before the message appeared. They must remember to rescue the files moved to drive M by moving them to another disc before switching off, or they'll be lost for ever!

You should tell your friend imperiously that they shouldn't work with such long documents and 15k is the sensible limit.

3. Pressing `[PTR]` goes into 'printer control state' and stops the printer in

its tracks but `[EXIT]` will let it resume. What they have to do to stop it completely is press `[PTR]` then Loco 2/[F1] selecting 'Abandon printing' Loco 1: [F7] 'Reset' and confirm.

`[EXIT]` leaves printer control state and returns to normal. If you want to recommence printing from the current page, go via the 'Document' option, [F7] in Loco 2 or [F5] in Loco 1.

BASIC

1. When saving the BASIC listing, save it as an ASCII (simple text) file by typing `SAVE "PROGRAM.BAS"`. A instead of `SAVE "PROGRAM"` (or whatever name the program has).

In LocoScript, copy the listing onto the disc which is to have the document with the listing inserted ([F3] – if you only have a single drive machine, you'll have to insert the original disc, copy the file to the memory, then insert the destination disc and copy the file from the memory to the disc).

At the point in a document where you wish to insert the listing, hit [F1] in Loco 2 or [F7] in Loco 1 and 'Insert text'. Select the listing as the file to insert and there it appears in your document.

2. Create an empty BASIC listing by typing `NEW`. Save the (empty) current listing by typing `SAVE "DUMMY.BAS", A[RETURN]` then `LOAD "SECRET.BAS[RETURN]` or whatever name. Type `MERGE "DUMMY[RETURN]` and then `SAVE "SECRET[RETURN]` (or other name if you want a separate unprotected version). The new version is unprotected and can be `LISTED` and `LLISTED` etc. This may not work on a 9512.

A BASIC listing can be protected from prying eyes by saving it as `SAVE "SECRET.BAS", P` (or any other name).

3. Prepare the listing as a LocoScript document – you can use the block copy, paste, `[FIND]` and `[EXCHANGE]` functions, replacing `PRINT` by `LPRINT` and so on manually.

Save it and from the disc manager make an ASCII file ([F1] Loco 2, [F7] Loco 1) giving the new name as ending in `.BAS` – it will now run as a normal BASIC program.

General Knowledge

Score 2 points for each correct answer of b), 1 for each reasonable guess a), zero for each wrong answer c)

In case you're wondering, in question 3, it is possible to write a BASIC program to produce a screen dump on a 9512 using only the full stop on the daisywheel, and we've seen it done, though taking a picture is a lot quicker and probably cheaper when you consider the short time the standard plastic daisy full stop will last. Screen dumps are not possible on printers other than that supplied with the PCW.

In question 4, the piece 4'33" is totally silent of course. One Note Samba has rather more than one note in it but at least you can get the first two lines. In question 8, the 'right' answer is based on a well known story told about Alan Sugar.

How did you score?

You should have a total out of 50. Multiply by three and take this as your PCW IQ.

132-150 Around 8000 Plus Technical Editor standard. You must spend virtually all your spare time working on your PCW. Seek help immediately.

114-129 Still worrying I'm afraid. Try to eat plenty of fresh fruit and veg and exercise more.

90-113 A good safe boring average. You have a future in writing accounts programs.

66-87 Well, you can impress your great-grandchildren when you tell them you can still use a slide-rule and a typewriter.

42-63 Maybe the typewriter wasn't such a bad idea after all.

18-39 Technology? Who needs it! Did Shakespeare write Hamlet on a PCW? Did Beethoven have an Alan ST and MIDI synthesiser? I think not.

0-18 Roughly 8000 Plus Editor standard. You obviously don't worry about things much. You will live to be 110.

Less than 0 You aren't very good at arithmetic. You have great potential as an 8000 Plus Staff Writer.

AMS STOP PRESS

EXTRA FONTS & CLIP-ART

Now there is another source for your Desk Top Publishing needs. Tecnation, the creators of the home micro DTP revolution and the authors of **STOP PRESS**, announce the launch of **GETSET TYPESET!**, the ideal publishing partner for all users of Stop Press on the Amstrad PCW8256/8512 and 9512. A superb package that includes 3 disks full of a wide range of new and exciting **CLIP-ART**, **FONTS** and **UTILITIES**, to enhance Stop Press. Invaluable for entrepreneur publishers!

The utilities include a **PAGE PREVIEWER**, and an ASCII to LocoScript convertor allowing text from ALL Amstrad PCW WP programs to be loaded into Stop Press.

KNIGHT LIFE

Tony Flanagan looks at Mandarin's latest adventure

LANCELOT

£14.95 • Mandarin/Level 9
(0625 878888) • All PCWs

We're all familiar with the story of Princess Nubilia and the Nymphs of the Triangular Bath-Tub but has anyone heard of Thomas Malory's 'Le Morte D'Arthur' a perverse little book published in 1485 by that hitherto unknown forerunner of desk top publishing William Caxton.

This book recounts the scurrilous escapades of King Arthur and his local Rotary Club (more popularly known as the Knights of the Round Table). King Arthur, the legend goes, had an unhealthy fascination with round tables. This was fine as far as dinner was concerned but it certainly didn't do much for his table tennis. His wife, meanwhile, the beautiful Lady Guenever,

had a more than healthy fascination for extra-marital liaisons, mainly in respect of Lancelot, the eponymous hero of this latest adventure from Level 9.

The game is roughly divided into three parts. In the first, Lancelot must find his way to Camelot to be knighted by king and cuckold-to-be Arthur himself. Much of this part of the game involves trudging round the dingy streets and alleyways of that famous non-existent town getting disgustingly filthy. If it's not the contents of slop buckets from bedroom windows, it's low-flying falcons. Understandably, King Arthur won't even see you till you clean up your act.

Chivalry's not dead, it's resting

As you might expect, there is no shortage of opportunities to exercise your chivalrous impulses. A journey by sea will take you to the fair Elaine, condemned to simmer naked as a needle in a bath of boiling water! This is not, thankfully, the game's only dubious encounter. Damsels (or 'damosels') are many, though some have the irritating habit of turning into horrendous fiends the moment lustful Lancelot gets amorous.

Indeed, in the final part of the game, it is moral as opposed to bodily cleanliness that assumes most importance. Lying, thieving and fornicating – of which there is ample opportunity – will do you no good at all. Or put it this way, it might do you some good but it won't actually get you any nearer to completing your quest. Only a virtuous knight can actually put his hands on the holy chalice.

The game contains numerous locations which

cumulatively create a vividly Arthurian world. Chapels and churches, castles and towers, rivers, wells and streams exist in a picturesque and varied landscape of meadow, mountain, forest and wood.

Points are awarded for displays of chivalry, valour or benevolence. Failure in any of these departments will also lead to points being taken away so that it is possible to end a session with a score as low as -590 points, depending just how morally bankrupt you happen to be.

The game permits a full range of commands, some of them the powerful ones already seen in other Level 9 adventures. GO TO and RUN TO (but particularly the latter) cut out the need to retrace old ground, whereas FOLLOW enables you to keep an eye on other characters who can, often by accident, lead you to important clues or locations you might have originally missed. UNDO, as the command suggests, brings you back from the dead or undoes an especially bad mistake.

Insufficient proof

The system commands permit BRIEF and VERBOSE modes of a text which is, for the most part, very well-written. 'Dusk began to suck the colours from the greying world' is just an example of how good the writing can be. Responses such as 'Verily restant' and 'Prithwe – turn to things of import' lends an appropriately quaint flavour to the game-play. Unfortunately, the text could have done with one more proof read what with one spelling mistake ('challenged' sic) and where, at one point, a character 'alts' from his horse.

Particularly impressive is the number of incidental characters the game packs in – urchins, damsels, monks, priests, pilgrims, soldiers, knights and so on. This, together with the excellent graphics, adds a great deal of atmosphere to the game.

The package comes complete with a map of the Arthurian world and a comprehensive playguide. The latter is designed with both the newcomer and veteran in mind and also has appended to it the story of King Arthur and the Knights of the Round Table retold by Christina Erskine.

All in all, Lancelot is probably the best adventure around at the moment on the PCW and the best thing produced to date by Level 9. It is both very playable and very entertaining. (A nice tip to have a ROUND the TABLE at (K)NIGHTS, eh ARFA?) ■

LANCELOT

PLUSES

- ▲ Rich literary source; faithful but not boringly so
- ▲ Powerful commands for short-cuts
- ▲ Atmospheric and well-drawn graphics
- ▲ Well-written text
- ▲ Plenty of incidental action

MINUSES

- ▼ Occasional bugs in the review copy
- ▼ Some puzzles lack ingenuity

MISLEADING CASES

In the High Court today Mr Justice Gleet summed up in the case of *Stupefying Software Ltd vs. Halbit*.

Members of the jury, the facts of this case have already been put to you several times by counsel, with such matchless eloquence as to render them in all respects unintelligible. Numerous weighty documents have been placed in evidence, and although these purport to be elementary "software manuals" devised for easy assimilation by the meanest intellect, it would perhaps not be wholly unjust to suspect that their meaning eludes you as it eludes me. Let me therefore strive to convey to you, probably for the first time, what this litigation is about.

Stupefying Software Ltd, as its managing director has informed this Court, is devoted to expanding the frontiers of knowledge, freeing mankind from mental drudgery, and (whether this be desirable or no) hurling its customers into the twenty-first century. To this laudable end, the company manufactures various useful computer "programs".

It is agreed that the defendant, Mr Alfred Halbit, purchased one such item, a light-hearted and diversionary game entitled *MegaRambo Nukefest*. Nor is it disputed, irrespective of the loathing with which one might regard it, that this was delivered in good working order.

Stupefying Software Ltd has consequently argued, with a smugness which you may or may not have found intolerable, that its part of the contract was amply fulfilled. Yet even the most bovine and slumbrous occupant of the jury box (I do not by this phrase wish to call undue attention to the snoring gentleman in the back row) must have dimly gathered that Mr Halbit disagrees.

The point at issue is an interesting and legally lucrative one, concerning as it does the unwritten aspects of the transaction. Let me strive to offer some examples sufficiently elementary for your limited comprehension. Were you, as a keen gardener, to order three tons of horse manure for the decoration of your roses, the technical fulfillment of this order would not impress you should the substance be unloaded on top of your car. Were you the proprietor of a

lodging-house whose regulations prohibited cats and dogs, you would not feel debarred from ousting a tenant who, while adhering to the actual letter of the law, had established a small colony of wolves and a puma.

You may ask whether these analogies have any relevance, but I hope you will not, since should you do so I would instantly order your committal for contempt of court. Mr Halbit claims that despite providing a superficially functional program, Stupefying Software has acted as unreasonably as the villains of my examples.

On receipt of his computer disc, Mr Halbit attempted to copy its contents for purposes of what is termed "backup". This process, the Court has been informed by authoritative if semi-literate expert witnesses, is to the computer user as important as life insurance, as psychologically vital as underclothing. You may therefore consider that on attempting to use his copy, Mr Halbit was rightly perturbed to be greeted with the message, "STUPIFYING SOFTWARE THEIFGUARD PROTECTON SYSTEM, YOUR ATEMPT TO DO ILLEGAL COPYING HAS FALED HA HAI!!"

Despite the anguish and distress of hazarding a "master" disk in actual use, the defendant was resolved to test his newly acquired educational product. This time he encountered the no less peremptory remark, "THIS PRODUCT IS PERSONIZED WAHTS YOUR NAME ?" Having typed his reply, he was ejected from the program with the derisive retort, "LEGAL USER !!". By trial and error, and (as he has told this Court) the application of considerable intelligence, the defendant deduced the humiliating need to type his name as it appeared on his receipt; that is, as "A HALBIT", in capitals.

Mr Halbit admits that his game thereafter functioned as advertised, displaying tasteful and graphically artistic nuclear detonations over the relevant tracts of South-East Asia. However, his pleasure was further muted by the fact that one-quarter of his computer's screen was effectively unused, instead showing the words, "THIS POGROM REGISTERED FOR; A HALBIT 299 MAFEKING VILLAS NW27 UNAUTHORIZED USE BY OTHER OR TRANSFER OF

A page in
the company
of author and
PCW pundit
David Langford

LANGFORD

LICENSE IS ILEGAL UNDER
COPYRIGHT ACT REPORT ILEGAL
COPYING TO STUPIFYING
SOFTWARE AT ONSE III"

The defendant claims to have felt deeply insulted.

Speaking for the plaintiff, the managing director of Stupefying Software has told the Court that without such basic precautions, Mr Halbit would be inevitably tempted to bulk-mail illicit copies to his numerous acquaintances, to advertise them for sale with criminally photocopied instructions, and to hawk them at less than cost on the streets of Singapore.

Here Mr Halbit's case strays from the broad paths of law and reason into the murky undergrowth of the controversial. Such prejudice and distrust, he alleges, left him thunderstruck. How, he movingly enquired until I was compelled to silence him, how could Stupefying Software imagine him capable of misconduct on this scale? His eyes having been opened to the corruption of the software world, Mr

Halbit made haste to stop the cheque he had sent to Stupefying Software and which through an oversight had not yet been cleared.

For, as he argues and you may feel bound to agree, if such untrustworthiness is indeed prevalent, how could Mr Halbit be sure that forged copies of his cheque would not be disseminated to numerous computer dealers, or hawked at large discount on the streets of Singapore?

You may think this reasoning disingenuous. Repelled and nauseated though you must be by Stupefying Software Ltd and its products, you may feel that the action for non-payment is justified and must succeed. However —

(At this point the jury, all coincidentally computer owners who had struggled with ponderously protected disks, found Mr Halbit not guilty without leaving the box, gave him three cheers, and begged that all costs should be borne by Stupefying Software.) ■

ANATOMY OF A PROGRAM

Steve Patient starts a new series telling you how to get your very own specialist programs written and marketed...

When computers first grew respectable, which in the commercial world means on the day someone agreed to actually pay money for one, the father of computing Alan Turing said that six machines would be enough to service all the computing requirements of Britain. With hindsight this opinion sounds just a little naive – we know better. But he had the figures, not six, of course, but the hundreds of thousands of pounds the machines then cost, on his side. In those days a few hundred thousand pounds would buy large chunks of some third world countries.

Getting the computers to perform the feats the salesmen promised meant mortgaging the other half of the premises to hire programmers; and these tended never to move out. In those early days the cost of programming the machines often matched the cost of the machines themselves. Not only were the initial costs high but the programs needed constant minor tinkering as well as major kludges at regular intervals. A big computer in those days might have been called many things but never user friendly.

The success of the modern micro is due in no small part to customers being able to buy software off the shelf to solve almost any problems they might have. But this standard software is only there because of computer hardware and operating system standardisations: though the PCW's 3" discs and CPM operating system are an old standard, at least they're standard. Having a large number of identical machines on which to run the programs allowed the programmers to provide general solutions to the standard problems, like word processing and data handling, and spread the costs over the whole user base – because LocoScript suits nearly everyone, the consequent opportunity for mass production makes it laughably cheap.

Exotic problems

This would be all very well if nobody ever managed to think of another way to use their machines; but they do. So what happens if you need to solve a more exotic problem?

In many ways the success of the PCW machines has highlighted this aspect of computing. PCWs are really the first complete computer system with the kind of power demanded by business to be sold at a price home users can afford. Since few home users are actually running a business one of the effects of this has been to throw up a great many odd requirements. If 8000 Plus's mailbox is anything to go by PCW owners are constantly searching for ways to make their system perform functions the designers hadn't foreseen.

So, let's take a typical PCW user, a retired clergyman interested in becoming the first person to breed a pink budgerigar. His rooms are full of breeding cages, birds on special diets and birds in transit from other enthusiasts. The

If you use your PCW for a specialist application – and most of us do – no piece of software can do exactly what you want. You may well find it worth while to get a program written specially for you for that purpose – and having done that, you may well find it worth while marketing your program to others in the same business or with the same interests. But how do you go about it all?

Land of milk and money

How much does it cost to have a program written by a professional? The answer is always too much. In the days of Cobol and Fortran programs were charged by the line, the situation is more fluid. In the case of a large program a business or government department would have a preliminary study prepared and put the work out to tender. Taking on rather smaller example there are two approaches to the problem.

The clergyman might pay for the whole thing and buy the copyright on the finished code, which will be expensive since there is

no way a programmer is going to charge less than whatever they see as a living wage, probably five to ten pounds per hour over several weeks depending on their expertise.

More realistically, the programmer would charge a sum sufficient to defray their initial expenses and keep the rights to the program, hoping to sell it to other budgerigar breeders in the same situation.

In reality the second option is the only viable one, and if the programmer does it they can make more than the one sale they probably wouldn't consider the perfect solution.

piles of paper in which he has hitherto kept notes on breeding cycles, dietary requirements and on which phases of the moon particular birds are introduced to each other now threaten to overwhelm him.

In a moment of lucidity he reaches for the dusty PCW on which witty sermons were once composed wondering if LocoScript will provide the answer; unfortunately it doesn't. Fine for letters and lists, but it can't do what he wants, ie. work out the ideal phase of the moon for introductions based on past breeding records. He needs new software.

Trundling along to the only shop the village boasts, a general store, he examines the software on offer. The proprietor, who doubles as postmistress, tells him that she has no budgie breeding programs and isn't sure any will be available – there's no call for it she says sadly, returning dBase II to the shelves alongside the cat litter. He will probably have to get some specially written. Exit sad clergyman – and it seemed such a good idea.

For most people, the thought of having software written – sometimes miles in the trade as commissioning a program – may seem a little daunting, but it isn't bad if you go about it in the right manner. Mostly, people don't.

When those unfamiliar with the computer industry mention that they need software usually somebody keen will offer to do it, a friend, or an enemy perhaps; someone who

Defining 'Definition'

- 1 – State the objectives of the current system
- 2 – Document the current system to see how well it's doing
- 3 – State any new objectives the proposed new system will have to meet
- 4 – Note any constraints on the new system eg. cost of implementation
- 5 – Note all details of user requirements, data elements, data volume etc.
- 6 – Prepare software specifications – to include inputs and outputs
- 7 – Produce a report and agree the specification is complete.

has written a program in BASIC to calculate their average mileage which only takes four times longer to use than a calculator. With a sigh of relief our clergyman sinks back into his armchair convinced that the problem is in hand...

Over the next three weeks he sees nothing of his friend until the man drops in one evening to announce that he's finished, proudly plonking a disc on the coffee table with self congratulatory noises.

Three classic mistakes. The first is that there was no mention of exactly what the program should do; the second is that there is no documentation and the third is the ludicrous idea that he's finished. (He might be finished as a programmer but that's a different story.)

The software will not run, if it does run it will do so as well as a three legged dog and anyway, it will not perform as the clergyman requires. All these things are certain. The kind of program intended for use by others needs to be written as part of a larger discipline.

Flash system

This discipline is called Systems Analysis and divides nicely into six phases.

- 1 - Project Selection
- 2 - Feasibility Study
- 3 - Definition Phase
- 4 - Design Phase
- 5 - Implementation Phase
- 6 - Evaluation Phase

In a large project all of these phases would be quite separate and many of the people involved specialists in just one part of it. In a small project the programmer would probably perform all the separate functions and perhaps telescope some of them together. This is no problem as long as every part of the process is there. We will now enjoy a quick overview of each phase.

The Project selection in our imaginary case has already been done by the customer. The budgeter enthusiast is looking for a solution from the computer world. This, in itself, is no guarantee that the programmer can provide one.

The Feasibility study is often neglected on the grounds that 'Yes, of course we can do it'. That a thing can be done and whether it *should* be done are two different animals. Feasibility includes determining whether or not a computer based system is the best one; would budgie feathers get in the disk drives? It may well be that the cleric in question needs no more than a sensible card filing system and a page a day diary. If the feasibility study indicates that a computer program isn't the best way to tackle the problem, and the programmer isn't desperate to have his children shod, then he should stop right there and explain why. In the long run bad solutions do not win brownie points.

The feasibility study will inevitably spill over into the Definition Phase, which should be *fully* documented. Just like a builder's estimate, it is there both to define the extent of the work and protect both sides in the event of dispute. The important parts of the Definition are in the box marked Definition. This is by no means adequate for a large project but will do for Budget Budgie Breeding Plus.

The report, especially the parts stating the design objectives, should be understood and agreed by both parties before going any further. At this point it's easy to add a codicil noting that an extra facility has to be included for tracking quarantine periods on imported budgerigars but it might not be so trivial once the coding starts.

Design of the times

By now our clergyman has had a programmer hanging around the place upsetting the birds for several days and so far the chap hasn't even turned the PCW on. By now he may even be beginning to wonder if the chap knows how to do it, but have no fear, this is a good thing; the programmer has to understand the scope of the job. At last he's reached the Design Stage. Pulling out a large ruled pad and pushing several budgerigars off the end of the desk he sits down and begins writing, again.

This time the documentation is for the actual program. Note how a real programmer produces his documentation before he starts writing code, in some cases even before he decides which language to use. It would take too long to go into detail here on this part of the process, but once again he will produce a report which stays with the customer.

Finally, the PCW gets turned on, and the programmer begins to code up the software in accordance with the design document. This stage, Implementation, is where all the code gets written, a good attempt is made to debug it and the user documentation is completed.

When all this is finished the programmer will climb out of the chair and the clergyman climb into it. The programmer supervises the change over to the new computerised system making sure that the clergyman understands it and is using it properly. If everybody concerned agrees that the system is performing as agreed then the Programmer submits his invoice and most of it is paid. Not all, because there is one final stage.

Evaluation: some bugs will show up in the first few days or weeks; this is inevitable with any software. Maybe the program expects all budgies to be part of a breeding pair and can't register a single budgie without demanding the name of its mate; maybe it just stops working inexplicably if you enter 'green' as the colour of one of them. These will be fixed as found, and the final amounts paid over. The Evaluation part of the Definition is for the benefit of the programmer as much as the customer. If the programmer performed the early parts of the work correctly there will be no problems, but there might be an improved ('upgraded') version later on. ■

THOUGHT TRANSFERENCE

Being the second of Alec Rae's informative and entertaining articles on the Cambridge Z88: how to transfer files to your PCW

One of the dreams of all great thinkers is to be able to capture their every priceless pearl of wisdom as it flits like a butterfly through their brain, no matter where they are. Tucking a Cambridge Z88 portable computer under your arm makes that dream come true no matter where they might "wander lonely as a cloud"...

Putting information into a Z88 is easy. Just press the two [SHIFT] keys, press [SQUARE] and P (for PipeDream. We don't know why the word-processor is called PipeDream. You just have to accept it) and start to type.

When you have immortalised the vagrant thought you can save it to file ([DIAMOND] F(ile) S(ave) and supply a file name when prompted). If you still have a bit of work to do you can leave it as a 'suspended activity' - something that remains there and can be called up immediately just by re-entering PipeDream.

Even if you switch off (the two [SHIFT] keys again) the suspended file will still be there waiting for the last line of your sonnet, or whatever, until you are once again visited by the muse. The only nagging worry with suspended activities is that the work is likely to get lost if anything goes wrong and you have to reset the machine.

However genial are not noted for their modesty. What is the point of creating faultless verse if the only way other people can read it is by handing your Z88 round the company and showing them how to scroll down the tiny screen?

The great escape

If you ever wonder what all the ESC or escapes that are often littered about computer manuals ESC is simply a code that tells the computer that the next thing that is typed in is a command rather than a letter. You can get it by pressing the [EXIT] key on the PCW or the DIAMOND in the Z88.

Where's the printer?

This is where the concept of the Z88 could be thought to have come slightly unstuck. Z88 owners without a PCW would have to consider buying a printer if they want to print out the latest version of their play, tentatively titled Hamlet, Prince of Chiswick, and that could cost more than the computer. Then you've got the problems of hooking up the Z88 to the printer.

Since one of the major reasons for the popularity of the PCW series is that they come bundled with a printer at a very reasonable price all PCW owners need to do is buy an RS232 (the box that sticks into the expansion port at the back of the PCW - about £50 - it also enables you to do things like connect alternative printers, modems and so on to your Amstrad) and a £10 cable to connect the two computers (the Z88 has its own inbuilt serial port taking a 9 pin DIN female connector).

Always switch the PCW off before fitting on the RS232 (it can have drastic consequences if you don't, such as blowing up the microprocessor on the PCW) but from then it is the work of a moment to set things up and make the transfer. It does mean tackling all those complicated comms type things like baud rates and parity but it's not really as difficult as it sounds.

If you want you can use a special comms program (like the comms section in the Mini Office suite of programs, for instance, or MEX or Dialup or Chit Chat...) or you can even buy a special transfer kit with a cable and software specifically to transfer data between PCW and Z88 (C Port make one - details from them on 01 376 5098. Price £24.95).

However it is perfectly feasible to do it without anything fancier than the Import/Export section on the Z88 and faithful old PIP on the PCW.

We have an understanding

First it is important to make sure the two machines are talking to each other in the same way at the same speed. Luckily enough both computers naturally want to transmit and receive data at the same rate (9600 baud, or in English, approximately 960 characters a second) so unless you have changed the setting for some other reason you won't need to change that parameter.

Call up the control panel on the Z88 (with the easy to remember keystrokes

[SQUARE] and S) and you will see the current serial port settings. The

WIN WITH COURSEMASTER THE COMPUTER HORSE RACING PROGRAMME

NEW

- * RATES ANY RACE IN SECONDS - ANY DAILY NEWSPAPER IS ALL YOU NEED
- * NEVER OUT OF DATE - Both N. Hunt and Flat - Fast data entry
- * AMAZING ACCURACY !!! - Now you CAN BEAT THE BOOKIE !!!
- * Works on the simple principle that **EASY HORSES BEAT SLOW ONES** !!!!
- * Clearly identifies best selection in every race plus the **AMAZING** Features -
- * First, Second and Third choice shown for forecasts and Tricasts etc. Recommend most suitable type of bet.
- * Actually works out your WINNINGS on most popular bets including SINGLES and DOUBLES, win and each way, PATENTS, YANKEES, CANADIANS, HEINZ etc. Good EACH WAY and LONG ODDS bets clearly shown
- * Will PRINT out your BETTING SLIP for you
- * Maintains a BANK ACCOUNT - BET LIKE PROFESSIONALS Do!
- * PLUS !!! - **THE AMAZING COURSEMASTER SYSTEM**. Try it! Can pay for itself many times over on the first day!
- * Supplied with 20 page BETTING GUIDE and MANUAL.

FREE HOT TIP OF THE MONTH TO EVERY PURCHASER

Available for IBM PC £18.95 (State Disc Size). Also available for Spectrums etc. (one + 3 disc version) Commodore 64/128 Sinclair QL, (add £1.00 for software) Amstrad CPC, all PCW's BBC and Electron All For £18.95 inc Post + packing (Disc sizes please add £2.00 for disc)

£ PROFIT FROM YOUR MICRO YOUR OWN SMALL BUSINESS USING MICRO

- * WHATEVER your MICRO is you can use it to make a good income! Even if you only have a couple of hours spare each week!
- * We have put together a package of easy, sensible and practical business ideas which can easily be used by anyone with any micro. No computer expertise required!!
- * Earn ££'s from home doing what you enjoy doing - using your COMPUTER! It doesn't matter which model.
- * You probably already have all you need to start earning.
- * THOUSANDS of potential customers in your area who will GLADLY pay for your services. We will show you how to find them!

Full step by step guide to EARNING MONEY FROM YOUR MICRO.
FREE BUSINESS IDEAS CASSETTE TAPE WITH EVERY COPY. £12.95 inc p&p

Graphic traffic and solitary pursuits

GRAPHICS GENERATOR

by John Bilton

In October's 8000 Plus we showed you how to design and print out any graphic in BASIC, Protext or Mini Office. Now John Bilton has used Larry Simon's plot routines (August issue) to automate all this.

Run the program and make your design on a 32 by 16 grid. The cursors move a marker about the grid while F and E fill and empty squares. 'S' prints your design and 'D' prints DATA followed by the numbers required to form the character.

You can then use them in a BASIC listing:

```
10 odd$=CHR$(27)+"L"+CHR$(15)+CHR$(0)
20 even$=odd$
30 FOR j%=1 TO 32:READ d$:odd$=odd$+CHR$(d%):even$=even$+CHR$(d%):NEXT j%
40 DATA (nos. in the first data statement)
50 FOR j%=1 TO 32:READ d$:NEXT j%
60 DATA (nos. in the second statement)
70 LPRINT odd$; CHR$(27)+"J"+CHR$(2)+CHR$(13); even$
```

This works for a graphic two characters wide. Do wider designs in parts. For a three double-characters width graphic, replace the '32' in lines 30 and 50 above by 96. The first DATA statement in the above would hold the first lines of numbers together from each DATA statement for the three parts of the graphic as determined by the listing below. The second would hold the three second lines of numbers put together.

To incorporate the graphics in a Protext document, put the stored command >oc 27,76,32, followed by the numbers of the first line. On the next line >oc 27,74,2,13 then on the next oc 27,76,32, and the second lot of

numbers. For a three double-characters width graphic, replace the 32s by 96s; run the figures from the first three lines of the DATA statements together for the first Protext line of codes, and the three second lines together for the second.

Similarly for Mini Office. The equivalent of '>oc' is [SHIFT][ALT]x; precede all digits by[ALT]. Build up large graphics line by line. ■

SOLITAIRE

by Leslie Cowley

This is a rather attractive implementation of the old fashioned game of patience, Solitaire. On running the program a graphic representation of the solitaire board fills the screen and a prompt asks for your moves. To play Solitaire you must take marbles from the board by leaping over an adjacent piece into

an empty square. The aim of the game is to get down to a solitary marble in the centre of the board.

There are apparently a great many solutions. If anyone knows the actual number we'll pass it on.

```

Enter number to move FROM -? ■
or 'end' for new game

How to type in a listing

Load up Mallard BASIC - to do that, insert your CP/M disc, reset the machine and at the A> prompt type BASIC[RETURN]. Now you see the 'Ok' prompt. Just type in the lines of the listing exactly as they are printed on the page (but not the numbers on the extreme right). Type LIST at any time to print out your typing so far to the screen; if you want a printout to pore over, type LIST.

Mistakes made before you press RETURN can be corrected with the DEL keys, otherwise you have to use the line editor. Suppose you've made a mistake in line 100; type EDIT 100 and then you can use the cursor keys and DEL keys to correct it. Press RETURN when the line is OK. To delete a line, type its number only and

press RETURN.

When you've finished, save the program to a disc by the command SAVE "FRED" (or any other suitable name of eight letters or less). To run the program, type RUN.

Programs rarely run first time, but when BASIC encounters a mistake it tells you where it is. 'Syntax Error in line 60' means a mistake in that line (though the actual typing error may have occurred in a previous line, causing problems in this one). Other error messages can often occur too. Use the EDIT command to correct it.

You can rerun the program another day by loading BASIC up as before and, with the disc on which you saved the program in the drive, typing LOAD "FRED" and then RUN.

```

No Backlight on the Z88 ?!

THROW SOME LIGHT
ON THE MATTER!

With

Aware Technology's
SUPERTWISTALITE

JUST £13.95 inc.
P&P or £15.95 with a
PCW Disc FULL OF
GOODIES!

Aware Technology's **SUPERTWISTALITE** is stylish, sturdily built, articulated, BLACK and is securely held in place on the Z88 by a self-adhesive Velcro strip (supplied with the unit). When not in use simply fold the **SUPERTWISTALITE** up and tear it off.

The unit runs on the ubiquitous 4 AA size batteries and comes with a lead to provide emergency power to the Z88 when those rechargeables that everyone tells us not to use play dead.

Not only that - Aware Technology's **SUPERTWISTALITE** illuminates the keyboard as well as the display and comes complete with a built-in copy holder clip. What more could you ask?

Since Christmas is coming and we want your custom, we're offering a disc full of PCW/Z88 goodies with each **SUPERTWISTALITE** ordered for a measly £2 extra - i.e. less than the cost of the disc! Come to think of it, it's more like giving away the **SUPERTWISTALITE**.

Amstrad Training - £29.95!

With so many organisations trying to sell you training courses, you need to be selective. And if price is important too, the choice is simple - you need Reel-Time.

No other training course can offer: personal tuition; disk-based tutorials; a full set of course notes on disk; and a wealth of practical extras, all for just £29.95+VAT.

Best of all, your Reel-Time course is delivered to you pre-recorded on audio-cassette and disk. The whole course is yours to run on your own computer, at your own pace, and repeat whenever you like.

PC range: • Amstrad PC (1512 & 1640); • IBM/Comps (PC/XT/AT); • SuperCalc (for 3 & 4); • dBase II; • WordStar (3.3); • Desktop Publishing;
PCW range: • Amstrad PCW 9512 (& Locoscript 2); • Locoscript (PCW 8256); • The PCW Computer (for 8256/8512); • SuperCalc 2; • dBase II; • WordStar Professional (3.3); New Word 2.

Pascal and Fortran compilers Professional quality for £49.95

The AMSTRAD PCW is a great word processor! With Prospero Pro Pascal or Pro Fortran you can make it into a great personal computer!

The AMSTRAD with Pro Pascal or Pro Fortran is ideal for School and University use, for problem solving, and for learning about computers. Pro Pascal is used by software houses, universities, government departments and industry worldwide. Pro Fortran is used for technical computing by engineers, scientists and researchers.

Prospero's CP/M compilers are ideal for the CPC 6128, the PCW 8256 and 8512, and 9512 and come with a comprehensive manual. If you already have a Pascal or Fortran compiler, why buy these? Simply, because they work. They are reliable and fast; the programs produced are tightly coded. Pro Pascal is validated to ISO 7185, the international standard for Pascal, so you can be sure

it works. Pro Fortran conforms to ANSI X3.9 1966 - the spec for Fortran IV or Fortran-66. You can transfer any program you have written using many other Pascal or Fortran compilers with a minimum of fuss. Once you have written your program you can transfer to other machines like the IBM PC or Atari ST using another Prospero compiler. And if you have access to a mainframe or minicomputer at work, you can run your program on those. That's what we mean by Portability.

If you want to know more about how Prospero Pascal and Fortran can provide you with the best route into programming on your Amstrad PCW phone us in London on 01-741 8531.

Ordering Information: Credit cards accepted for telephone orders. Or send £49.95 + £2 p&p (+ 15% VAT in UK) for each compiler to Prospero Software Ltd, Dept. 309, 190 Castelnau, London SW13 9DH, England, saying which compiler you require.

AMSTAT* & STATMODE

MODULAR STATISTICS AND MATHEMATICS PACKAGES

MARKETED BY

S. C. COLEMAN LIMITED

AMSTAT for PCW & CPC

STATMODE for PC Compatibles

AMSTAT 1/STATMODE 1: means, std. dev., variance, skew, kurtosis, 1-sample, 2-sample, and paired t-tests, 1-way-ANOVA with single and multi-comparisons, 2-way-ANOVA, correlation, regression, histograms, scattergrams, trendlines, line plots and error bars, output to HP file, manual, flexible variables and observations to a total of 500 (+) data points (12000 STATMODE).

AMSTAT 2/STATMODE 2: 27 nonparametric tests providing a "complete package" (Binomial, Chi-square(3), Kolmogorov-Smirnov(2), Runs, McNemar, Sign, Wilcoxon, Wald, Randomization(2), Fisher, Median (extension), Mann-Whitney, Wald-Wolfowitz, Moses, Cochran, Friedman, Kruskal-Wallis, Contingency, Spearman, Kendall, Kendall partia), noncorrelated.

AMSTAT 3/STATMODE 3: FORECASTING

An array of business oriented mathematical and statistical software: Linear and Polynomial regression, Trend and Seasonal Variation, Multiple Regression Analysis, Transformations, Exponential Smoothing, Adaptive Filtering, Graphic display, full presentation, manual suitable to immediate use and for teaching. (Additional program for PC).

AMSTAT 4/STATMODE 4: RESOURCE MANAGEMENT -

LINEAR PROGRAMMING MODULE
General Purpose Linear programming - Specialised Transportation and assignment variants. Capable of analysing and solving problems of resource scheduling, blending and allocation of scarce resources. 40 Page manual, 18 worked examples

AMSTAT 5/STATMODE 5: STANOVA

Up to 8-way analysis of variance for equal cell sizes. Unequal cell sizes on 1-way ANOVA. Maximum of 2000 data points (300 on unsequenced CPW 2.2, 4000 on PC). Input from ASCII Files. Output to screen or text file with full table effects. Manual (Disc only).

AMSTAT 6/STATMODE 6: RESOURCE MANAGEMENT II - STOCK AND PRODUCTION ANALYSIS
Calculation of economic order quantities for both single and multiple items. Dynamic programming to calculate optimum production schedules for simple items and consolidation of several items to multiple quantities. Also Pareto and Lorenz analysis. Output to screen or printer. Includes operational manual with worked examples.

The programs have applications in research of all kinds, education, sales, production planning, work method study, financial planning, personnel, social work etc.

"I will certainly be using them myself in the future and no reviewer can offer a warmer recommendation than that." Dr. Peter Morris, *Amstat Professional Computing*, May 1981.

TIPOFFS

For Tetris widow(er)s

If you think your partner is playing 'Tetris' too much, put your name in the high score table as things like [EXIT]x. The printing positions on screen go haywire, ruin gameplay until you start from scratch again, and should persuade your partner to finish off at last and go to bed.

Emma Cooper
Epsom

What's a footnote

Everyone produces academic papers books or technical reports knows how tedious footnotes are. There are two main problems. First producing consistent presentation of the references. The main hassles here are things like remembering to put a comma after the authors surname etc. Second is the tedium of having to go through renumbering all the footnotes when you decide to add or delete perhaps only a single note. Tipoffs in issue 24 (Sep 88) showed how to do footnotes in Mini Office, Protext and LocoScript.

If you have LocoMail, you can get your numbering done automatically. First of all, where possible, list the references themselves in a separate document. These pages can be numbered to follow on from the main text document using the Disc Manager [F5] process. By using a suitable LocoMail loop with appropriate prompts, you can arrange for the document to ask for information and then insert consistent punctuation automatically. The details of this depend upon your chosen style but the Locomail user guide contains examples of other Locomail applications which can be easily adapted to this purpose.

Second, instead of putting in a

number each time you add a note, make a phrase of the following under F and paste the phrase in instead: (+Super) (+Mail) +F (-Mail) (-Super). This can be added to the PHRASES.STD file and loaded with your startup disc.

Then add to the beginning of the document (or store in your template for this type of document) the following Locomail command:

```
(+Mail)F=0(-Mail)
```

When you've finished the document, make a copy of it using [F3] and then fill the copy using F. LocoMail will now increment and then print the superscripted number every time it meets a +F inside mail codes. When LocoMail has finished choose the 'save result' option from the menu.

If you now need to add or delete footnotes, instead of changing all the numbers, simply make the relevant changes in the original unfilled document, adding or deleting the +F's as required.

Copy the document again and fill the copy. The footnotes are renumbered for you. Keep the references themselves in a separate file; update them similarly.

To number footnotes across different documents, the initial command is (+Mail)F=6 (-Mail) or whatever other number to start at. Locomail isn't just junkmail!

Ian Ground

Heaton, Newcastle upon Tyne

File type

Here is a good way to get a quick list of what's on your discs in CP/M. Press [ALT]P (it beeps to confirm) to send screen output to the printer and then type `disc 1`, or whatever you call your discs (it mustn't be a file name).

Now type **DIR** and watch all the file names print out. Repeat this for as many discs as you like and then

press [ALT]² again to stop this 'printer echo' (the PCW confirms this by not beeping!) You now have a printed list of the current state of your discs.

Donald Sawyer
London

What a ham

Radio amateurs send each other QSL cards to confirm contacts. These are usually printed out on thin card. Because the PCW can't print in the top six lines you can't fit two on an A5 sheet this means making the cards smaller or wasting a lot of card. If, however, you put twenty or so carriage returns first before beginning printing, you can then

take the sheet out and feed it in the other way around before repeating the process. There is now little wasted card. This technique can be used in other similar situations.

CW Harratt
Cheshire

Hold the front page

In Stop Press you can take a 'snapshot' of whatever is displayed on the screen and move it into the Canvas area. The image can then be processed or saved as a cutout.

Load in the screen you wish to copy, press [PASTE] then the Cancel key on the mouse or the [9] on the keypad. The screen should now be copied into the Canvas.

Whatever was there before is lost. Sometimes this method doesn't

the spreadsheet then select the Alter Spreadsheet menu. Go into the Print Spreadsheet menu and select the required settings (you'd normally select 'None' headings) and finally either Print whole sheet or Print Window.

Now the interesting stuff happens. The printer will remain silent but the disc will whirr as the PUT utility redirects all the output which should have gone to the printer and sends it to disc instead.

When the disc stops and the lights go out quit the spreadsheet, [EXIT] to CP/M and at the A> type PUT PRINTER OUTPUT TO PRINTER to restore normality.

Go into the word processor of your choice. Simply load the file ANYNAME.DOC (or whatever you called it) and the spreadsheet appears. The garbage at the beginning and end can be deleted. In LocoScript, you have to 'Insert text' into an existing Loco document (while editing press [f1] in Loco 2, [f7] Loco 1, then select ANYNAME.DOC from the disc management screen).

Mark A. Fullerton
Merseyside

“An extra PCW for just £25^{*}”? Well, almost.

FLIPPER splits your PCW in two. You can run LocoScript 2 in one half and a CP/M program in the other. Or you can run two CP/M programs, one in each half. Either way, you can **FLIP** from one half to the other in under 3 seconds, any time you want – and you won't lose your place when you do. In fact, it's exactly like having an extra PCW for just £25. Apart from the 5p change, that is.

FLIPPER. Only £24.95, actually

* 8000 plus, October 1988

Please send me **FLIPPER** for my:

8512 [] • 9512 [] • 8256 with 256K extra memory []. I enclose a cheque / postal order for £24.95 made payable to Software Imperative
(Price includes UK postage and packing. Sorry, **FLIPPER** does not run on an unexpanded 8256)

work, for example when you are using the pattern designer. The following procedure then copies the screen: move the mouse over the 'exit' icon then press 'execute', 'paste', 'execute'. Sometimes the [COPY] key next to [PASTE] should be used.

Stephen Agate
Surrey

What a card

Forgotten a birthday or Christmas card? You can knock up jokey home-made cards on a PCW if you have a graphics program or a desktop publisher. Even Loco-

Scripters can try something.

Make a design on a sheet of A4 with the paper split into four equal sections. In the bottom right quarter put the design to go on the front of the card. You can make it suitably sincere, humorous or insulting. In the top left put the text message upside down.

How you achieve it depends on the package you have. In Stop Press you can prepare the cover and rotate it to the correct section of the page, put the text and print out the whole thing in one go.

Otherwise you'll probably have to print the first quarter, reinsert it to face the same way as before and

The key facts

BASIC users can make things much easier for themselves by using SETKEYS to redefine the keyboard. With the following set up you just type SETKEYS BASIC.KEY before going into BASIC, then commands like LIST, RUN etc. can be done with one key.

Load up CP/M as usual, type BASIC[RETURN] then at the Ok prompt RUN "PIP[RETURN]. Insert your BASIC work disc and select 'new screen'. Give the name as BASIC.KEY. In the screen that then appears type the following. You can use the cursors and delete keys as normal and [CAN] removes lines. [EXIT] to finish. The ^ (up arrow) is [EXTRA]:

```
12 N ""*182"" PAGE=LIST
27 E ""*185"" EXTRA P=print
35 E ""*188"" EXTRA I=input
36 E ""*180"" EXTRA L=lprint
3 N ""*19A"" PASTE=BASIC
4 N ""*190"" PARA=dir
11 N ""*186"" COPY=print file
51 E ""*198"" EXTRA T=then
59 E ""*19C"" EXTRA W=while
7 N ""*190"" grid key=cont
75 N ""*19B"" CAN=wipe screen
```

```
E #82 "LIST "M"
E #85 "PRINT "
E #88 "INPUT "
E #8D "LPRINT "
```

print the second quarter.

In Electric Studio's Art you have to prepare the cover and inside message separately. In LocoScript you can try building up a design from the characters in Loco 2's extensive set, use Locochar etc. End the page with [ALT][RETURN] and on the new page

do your message again in the lower

right-hand quarter. Print the first page, re-insert the piece of paper upside down and facing the same way as before, and print the second page.

After you print out, fold it in half horizontally, then vertically: hey presto! If you have coloured A4 paper then so much the better.

Basil Pigg
Devon

in the line you are writing.

If you only want some of the functions above, you can leave out the ones you don't want. Leave out lines paired by the numbers after the # sign: if you're not bothered about [PAGE] producing the word LIST for example, leave out the line 3 N ""*19A"" PASTE = BASIC and the line E #9A "BASIC "M".

To customise it to your own needs, proceed as follows. Suppose you want [EXTRA]: to produce RUN[RETURN]. Looking at your CP/M manual page 109 (page 544 if you have a 9512) you see that the number associated with the R key is 50. Select one of the items in the list above you don't want; say [COPY] printing out a file. Run up RPED as before but select 'edit existing screen' giving BASIC.KEY as the screen to edit. Using cursors and delete keys go down to the appropriate line (the 'print file on copy' line) and change the 11 (looking at the CP/M manual again you see that 11 is associated with [COPY]) to 50, and change the N (for normal) to E (for extra). As it stands now, pressing

[EXTRA] will produce PIP LST:= you must also change the line 'E #86 "PIP LST:=" as well. (E #86, because that's the number in the

line just changed).

Change it to E #86 "RUN" M" — the up arrow and M represents a press of the [RETURN], so if you just wanted the word RUN typed without a [RETURN], miss that bit out. If you want a double quote to be reproduced, type it in as ^".

You can do this for any combination of [SHIFT], [EXTRA] and [ALT] with any key to produce any string you like. Replace the N in the above by S, E or A respectively, the 11 by the appropriate number associated with the key you require as shown in the CP/M manual, and the string in the right E #(something) line to the text you want — remembering that up arrow-M if you want a [RETURN]. The text at the right hand side of those first eleven lines is purely comment and is ignored; you can put nothing if you like.

[EXIT] saves the amended version of BASIC.KEY. Running one setkeys file after another can result in odd happenings; it's best to restart from scratch. There's also a limit to the length of messages you can put in the 'expansion tokens' in the list of E's.

Robin Allott

CHIBASE 3.0

MAJOR ENHANCEMENTS AVAILABLE NOW

CHIBASE Can now convert an entire word processor file into a database
CHIBASE Now lets you 'Browse, search and select' records from large word processor files

CHIBASE Can now split Databases if they become too large
CHIBASE Now shows you the names of your disc files
CHIBASE Now has more menus and more options yet is just easy to use
CHIBASE Still has all the old features:

- Editor To create/modify your free text records
- Keywords in the text highlighted on-screen
- Database functions Store, Recall, Amend, Delete
- Recall records by just typing in a list of keywords
- Amend a record: just Recall, Edit and then press the 'amend' key
- Sort To let you view recalled records in sorted order
- Select To let you go straight to any recalled record
- Index listing Shows you all the keywords on the database
- Forms (optional) make text entry even easier
- Comprehensive indexed manual
- Questionnaire for you to express your views

REMEMBER!

CHIBASE Is the only complete free-format text database system at this price
CHIBASE Is easy to use: no complicated syntax to learn
CHIBASE Has NEW, powerful facilities to import word-processor documents
CHIBASE Comes with a questionnaire: your views count!
CHIBASE Is fully supported by the author
CHIBASE Works with PCW8256, 8512, 9512 (Sort/select requires 512K RAM)

PRICES £49.95 INC.

MAKE YOUR AMSTRAD EARN!

Yes making money becomes incidental when you know how. Your micro is, if only you knew it, a gold mine. The size and make is irrelevant. Make the initial effort. NOW by starting your own HOME BASED BUSINESS.

This may be the most important move you will ever make!
REMEMBER: You'll never get rich by digging someone else's "ditch". Anyone in the country, including YOU, can become very rich in a relatively short period of time just by doing a few basic things! It's more rewarding than playing games. The benefits are many and varied. Full or part time. For FREE details send S.A.E. to:

CHRISTMAS
CHARACTERS
on
TempDisc 2D & 8

TempMate - A grid on clear acetate. Simply place under a form or letterhead and *instantly* seen are margin, tab and line positions for the entire page. Eliminates trial and error, waste paper and bad language. Size 10 or 12 c.p.i. **IT'S SO EASY!** "Excellent... there are a number of aids like this on the market but this is the best I have seen... a simple idea that works well" *Amstrad PCW Magazine August 87*, "extremely useful" *BBC Ceefax 1986*. *NEW* Mini Templates for 'those 6 Holed Planners.

Page Boy - The clear PVC ruler that measures text at 10, 12, 15 and 17 c.p.i.
TEACHERS AND WORD PROCESSING TRAINERS: Both TempMate and Page Boy are also **essential teaching aids** and ensure the learners quickly 'bridge that gap' of mystery between screen presentation and printer output. Quantity discounts available.

LOCOSCRIPT USERS - IT'S SO EASY!

TEMPDISC - A data disc of Instant Templates. After "loading" Locoscript replace the disc with TempDisc and press key (F7) = Locoscript 2 or (F1) = Locoscript 1.

"The Author is eminently qualified... mastery he has acquired shines through in TempDisc... instructions are clear and precise... excellent investment"... Comp with Amstrad PCW (Sept 87)
OPTIONS: TempDisc 1D (Locoscript 1) & 2D (Locoscript 2) both double sided, 2D has 12 Christmas Keys i.e.

1D, 2D & 9 all include 88.89 calendar & diary and layouts for those six holed planner pages! School options.
TEMPLATES to order! LOCOSCRIPT TUTOR.

PCW9512 OWNERS!

TEMPDISC 9 - 670K USED. Over 670k used PLUS Locoscript FILL and MERGE including 12 invoice options, simple calculations, analysis sheet with column & line totals, 2-way 28 choice menu conversion Knock Out chart (puts competitors into drawn positions, places seeds and byes) future lists, numbered tickets.
IT'S SO EASY

NEW PCW8512 OWNERS!

TEMPDISC 8.2 For Locoscript 2+ Locoscript users. a double-density TempDisc for Drive B of the 8512. It includes all the features of TempDisc 9 PLUS the 12 Christmas Characters from TempDisc 2D.
514k versions of TEMPDISC 8.2 and 9 are now available.

**INSTANT
TEMPLATES**
TempDisc

IT'S SO EASY! Simply replace the disc with TempDisc and press key (F7) = Locoscript 2 or (F1) = Locoscript 1.

PLUS TICKETS AND DISC LABELS
FOR AMSTRAD PCW COMPUTERS

'DOUBLE T' PATIENCE

TT Patience offers 512 games of Playing Card Patience for all PCW owners. Four of the games are not widely known and include 'KILLIA LUMPIE' a trickier game, thus named because it was the most addictive of the games Governor of KL prison when entertained in his own camp during World War II.

'STOP PRESS'

NEW! Available from Thurston Techniques Qualified F.E.d. teacher Brian Thurston, has now completed new disc tutorials for Minerva Software 'Learn Locoscript for Locoscript 2' D2B 8 (Teaches Locoscript within Locoscript) 'Typing for Locoscript 2' D2B 9 (Touch typing tutorial within Locoscript) (State 8596 or 8512 when ordering) LAUNCH OFFER Christmas special begins here: order TypeFile 2 or 9 + TempDisc before December 1st and claim a FREE Page Boy word processing ruler

Telephone (0395) 277496

These pages provide a comprehensive guide to the Amstrad PCW software. Published in three monthly parts, this time it's the turn of Databases, Education, Communications and Programming packages to face the ultimate test. We've set out to cover every important piece of software we could lay our hands on, and to give you enough information to decide whether they are suitable for you.

The software listed here represents what we consider to be the best of the many programs available. As well as a brief summary of what they do, the main Plus and Minus points for each program are listed – Pluses have a ▲ by them, and Minuses a ▼. Those we think are particularly noteworthy have a flash on them.

To the best of our knowledge, all the programs here should run on both 8000 series machines and the 9512.

• DATABASES •

There are broadly two different types of database, and which suits you best depends, of course, on what you want it for.

Firstly there's the simple card index substitute. For many home users, this will be the kind of thing you want – all it does is store your address book or stock items so that you can easily look them up.

A more sophisticated option is the programmable database. With these, in addition to allowing simple card index retrieval there is a command language which allows you to analyse the data on the cards. For example, you could automatically add up the money owed to you by all your customers from Yorkshire. To make best use of this kind of facility, you will need to be able to understand a little programming, although it's not too hard really.

A bit of jargon now. A database is said to consist of records – this is just like a card in a conventional card file, with all someone's details on it. Each record is composed of fields – a field is a single entry on a card, like someone's name, or age, or postcode.

The thing that makes a database special is an index. You might be able to hold your address book as a simple list in a word processor document, but if it gets large then this becomes unwieldy. An index means that the database has worked out which order records should be in, so it can go straight to the one you want without looking at lots of others first.

The field that you use as your index (e.g. someone's surname) is said to be a key field, and can be looked up very fast compared to "non-key" fields. A good database will allow

multiple keys, meaning that it can look up data just as fast for a variety of types of information.

MASTERFILE 8000 £49.95 • Campbell Systems • 0378 777623

A specially written PCW version of the successful database sold on other Amstrad computers. It is fully menu controlled, and makes good use of the PCW's special screen and keys. It can deal with up to 8 separate data files at once, so can cope with relational databases. Screen (but not printed output) can be elaborately laid out with boxes, lines etc.

PLUSES • MINUSES

- ▲ Works fast
- ▲ Wide range of Layout options
- ▲ Handles "relational" files
- ▲ Plenty of good example files
- ▲ Can do arithmetic calculations within its records
- ▼ Capacity limited by size of M drive – best on an 8512
- ▼ Takes a while to learn all the features

ATLAST

£39.95 • Rational Solutions • 0566 81511

Recently released revised version with new manual and a new price, Atlast Plus is a full featured database that is excellent value for money. It does what Cardbox did, with much better reporting facilities, and can sort too. You can do simple totalling of columns, but not general arithmetic on fields in a record. Its claims to be a true "relational" database like dBase II are a little grandiose, but a good general purpose database – recommended.

PLUSES • MINUSES

- ▲ Good screen editing facilities
- ▲ Constants enable insertion of repetitive data.
- ▲ Good on storage space – ideal for 8256 owners
- ▲ Handles names and addresses well.
- ▼ Still no arithmetic calculation in field
- ▼ Setting up the database is at first confusing – function of "SYS" file unclear
- ▼ Good but not that good

CAMBASE II

£49.95 • Cambrian Software • 0766 831878

New version of the old favourite PCW database. Most important change is the Copy Filespec facility. You can set up a new database with potentially more entries than you've made provision for using the information from the original database. You can also change the fields to suit another set-up.

PLUSES • MINUSES

- ▲ You can set up a database blueprint (Filespec) which you can test thoroughly before entering data
- ▲ Includes powerful features like conditions, loops, field validation, and spooled layouts
- ▲ Simple parts of the program are well-covered in the manual
- ▼ Can't use the memory – bad news for 8256 users
- ▼ You have to guess how to use the advanced features
- ▼ Not much room for prompts
- ▼ Tendency to crash occasionally in Filespec

MINI OFFICE PROFESSIONAL

£29.95 • Database Software • 0625 878888

Mini Office is a suite of five integrated programs – database, word processor, spreadsheet, graphics module and communications package. The database is a pretty standard card index type, similar to First Base. Good range of selection operations and arithmetic on fields. Can sort over a combination of fields and print out a variety of smart layouts, and you can have up to 255 fields! Of course you're getting four other very good programs as well. The big problem is that you can't import data, so any data you already have must all be re-entered. No export either.

PLUSES • MINUSES

- ▲ Easy to use and intuitive
- ▲ Can use the data in the word processor
- ▲ Powerful selection and sort facilities
- ▲ Arithmetic on fields
- ▲ "Test print" facility lets you check your labels will print OK
- ▲ One command makes global changes, e.g. all "£3.50 to £5"
- ▼ Can't import or export data
- ▼ Manual is of very little use

CHIBASE

£49.95 • Chiasma • 06333 60996

A "true format" database, which means you don't have to go

through the usual nomenclature of defining your record format before you can enter your data. Instead, you just type text into Chibase, mark the words to be indexed, and it can then treat that file as a database.

PLUS • MINUSES

- ▲ Doesn't require you to set up a preset 'record' card
- ▲ Searches through your data very quickly
- ▲ Allows you to select up to 50 keys for each page of text
- ▲ Allows editing of text without a word processor
- ▼ No sample file for you to learn on

DELTA

£99.99 • Composit • 04868 25925

Delta is another one of the heavyweights, like Dbase II and Concord, but unlike them is fully menu driven. Although the screen layouts are fully flexible, there is a default 'quick' layout so you don't have to sweat at defining your own. It could use better record indexing facilities. Particularly good for writing applications, once you have ploughed through the large manual.

PLUS • MINUSES

- ▲ Records can contain up to 90 fields, plus groups of fields that may be repeated
- ▲ Screen layout can be user defined, or 'quick' mode used
- ▲ Single-page letter writer provides detailed mail merge
- ▲ Processes can be defined, and run from user defined menus, for ease of use by others
- ▲ Very full, and quite readable, manual
- ▼ Only one field may be used for indexing
- ▼ Very big program - a PCW8256 would be hard pushed
- ▼ Some of the menu operations are unforgiving to errors

POCKET INFOSTAR

£69.50 • MicroPro/DRA • 0386 841181

Consists of two large programs, DataStar and ReportStar (both available independently). DataStar is a conventional database, with screen card layout and indexing. ReportStar then generates the printed output, either from DataStar or CalcStar files. Powerful if you can use them, but the suite is horribly unorganised, and the documentation just incomprehensible.

PLUS • MINUSES

- ▲ DataStar is a quite good database with indexing and calculated fields
- ▲ 'Transaction processing' feature allows cross-referencing of data files
- ▲ Can be integrated with other Pocket products, eg WordStar
- ▲ Can take up to 255 fields per record
- ▼ Two-volume manual set is very badly organised
- ▼ There are separate programs to run for form design, data entry and reporting
- ▼ Operation is all by obscure command keys, à la WordStar

CARDBOX-PLUS

£99.95 • Business Simulations • 0892 863105

Business Simulations are the company who actually wrote the successful Cardbox database, and they are the sole distributors of their enhanced version Cardbox-Plus. Disappointingly, still no hidden facilities, but it does boast sorting, index, listing, disc management and an ad hoc feature as extras to Cardbox. The ultimate straight card index, if you have the money.

PLUS • MINUSES

- ▲ All the facilities of the very successful Cardbox
- ▲ Cards can be sorted into order for browsing and printing
- ▲ 'Autosave' regularly stores the data to disc in case of mishap
- ▲ Files created by Cardbox can be read
- ▲ Full and good manual, although the tutorial is at the end
- ▼ Still no way of performing numeric calculations
- ▲ A lot to pay for a few files to the basic Cardbox

DBASE II

£99.00 • Ashton Tate/First Software • 0628 3312

The WordStar of database packages. Recently licensed 'business' for Amstrad machines, Dbase II is a market leader in business computing. As you would expect, this means it is very powerful but very complex. It has a procedure language to allow you to write programs to manipulate the data, and you can construct index files for really fast access to large databases. If you can make the effort to learn it, it'll serve you well.

PLUS • MINUSES

- ▲ Powerful command language for customised programs
- ▲ Indexing facility makes large databases fast to handle
- ▲ Can handle very big databases
- ▼ The data can be fairly easily altered after its entry
- ▼ Manual is daunting (but there are plenty of dependent books on the market)
- ▼ Can't easily alter the screen record layout
- ▼ An expensive package, you still only get 32 fields per record
- ▼ Generally unforgiving unless you have some programming skills

FT = DB

£29.95 • Encyclosoft • 0270 811688

A free form database like Chibase, but instead of typing your text into the database itself, you create it on a wordprocessor first of all. Once done and edited to your liking, you mark all the words you want to be used as keywords (still in your word processor) and then read it into FT-DB. Now you can treat it as a database, compile indexes, search for phrases and so on, all quite efficiently.

PLUS • MINUSES

- ▲ Easy to use
- ▲ Versatile retrieval system over several text files
- ▲ Inexpensive
- ▲ Can move between index and text at will
- ▼ No editing facilities within FT-DB

FIRST BASE

£29.95 • Minerva • 0392 37756

Billied as a simple database for the first time user, First Base is quite a competent cheap card index. The manual is computer printed, and weak on diagrams which doesn't help things. One weakness is getting printed results out of First Base - either you settle for crude lists, or you have to create a template in LotusScript which is awkward to do. But overall, for simple applications and beginners, it's pretty good value for money.

PLUS • MINUSES

- ▲ Can alter the index field at any time
- ▲ Simple to use screen editing makes data entry easy
- ▲ Good value as a simple card index lookup system
- ▲ Easy to browse through picking out a set by hand
- ▲ Manual is badly laid out and generally difficult
- ▼ Producing printed output is awkward

SMARTCARD

£59.95 • Focus Computers • 0272 420109

A conventional card index database which is now the nearest thing available to Cardbox. Small and fast, you can sort the records index up to three fields and do simple arithmetic in fields. Can't put background text (eg. titles) on records or printouts.

PLUS • MINUSES

- ▲ Good screen screens
- ▲ Plenty of onscreen help
- ▲ Fast and high capacity
- ▲ Easy to use
- ▲ Can't put background text on printed reports
- ▼ No way of exporting data for mailmerge

DATSTORE II

£39.95 • Digita • 0395 45059

Another standard database, written in BASIC and using Mailard's famous JETSAAM commands. Is therefore slow in some parts though version 2 is considerably faster than 1. Simple to use, has calculation facilities and a good control over the printed output - your printouts can be made to look very impressive. You have to set the maximum number of records you want before you start, it takes time, and browsing is slow.

PLUS • MINUSES

- ▲ Good range of print format commands
- ▲ Simple to use
- ▲ Calculation facilities - OK for accounts use

• EDUCATIONAL •

- ▲ Nice touches eg. text automatically adjusts size to fit printout
- ▼ Must set max. no of records on setting up database
- ▼ Only two printouts per user database
- ▼ Slow at browsing through

SAGESOFT RETRIEVE

£70.00 • Sagesoft • 091-284 7077

A high-power package that is relatively easy to use with password security if desired, calculations, automatic counting or deletion of sets of records satisfying given conditions. It also has sophisticated sort and select commands, and change the structure of an existing database. All this is done by a set of commands rather like a programming language. Printed formats are rather limited though and the program insists on using both drives, making use on a 8256 impractical.

PLUS • MINUSES

- ▲ Easy to use for a powerful package
- ▲ Advanced sorting and selection commands
- ▲ Subsets can be written to files
- ▲ Can count or delete subsets with one command
- ▲ Labelling/mailing routines included
- ▲ Can change structure of existing database
- ▼ Possibly big program for 8256
- ▼ Printed output limited - must use mailmerge

PROTEXT FILER

£24.95 • Arnor (0733 68909) • All PCWs

This is a program which adds database features to Protect so that you can use a database system from within the wordprocessor. It's very convenient for maintaining records without having to keep switching to a database package. Except for the sort program, you can work within Protect all the time.

PLUS • MINUSES

- ▲ Very easy to use once you learn it
- ▲ Small, simple Protect environment
- ▲ Good sorting facilities and name handling
- ▲ Can use Protect/database in parallel
- ▲ Import/export/print formats no problem
- ▼ No calculation facilities
- ▼ Selection facilities are a bit crude
- ▼ If you're familiar with Protect you can probably mimic a database yourself

MICROFILE

**(Sold in The Micro Collection)
£49.95 • Saxon Computing • 0401 50697**

Microfile is a well implemented simple database, driven by plenty of menus and on-screen prompts. It's fast and has good screen control, although it has some size restrictions. Microfile comes as part of a software suite, 'The Micro Collection', which is good value (Microfile, Microwrite, Microspread, Flexilabel and Look-It).

PLUS • MINUSES

- ▲ The package includes competent word processing, spreadsheet, labelling and encryption programs
- ▲ Plenty of menus and on-screen prompting
- ▲ Very flexible formatting for screen layout and printing
- ▲ Numeric fields can be expressions to be calculated
- ▲ Indexing is fast and can be on several fields
- ▼ Maximum number of fields per record is only 20
- ▼ Limited facilities for totalling up fields in a database

- ▼ to get going
- ▼ Documentation has hardly been altered from cassette-based versions
- ▼ Since it is for young children, more imaginative use of the screen would be nice

WRITE RIGHT

£9.99 • Wadd Soft • 0253 721303

Program consists of 24 sets of multiple choice questions designed to test and improve the student's knowledge of the English language: sentence construction, spelling, punctuation, vocabulary, for example.

PLUS • MINUSES

- ▲ Covers all the most important aspects of language learning
- ▲ Very addictive
- ▲ Good fun and easy to use

Laser Printing

from 25p per sheet

Top quality laser printing in a wide choice of typescripts and sizes from your word processor. Just mail us your text files on floppy discs and we will send you laser printed masters by return.

TELEPHONE: 01-902 5218

DEPT 4, UNIT 6
STANLEY HOUSE
STANLEY AVENUE
WEMBLEY, MIDDXX HA0 4JB

The 6000 Plus review said:
"...good, consistent, easy to read fonts with 'flair'. This is because of the original produced by Dragonfly. Design has been worked and re-worked until it cannot be improved upon given the limitations of the medium. It is not to give away that it is both professional in standard and fair in price, and where possible, imaginative in artwork."

Independent Aids to Desktop Publishing Disc prices are £1250 (VAT inc)

Two new discs: 1 for STOP PRESS and HORIZON INTERNATIONAL only at present.
COMPLEMENT 2 • A further disc of Fonts and Borders, including six body text fonts for Newsletter editors, a true Celtic Face and American Uncial (often used as Celtic).
ILLUMINATION • A disc of Decorative Fonts and Large Typefaces for tidy headlines. It also includes 'Illuminated' lettering for the start of paragraphs. Including a screen of examples.

There are also some special offers for Christmas. For details send SAE to:

2 FINGERS TOUCH TYPING

£24.95 • lansyst • 01-607 0187

Despite its provocative name, a useful typing tutor in that it specifically caters for people who can already get by on subscripts with two fingers. You are gradually introduced to touch typing, so your speed doesn't drop while you learn. Fills a necessary slot in the Typing Tutor market.

PLUSES • MINUSES

- ▲ Suitable for improving two-finger typists without much drop in speed
- ▲ Full on-screen instructions
- ▲ Exercise material is interesting text, not letter drills
- ▼ Explanation text is annoyingly verbose in some lessons
- ▼ It doesn't always ensure that the cursor is properly aligned with the exercise text

GIANTKILLER

£14.95 • Topologika • 0733 244682

A mathematics adventure game loosely based on Jack and the Beanstalk. Lots of interesting puzzles which should stimulate any student up to GCSE standard. The best adventure game ever written but great for making mathematics fun!

PLUSES • MINUSES

- ▲ Puzzles pleasantly integrated into scenario
- ▲ Progression of game is simple and well defined
- ▲ Puzzles introduce a lot of valid mathematics
- ▼ Program understands only very simple commands
- ▼ Saving a position takes a move – can be fatal
- ▼ Won't be of particular help in exams

BETTER SPELLING

£12.95 • School Software Ltd • 010 353 61 27994

This is a spelling course aimed at the 8 to adult age group. It consists of a series of well organised, short lessons each dealing with one topic, like plurals or which version of three there they're to use in a sentence. The use of the PCW screen is rather unimpressive, and doesn't hold your attention.

PLUSES • MINUSES

- ▲ Well thought out lessons to emphasise particular points
- ▲ Teaches words in a sentence context as well as in isolation
- ▲ Lessons can be picked in any order from a menu
- ▲ Seems to be proof against mischievous key pressing
- ▼ Boring use of the screen doesn't grab interest
- ▼ No instructions come as to how to use the program.

CHEMISTRY • BIOLOGY

£12.95 • School Software • 010 353 61 27994

These two are fairly traditional question-and-answer tests. You are faced with a choice of 10 topics, and then asked 10 or so questions each, where you have to fill in the blank in a statement. There are preamble notes beforehand, and if you get it wrong you are given a clue. Aimed at 12-16 year olds.

PLUSES • MINUSES

- ▲ Questions would challenge a GCSE pupil well
- ▲ Preamble notes introduce topics
- ▼ The fill-in-the-blank questioning style has little flexibility for different answers
- ▼ No option to add questions for a specialised syllabus
- ▼ Some careless errors, like incorrect facts and hard to decipher chemical formulae

MICRO MATHS

£24.95 • LCL • 0491 579345

Supposedly covering 8 to adult ages, this seems an O-level type program, covering topics from calculus to tables. A good implementation on the PCW with proper use of the screen. Questions are picked at random from a pool, so may repeat but never run out. Replies to questions are typed in mathematical notation, like X²-3.

PLUSES • MINUSES

- ▲ You can pause to use BASIC as a calculator while you think
- ▲ Unlimited question set
- ▲ Comes with a 'free' book of AEB O-level questions
- ▲ Good hints and explanations when you get an answer wrong
- ▲ Questions in a topic repeat occasionally
- ▼ Some hints, like the clock and beeper, are annoying
- ▼ No flexibility to add questions for a particular syllabus

AMSTAT 1,2,3 AND 4

£30-ish • Coleman • Ashby-de-la-Zouch LE6 5DA

A suite of four statistical routines including a business analysis program, forecasting and resource management. Individual prices range from £27.95 to £39.95, all four cost £99.95. Sophisticated but perhaps awkward for beginners.

PLUSES • MINUSES

- ▲ Good range of statistical functions
- ▲ Good manual
- ▲ Can produce fair quality graphical results
- ▼ Some editing procedures very long-winded
- ▼ Needs some expertise to use properly
- ▼ Weak on checking that input data is reasonable.

YES CHANCELLOR!

£14.95 • Topologika • 0733 244682

Well! Don't skip over Yes Chancellor! because it calls itself an 'economic simulation' program. Instructive and fun to use. You type in your annual budgets (tax rates, public spending etc.) and see your popularity, plus the economy crash. Great for economics classes, also an amusing game in itself.

PLUSES • MINUSES

- ▲ Simple but effective model of the economy
- ▲ Comes with booklet explaining economic principles
- ▲ Great for teaching economic and political pragmatism
- ▲ Can get boring as a game
- ▼ You can't adjust the model of the economy, so it can be too simple

IANKEY CRASH COURSE

£24.95 • lansyst • 01-607 0187

A fairly traditional typing tutor, taking you through basic keyboard exercises. There's a lot of explanatory text, which gets in the way second time around. Definitely competent, but a bit boring.

PLUSES • MINUSES

- ▲ Mostly avoids boring letter drills
- ▲ Very full on-screen information guides you along
- ▼ "Fast" option cuts out some text if it gets repetitive
- ▼ Not particularly imaginative use of graphics
- ▼ It doesn't always ensure that the cursor is properly aligned with the exercise text

To use any service, you will need to buy a modem and an interface. A modem allows you to send computer signals down a phone line, and the interface gets the signals from your PCW to your modem. The pair will set you back £200 or more. Once done, you need some software to allow you to send and receive data, and it is this software reviewed below.

Electronic mail services just send strings of characters to and fro, whereas Prestel is a 'Viewdata' system, meaning it sends pictures and graphics too. Software needs to do more to receive Viewdata graphics, so if you want to use Prestel make sure your software is up to it.

8256UKM7.COM

Public domain (i.e. free!)

P.D. software documentation is often poor but this program has an above average document file. UKM7 was written to support ASCII file transfers in the context of a computer-to-computer terminal either for use over the phone or between two Amstrads. Between two PCWs file transfer is possible at a staggering 31,250 baud which is even faster than PPI Easy to use for beginners and better than KERMIT. UKM7 provides a cheap and excellent way to communications after you've got tied up with the PCW's MAIL232. 8256UKM7 is available from the Public Domain Special Interest Group, or most bulletin boards supporting the PCW machines.

PLUSES • MINUSES

- ▲ Cheap! (the price of a phone call)
- ▲ Easy to use, and helpful menus
- ▲ Both CRC and Xmodem protocols supported
- ▲ Single file and Batch Mode transfers
- ▲ "Quiet" mode for slightly faster transfers (on-line transfer progress report disabled)
- ▼ Only ASCII, no Viewdata
- ▼ You need to find a PD software source (eg. use a modem and MAIL232 software)

DIALUP

£89.99 • PMS Communications • 021-643 7688

Offers both E-mail and Viewdata operations. Very easy to use, and offers an XMODEM transfer protocol unlike a Sage CHITCHAT. If you are buying a modem too there are some cut-price bundled deals to be had, eg. the Miracle Technology WS4000 modem.

PLUSES • MINUSES

- ▲ Easy to use
- ▲ Comprehensive file transfer commands, including XMODEM and the increasingly popular KERMIT
- ▲ Runs from the M drive
- ▼ Manual is not PCW specific, and the references to 5.25" discs are tedious

CHITCHAT

E-MAIL/VIEWDATA/COMBO
SageSoft • £69.99/£69.99/£99.99 • 091 284 7077

Two communications programs for the 8000 series machines that have been around for a good time now. Most of the features you will need are here: message text editor, preprogramming unattended tasks (if you use a suitable "intelligent" modem), directory of stored numbers, copy to printer, and a very useful connect time clock so you can watch your phone bill climb! E-mail is used for simple text phone links like Telecom Gold, whereas you will need Viewdata if you want to use Prestel. The Combo pack contains both E-mail and Viewdata.

PLUSES • MINUSES

- ▲ Good, clear documentation
- ▲ Easy for first time users to use
- ▲ Built in text editor for pre-sending message preparation
- ▲ Pre-defined tasks executable at any preset time if unattended.
- ▼ No error corrected file transfer (i.e. Xmodem or CRC)

• COMMUNICATIONS •

Communications is one of the glittering areas of computing, gurus would have you believe. It can provide a fascinating hobby for 'hackers', but more importantly it is a valuable business tool.

'Electronic mail' is just what it says: you use your PCW to send messages, which can be documents thousands of words long, to others on the electronic mail system. The best known system of this kind is Telecom Gold, which also allows you to send telexes. Another major system is Prestel, which is more of an

information provider – you can read share prices, weather information and other news direct from your phone line.

For any professional service, you pay a registration fee, plus a connection charge – typically around 10p per minute you use the system. Of course, your phone bills are extra. For hobbyists there are also 'Bulletin boards', which are effectively a kind of private electronic mail system run by a system operator (a 'sysop' to those in the know).

MINI OFFICE PROFESSIONAL

£29.95 • Database Software • 0625 878888

Mini Office is a suite of five integrated programs: database, word processor, spreadsheet, graphics module – and a communications package which is as comprehensive as anything else on the market. It can display both ordinary text screens and the 'Viewdata' block graphics used by Prestel. You are offered baud rates from 75 to 9600, separately set for transmit and receive, straight terminal emulation for use with Telecom Gold, and XMODEM and KERMIT file transfer protocols for error-proof transfer of long files. Would be worth the money just by itself – and of course you're getting four other very good programs as well.

PLUS • MINUSES

- ▲ Very comprehensive – a genuinely useful communications package
- ▲ Ordinary text and 'Viewdata' block graphics
- ▲ Can save setups under names and recall them, so you only need work out your baud rates/parties once
- ▲ You can set keys to return strings, such as Telecom Gold passwords

- ▲ Comes preconfigured to use Prestel and Telecom Gold
- ▼ Manual is of very little use
- ▼ Still some bugs

COMM+

£86.25 • NewStar • 0277 220573

This single package combines both ASCII and Viewdata block graphics and Telesoftware downloading. A very powerful command language allows you to look for particular messages coming in and take actions, even while doing other things. Its use is only limited by your programming ability.

PLUS • MINUSES

- ▲ Very comprehensive and well indexed ringbound manual
- ▲ High quality Viewdata graphics
- ▲ Well presented on-line help menus for use by beginners
- ▲ Autodownload program works with most manual modems
- ▲ Telesoftware downloading facility, with CHC/Xmodem checking
- ▲ Very powerful command language, doesn't need much programming skill to learn
- ▼ Not recommended for absolute beginners to communications

can lose track of which variables are used where. The VICAR produces a concordance listing and other diagnostics, to help you find bugs and maintain the program.

PLUS • MINUSES

- ▲ Easy to use but still flexible through use of options
- ▲ Amstrad versions all at a special low price
- ▲ Good manual
- ▼ Only of value on large programs
- ▼ Limited value to most PCW users (except BASIC buffs)

MODULA 2

£45.00 • FTL/Grey Matter • 0364 53499

A compiler. Modula-2 is the successor to Pascal, good for large programs requiring separate compilation.

PLUS • MINUSES

- ▲ Full implementation with extensions
- ▲ Includes libraries of predefined modules
- ▲ WordStar-type screen editor included
- ▼ Compilation process is longwinded and not for beginners

• PROGRAMMING •

Programming languages come as either 'compilers' or 'interpreters' – compilers preprocess the program into machine code, so are much faster. The PCW's standard Mallard BASIC and LOGO are both interpreters. Compilers are generally more cumbersome to use than interpreters, but have obvious benefits.

With language compilers in particular it is difficult when they are reliable and efficient without spending many weeks working with them, impossible for a brief review. If you use a specialised programming language and have any comments that would help us compile a good software file entry for it, we would be pleased to hear from you.

PASCAL / MT+

£45.00 • Digital Research • 0635 53499

A full implementation of ISO standard DP5/7185 Pascal with a number of extremely powerful additions. Is very good for large complex applications – both data-processing and system control.

PLUS • MINUSES

- ▲ A very powerful tool for the serious software writer
- ▲ Unlimited program size with modular development and use of overlays
- ▲ Built-in assembler
- ▲ Improved string handling (over standard Pascal)
- ▲ Choice of 800 real numbers for commercial/financial use
- ▲ No lock in text editor – will need to operate separately
- ▼ Compiler in general and the manual in particular are not for beginners.
- ▼ No graphics

MIX C

£29.95 • Advantage • 0844 52075

American C compiler. You can buy a full screen editor with it for £19.95 extra. Also machine code assembler & examples for £8.95 each.

PLUS • MINUSES

- ▲ Features a C tutorial
- ▲ Comprehensive implementation and massive manual
- ▼ Not for the newcomer to programming

DEVPAK 80 MKII

£49.95 • HiSoft • 0525 718181

Version 2 of the PCW hacker's first choice of development system. Substantially upgraded from the original with a new quite powerful debugger, and a Mini Office-style main menu

from which to run the individual utilities or your own finished programs.

PLUS • MINUSES

- ▲ Powerful assembly producing .REL files
- ▲ Good hex facility for BASIC programmers
- ▼ Text editor antiquated and clumsy
- ▼ Weak monitor

HISoft C

£29.95 • HiSoft • 0525 718181

A very good C compiler, fast, produces good compact code.

PLUS • MINUSES

- ▲ Compiles program into ordinary CPM .COM file
- ▲ Produces compact code
- ▲ Fast and inexpensive
- ▼ No floating point arithmetic

ARNOR C

£49.95 • Arnor • 0733 68909

Good compiler with floating point arithmetic, but not as fast or as cheap as HiSoft C.

PLUS • MINUSES

- ▲ Excellent integrated text editor
- ▲ Floating point arithmetic
- ▼ Cumbersome to produce .COM files, needs special run time support program
- ▼ HiSoft C is faster and cheaper

LForth

£19.95 • HiSoft • 0525 718181

Forth is an unusual language, somewhere between assembler and C. This is one of the few compilers available for the PCW.

PLUS • MINUSES

- ▲ Comes with a Forth editor
- ▲ Quick and efficient implementation
- ▼ Manual doesn't teach you Forth

PASCAL

£39.95 • HiSoft • 0525 718181

A standard full Pascal compiler

PLUS • MINUSES

- ▲ Well integrated text editor – when you hit a compilation error you are returned to the correct point in the code
- ▲ Short compilation time, economical on memory
- ▼ Manual makes no attempt to teach you Pascal

THE VICAR

£29.95 • Iansyst • 01-607 5844

A programming tool for serious programmers. If you have a several-hundred line program held in several files on a disc, you

CBASIC

£45.00 • Digital Research • 0635 35304

Compiler

PLUS • MINUSES

- ▲ Easier programming tool than conventional BASIC interpreter
- ▲ Very similar to BASIC, so easy to learn
- ▼ No text editor – must split your programs into 200 line chunks to work on
- ▼ Programs work no faster than they would in conventional BASIC, sometimes slower
- ▼ Non-programmers may get bored.

MAXAM II

£49.95 (£69.95 inc. C) • Arnor Ltd (0733 239011) • All PCWs.

CP/M machine code development system incorporating an editor, assembler and monitor. It will allow you to disassemble extra memory on m-drive.

PLUS • MINUSES

- ▲ Very versatile assembly language programming environment.
- ▲ Flexible monitor capable of bank switching, conditional breakpoints and symbolic debugging
- ▲ Tailored to meet all CP/M Plus programming requirements
- ▼ Program can't cope with some undocumented Z80 instructions.
- ▼ Program assumes basic familiarity with the Z80 assembly language.

NEXT MONTH

The guide continues with the categories of SPREADSHEETS, GRAPHICS and GAMES. The month after that will cover WORD PROCESSORS, ACCOUNTS/PAYROLL, UTILITY and DTP software, and the month after that it's back to this month's topics.

Our intention is to keep publishing the three parts of the guide in rotation, updating it each month to include all new products. If you would like to see other sections of the guide, back issues of 8000 Plus are available at £1.75 each.

Meanwhile, if you are aware of any significant omissions or errors in the File as published, please let us know. We intend to maintain it as THE authoritative guide to PCW software.

ORDER FORM No. 27

HOW TO ORDER

Just list the items you require in the Order Form below or ring our 24 - hour hotline on (0458) 74011 and ask for Credit Card Orders. All goods are sent by first class post, normally within five days of order. But please allow 28 days in case of temporary shortage.

New Subscribers please note:

The first issue of a new subscription will be one or two issues away from the one current when you place your Subscription Order.

IAL OFFERS

THE 8000 PLUS SPECIAL OFFERS SECTION

Welcome to the new-style 8000 Plus Special Offers section. As ever, our intention is to bring you the best selected products in the marketplace - products which for various reasons are often hard to obtain in the shops. Rest assured, however, that to qualify for the Special Offers section the product has to have been successfully reviewed in the magazine. In some cases, such as DTP and LocoScript books, we have chosen from a plethora of titles the one which we believe offers the best features and represents the best value for money.

Scan these pages at your leisure. Not only are many of the items hard to obtain, but we usually manage to offer you them at less than the full recommended retail price and we carry stocks. If you call (0458) 74011 or fill in the Order Form on the left hand page, you'll usually get your goods within three working days of ordering (although some items - highlighter pens! - do run out of stock and can be hard to obtain so please allow 28 days for delivery in such cases).

If you have any queries contact Christine Stacey or Sarah Richards on (0458) 74011.

9512 software:
The following titles do not run on the 9512:
Tetris
Distractions

DISTRACTIONS

Just £9.95 (RRP £19.95)

Wow! Three games on this compilation disk, which makes each one cost £3.30 each. It's not just value for money though, because the games themselves were written by Design Design and feature three great program ideas. NEXOR is a superior 3D isometric graphics strategy game, 2112 AD an icon-driven arcade adventure and On The Run is a super-fast all-action maze game.

Altogether you're getting three intelligently-written graphic arcade games with a strong strategy element ensuring that they remain playable and interesting for more than the time it takes to master the initial 'shoot to kill' element. Which is why it's called Distractions!

Order Code 8047

TETRIS

Only £14.99 (RRP £19.99)

The first Russian game to reach the West has won rave reviews everywhere. All you have to do is guide blocks down the screen into complete rows on the bottom - but be warned it has a 'Just one more go' rating of 100 per cent!

Order Code 8027

CATCH 23

Just £14.95 (RRP £19.95)

'A good deal of thought and planning has gone into this game and it shows', was what our reviewer said of this 3D wire graphic arcade strategy game in issue 25 of 8000 Plus. Martech's first PCW game is something of a quiet

PICK OF THE MONTH!

triumph for intelligent gameplay interspersed with furious action requiring lightning-fast reactions at key points.

The basic aim is to enter a military complex and get out with a laser system blueprint. You have 14 sectors to explore, and weapons include detonators, bombs and timers. The vector graphics - a la Starglider - involve you in a thoughtful game which offers the best new PCW entertainment for many a long winters night.

Order Code 8043

ACADEMY

£12.95 (RRP £19.95)

A brilliant sequel to the ground-breaking space exploration game Tau Ceti. In Academy you must complete 20 missions, grouped in five levels of four; combat skills and environmental understanding mean must both be completed to succeed. Graphics and control factors have been heightened to push computer gaming to a completely fresh level. You won't be disappointed!

Order Code 8035

LIVING DAYLIGHTS

Just £9.95 (RRP £14.95)

'A demanding game with plenty of action' was the verdict on the officially licensed computer game of the James Bond film starring Timothy Dalton.

The game, based on the film and the coin-op arcade game by Arcadia, features eight levels, each in a different location, in which your responses must be lightning-quick in order to survive. Gameplay involves standard shoot-'em-up left/right/up/down/fire, with weapons including bazookas, grenades, missile-firing pens, crossbows and a ghetto blaster!

A game for those that like their games in the 'just one more go' adrenalin rush category!

Order Code 8046

SPECIAL OFFER

LOCOFILE

£29.95 plus Locoscript II wall chart and free disk

'It's difficult to think of any LocoScripters who wouldn't find LocoFile useful', was Rob Ainsley's conclusion when he previewed Locomotive's new database in issue 26 of 8000 Plus.

The fact is, a database which can be accessed from inside LocoScript II and is fully compatible with DataMail is a brilliantly logical idea. Locomotives usual panache comes to the fore in the feel of the program too. Essentially an easy to use card index, LocoFile features flexible indexing, fast lookup, efficient use of disk space and is suitable for any PCW (plus three hard disk drives).

Features include:

- Look up or change card details from within LocoScript
- CUT and PASTE to and from LocoScript
- Use up to eight indexes at once - alphabetic or numeric
- Cards up to 99 lines deep and 80 columns wide
- Up to 50 items per card
- Holds 1,000 names and addresses on a 706K disk
- No limit to number of entries on hard disk
- Add or delete fields, change card size at any stage
- Fully two-way compatible with Loco Mail

For all LocoScript 2 users who want an expandable suite of applications, Locomotive is providing the answer without ever having to boot up CP/M. LocoFile provides the classic easy-to-use environment familiar to LocoScript users and has all the hallmarks of a major software launch. Sighs of relief all round!

Order Code 8044

- ◆ Blank 3 inch CF2 disk

MINI OFFICE PROFESSIONAL

Only £23.95 (RRP £29.95)

An incredible value-for-money integrated package combining database, spreadsheet, word processor, comms and graphics function. Mini Office combines features often not included in

software three times the price: sideways spreadsheets, full database sorting, Prestel compatibility and extremely fast word-processing including a word counter.

In one package, this does just about everything it's possible to do on a PCW - if you want to break free of LocoScript, this amazing value program is for you.

TRIVIAL PURSUIT

Just £14.95 (RRP £19.95)

The world's most popular board game has been revamped for the PCW. This Domark version features tunes (played backwards!) and graphics-based questions, as well as a new cartoon character in the form of TP who introduces the questions.

Over 3,000 questions are included. Many are new and ensure that this version contains an entirely novel flavour whilst maintaining the essential fun of the original. So now's your opportunity to try and answer the world's most intriguing questions! These include: Which members of the Royal Family can vote? Do frozen peas float? What is Desperate Dan's favourite food?

Here's your chance to have fun and learn something at the same time!

ALL IN ONE BUSINESS COMPUTING:

AMSTRAD PCW AND MINI OFFICE PROFESSIONAL
£11.95 - Sigma Press

Mini Office is an integrated package, and Hughes shows more clearly than the manual how each module works together. Detailed explanations abound, with four chapters on word processing, three on comms, two on the database and spreadsheet and one on the graphics module.

With this book you may never need any other software for your PCW!
Order Code 8042

FREE!

20 3 inch disk labels in four colours are included free when you order the Mini Office book through these pages

LOCOSCRIPT 2 & AMSTRAD PCW'S

£11.95 - Locomotive Software

Whether you're an 8256 or 8512 user converting from LocoScript 1, or a brand new 9512 owner, this will tell you all you need to know. It covers the basics of layouts and tabs, LocoMail and LocoSpell, alternative printers and even gives you an introduction to the world of CP/M. If you find the Amstrad manual a bit daunting, then this is for you!

Question: How do you add an extra thousand bits to your 8-bit PCW?

Answer: Subscribe to 8000 Plus and you're nearly there!

There's no doubt about it. A full 12 issues of 8000 Plus AND a gift pack consisting of *The 8000 Plus Software Collection*, blank 3 inch disk and pack of disk labels - all for £17.95 - is incredible value for money. Take out an annual subscription and you are assured of the latest information about what's happening in the PCW market, written in the clearest possible prose by a team with more nous than a hundred networked Cray supercomputers. That's because 8000 Plus has got a sense of humour! Plus it has empathy for what readers want because the writers use the million-selling PCW all the time, so the editorial covers the whole market from typewriters to programming. No wonder the magazine has one of the highest percentages of postal subscribers of any magazine in the UK.

THE 8000 PLUS GIFT PACK

- 1 The 8000 Plus Software Collection (RRP £7.95)
More than 30 crucial files for your PCW
- 2 A blank 3 inch disk (RRP £2.50)
Micro Interface disk made in Japan with a hard plastic cover
- 3 Set of disk labels (RRP £1.00)
Colour-coded 8000 Plus 3 inch disk labels

But that's not all. As soon as you send in your completed Order Form we'll send you your free gift pack - a copy of the first-ever *8000 Plus Software Collection* (RRP £7.95) which includes more than 30 files of listings, public domain programs (including a full screen editor), Tip-Offs, examples for tutorials (eg Mini Office spreadsheets) and jokes! And a blank CF2 disk (in a proper plastic case!) worth £2.50 plus a packet of 8000 Plus disk labels. Which means a subscription where you get your magazine sent directly to your home address in advance of the street date, plus a gift pack worth over £11.

No other magazine would be so foolish! But at the end of the day, rest assured that you will be getting the best coverage of the PCW market you can find. No one does it better because no one cares as much!

SPECIAL OFFERS **8000 PLUS**

STOP PRESS

Only £74.99 (RRP £89.99)

There are sensible fonts
AND THERE ARE EXOTIC FONTS
And of course the *statutory* Old English font
So whatever you want you will find
One to Suit -
And it doesn't quite fit snugly up to it
Or else **Stretch it to fit**

▲ "Just some of the fonts available on AMS' Stop Press"

Desktop publishing - doing page makeup on your computer instead of the old cut-and-paste method - is the boom area of home computing. All the national dailies are switching over to DTP methods - and so are thousands of PCW owners, to produce newsletters and flyers.

Want to try your hand? The best developed DTP package for the Amstrag PCW range is now available from Future Publishing at an all-in price of £74.99. Stop Press's incredibly versatile and powerful software plus mouse will turn your PCW into a DTP machine.

The Swiss-made mouse is probably the best currently available and offers high resolution movement all over the screen. The software makes the best possible use of this sensitivity, featuring as it does a wide range of DTP facilities which would probably cost three times as much on higher-priced computers.

Just a few of the features are:

- 14 different fonts supplied
- Type sizes from 9 to 96 points
- Clip art ready made to insert into files
- Text entered directly or imported from word processor
- On-screen text formatting, including autoflow around a picture
- Draw, spray or paint - your own designs or those supplied
- Up to nine columns per page!
- Bold, italics, underline, reversed boxes
- Centering, ragged right and literal justification
- Prints up to 108 pages in one go
- Shape drawing includes triangles, squares, cubes, circles and ellipses
- Compatible with digitised pictures from MasterScan, Electric Studio and the Rombio digitiser
- 9512 compatible using an Epson compatible dot matrix printer

Altogether, this is a superb way of getting to grips with DTP. We don't expect to offer any other DTP package through these pages again, because we've held back until we were absolutely sure that this was the best deal. So here's your chance to get going.

Save £15 on the manufacturer's recommended retail price by placing an order with our mail order department (telephone 0458 740111)

Newsletters, fanzines, posters, letter heads, leaflets, charts, graphic business reports, flyers... all are now within reach, allowing your imagination as much freedom as possible. And with Stop Press there's no better way into the world of DTP.

POSTSCRIPT

A zeppelinful of Zeitgeist, zest and zeugma zeroed in on by a zealous Ed.

The last letter of the alphabet to introduce the last word in letters: PostScript. This is the place to exchange ideas on matters related and unrelated to the PCW - send your contributions to *PostScript*, 4 Queen St, Bath BA1 1EU. Discussed this time are our future, America, wobbly screens, PD, disappearing disc cases...all thought-provoking thoughts from you and your PCWs (there's your zeugma).

And the future?

I was not surprised to see the questionnaire in this (October) month's issue of 8000 Plus. I had been wondering for the last few months where you can go from here. Although new PCW users and (one hopes) subscribers to the magazine come along every month, they must inevitably form a smaller and smaller fraction of your total readership. Your tutorial function, which has served me, and probably other readers too, better than all the manuals and books put together, cannot therefore continue to be as dominant as it has been. Although new programs will appear from time to time, again they are bound to be of less and less significance compared with those already in existence and doing the basic jobs. What is to be your future role, the main substance of your features and articles next year and the year after that, is therefore a very real question.

Of course you are not alone in this. The software companies, PCs as well as PCWs, for games as well as "serious" programs, must be asking themselves with far more urgency than you need to do "What else can we offer? Isn't it all getting a bit repetitious?" Even the increased power of the new transputerised hardware currently being prepared for launching, with its opportunities for increased data

storage, greater processing speeds, multi-tasking facilities and greatly enhanced colour graphics power, does not promise to change the things that small businesses and keen individuals actually do with their computers. The fact that your writers and graphic designers and overall editorial grasp have been consistently superior to those of any other journal in the field makes the problem, ironically, more serious for 8000 Plus. You have recognised in good time that you are at a turning point. But - which way to turn?

I cannot claim to have the answer(s), but I can offer a few suggestions for you to consider. In my opinion you are in a much

better position than either the software houses or the games magazines to face the future because of the wide diversity of your readership. Not all of us have a sufficiently clear-cut and interesting use for our machines to warrant a Case In Point article. Many of us, however, would be prepared to echo the man I met in the shop as I was buying my PCW: "It will change your life", he said. As I was getting my 8512 as a sixtieth birthday present, I thought that a bit unlikely. Things tend to settle down a bit after the kids have left home and your job has come to an end. But now, after almost eighteen months, I know how right he was. This machine in front of

me now has taken a central place in my daily activities and thinking.

In understanding media back in 1964, Marshall McLuhan was referring to media of communication from the printed word to the televised image, but it applies with double force to PCWs. It is not so much what we write or design or organise with them that is of such great personal and social significance, but the very fact that we use them, that they give us so much more control, facility and accuracy in our handling of in our handling of information. And that there are so many of us. Unlike the printed book or the slick television programme, the PCW does not leave us the passive consumers of mass products, it puts the power in our hands. It is democratic, and one of the most encouraging facts to emerge from your recent editorials and letters columns is that, in the PCW world at least, women are truly equal to men.

My feeling is that 8000 Plus, while not forgetting its tutorial function, its obligations to its advertisers and their products, and the general fun business of being a personal computer user, could more overtly focus its attention upon the effects and the social implications of widespread PCW ownership. What does it do for small businesses, for the producers of club newsletters and parish magazines? How does it help writers - is it merely a question of degree compared with the typewriter, or does it add up to a difference in kind? If PCWs are, as I feel, a force for social change, is it worthwhile trying to see where that change is heading, and even trying to control it - all of us?

Ron Cook
West Bromwich

Costly mistakes

Oh dear! Perhaps Locomotive software shouldn't be producing

Pure new woollies

ELECTRICAL

new products – 8000 Plus having trouble matching our products to their prices recently.

In your review of LocoFont Set 2 (note not LocoFont 2 or LocoFont II) you quoted the price as £19.95 – £5 too much, and in your preview of LocoFile you gave the price as £24.95 – £5 too little. In the November issue you variously quoted the price of LocoScript 2 as £19.95 and £25.00 – it's actually £24.95.

Also in your good software guide you mention LocoFont set 2 but fail to mention LocoFont Set 1. You also give LocoMail and LocoSpell as joint Locomotive/Amsoft products – in fact at the prices you give these are only available from Locomotive or our dealers.

And finally, in the good software guide you state that LocoMail needs a separate program to sort and filter addresses. Only half right, I'm afraid! Yes, you need LocoFile to sort addresses, but LocoMail is perfectly able to filter them all on its own!

So to avoid further confusion, our LocoScript products are as follows:

LocoScript 2 (latest version incl 2 fonts)	£24.95
LocoSpell	£19.95
LocoScript 2 and LocoSpell	£34.90
LocoMail	£29.95
LocoFile	£29.95
LocoFont (set 1 – 10 fonts)	£19.95
LocoFont (set 2 – 6 fonts)	£14.95

We are developing new products all the time, of course, and this list may well be added to in the near future.

Howard Fisher
Locomotive Software, Dorking

8000 PLUS Sorry, we take every effort to insure against making mistakes but inevitably a few are bound to creep in.

Ageing like the clappers

Reading the article on using the PCW to help run a club in which the society of which I am membership secretary is mentioned I noticed I had aged by about 50 years in the photograph which accompanied the article – the photograph printed does not relate to the caption underneath it and for the record does not show me supervising massed ringing but instead shows a member of Buckfast Abbey being shown how to ring by a lady ring. At least I hope that's the case and not a phenomenon Andrew Bibby in his article on the health risks of using computers should have included – maybe I've been sitting at this

Stock answers

There were one or two errors in the presentation of my 'Stocks and Sheets' article (October, issue 25) and I thought I would bring these to your attention in case you received any queries from readers that you found puzzling.

First, in the reproduction of

A::	B::	C::	...	Q::	R::	S:
1:DATE	6/27	7/4		10/10	10/17	10/24
3:SHARE PR.	1.77	1.79		1.72	1.69	1.35
5: 16 wk MA				1.75	1.74	1.71
7: 4 wk MA				1.81	1.79	1.64

Here is the formula display, which was not shown:

:A::	B::	C::	...	Q::
1:DATE	DATE(6,27,87)	B1+7		P1+7
3:SHARE PR.	1.77	1.79		1.72
5: 16 wk MA				AVERAGE (B3:Q3)
7: 4 wk MA				AVERAGE (M3:Q3)

In Mini Office the dates should be entered manually and the word MEAN replaces AVERAGE.

the figure "spreadsheet" – share price moving averages", the end went missing. Unfortunately it includes all the interesting stuff including, in the formula display, the definition of the two moving averages – which the article was all about. Here is the table more fully shown:

Margaret Osborne

screen for 5 decades longer than the suggested 2 hours!

It's mentioned that my quibble with Cambase is that it is not able to reproduce the musical sharp sign – I wrote to Camsoft about this and to their credit they very kindly sent a disk with instructions, at no cost to me, to rectify the problem. Now all I need is that spare time that must come sometime before the year 2000 so that I'll be able to convert the program!

Roger Lazenby
Leeds

A right state

I am moving to the United States in the new year and want to take my PCW 8512 and assorted discs with me. What steps must I take to plug in and set up my indispensable machine? Can I plug the PCW into a transformer when using a reduced voltage is from 220/210 volts to 110 volts? What about cycle frequency? I know that I can buy a PCW 9512 over there, but I do like the versatility of the dot-matrix printer.

Nicholas Caswell
London

8000 PLUS There's quite a lot of mucking about, apparently. The US works on 60 cycle mains as opposed to our 50 cycles, and to cope with this the screen must be reset to 80x25 via two dip switches inside the machine. Your dealer should be able to help.

This means a lot of software may not work properly; maybe the best idea is to buy another 8000 over there (still available,

as far as we know) from Sears Roebuck on your vastly inflated New World salary. Or just not to go; you know Marmite is virtually unobtainable over there?

PD vs. PD

I was pleased to learn from Mr Read's letter in your November issue that there is now yet another source for Public Domain software for the PCW.

There is some excellent software available in the Public Domain for only a modest copying fee and anything that makes this more accessible to PCW users is to be welcomed. On the other hand, misleading stories about software that is difficult to install or unusable or which is badly documented put many people off. I was concerned, therefore, at Mr Reed's suggestion that existing sources suffered from such problems or that his service is anything new.

It is true that PD software obtained from bulletin boards or from general (ie non-machine specific) libraries can often be very troublesome to install simply because most of it was not written to run on the PCW in the first place. Many of these sources provide an excellent service, but you do rather take pot luck as to what you get and they have never claimed otherwise. That is why specialist PD sources exist.

We have been distributing PD software exclusively for the PCW for some time on the same basis as that mentioned by Mr Reed. All

the software in our catalogue has been specially selected from the best of the PD software around and all of it has been installed and tested on the PCW. Moreover, where the documentation has been inadequate we have rewritten it ourselves and have added further documentation files to all of our discs to help novice users get the most from the software. Every disc we distribute has a simple menu to make it easy to access this documentation and in some cases we have even added help screens to the programs to make them easier to use. There is really very little money in PD software for the PCW and so our operation is essentially a self financing hobby.

We hope that Mr Reed finds his venture as enjoyable and satisfying as we have. We also hope he will be able to promote his operation without casting unfair aspersions on those of us who are equally committed to the distribution of quality PD software for the PCW.

B-A shares

I own an 8512. Like (I guess) many owners, I use the 'B' drive almost exclusively. It is possible to replace the 'A' drive on an 8512 with a second 706K Double Density Drive? I would then have (in effect) a 9512 with second drive. I would then presumably need LocoScript 2 as supplied on a 9512. But how would an 8512

respond to having two 706K drives? Advice would be much appreciated.

John Worthen
Swansea

8000 PLUS Once running, asserts our Technical Editor confidently, there would be no problem. The snag is getting started up; you would probably need a special CP/M and certainly a special LocoScript (you can't get version 2.11, the 9512 version, by itself). The verdict at the moment is: perhaps possible, but very tricky unless you really know what you're doing. Perhaps as a trial you could try swapping the cables for the A and B drive in the back of the machine.

Please help

Would you be so kind to answer the following queries. I have been asked myself but cannot answer! I own a PCW 9512 cum Daisy Wheel cum DMP.

1. Is the above capable of a 'graphics screen dump' in Logo, Basic or CP/M?
2. Can it run a GEM, version 2 or higher?
3. Is it able to run unmodified IBM PC versions of the following software:
 - a) Lotus 1-2-3
 - b) PC Automator (Direct Technology) version 2.2H
 - c) UCSD Pascal (Pecan) version IV 2.2
 - d) First Framework (Ashton-Tate) version 1.1

Joyce Francis
Selsey

8000 PLUS I really don't think you're going to like this.

- 1) No.
- 2) Nope.
- 3a) Doubt it very much.
- 3b) Don't think so.
- 3c) Well, not really.
- 3d) Frak not.

A baffling case

It is becoming increasingly difficult to buy 3" discs in the original stiff plastic cases, as opposed to the thin card covers which in my opinion are a very poor substitute. Could you tell us of any source from which one can buy the plastic cases by themselves without the discs inside?

G K Armstrong
London

8000 PLUS Amstrad gave us their usual helpful and cheery 'No comment' but Locomotive's Howard Fisher was eager to talk to us. 'Please, please tell your readers that the plastic disc boxes are not necessary, non-vital, and you don't need them at all,' he said.

Three inch discs are the most robust of

all - protected from the outside world by a thick black plastic case and spring loaded metal covers. Compare with 5" discs which come almost naked in a paper jacket. The plastic box, according to all the dealers we talked to, is overkill and Amstrad are simply eliminating an unnecessary cost. Your discs are fine in the plastic cases.

We never even use the plastic cases and have hundreds of empties hanging around the office. Don't bother writing with a padded bag begging for a few as most of them are propping up my 9512.

Speech defect

Can you buy a 'Speech synthesizer' for my computer, if you can, will you tell me where I can get one and what cost.

Mr J Atkinson
Tyne and Wear

8000 PLUS An add-on capable of intelligible speech needs a very complicated sound chip. The only sound add-on for a PCW (was) a simple three-channel music speaker - see this month's Leisure feature in the music section.

Your best bet is to use another

machine - there is a speech synthesizer built into the Commodore Amiga, for example. Its sound chip is remarkably sophisticated and powerful yet all the games on it seem to restrict themselves to Jean Michel Jarre music.

Two sides to everything

In the August edition of 8000 Plus you reviewed a number of DTP add-on packages, including our own 'Headlines' for The Desktop Publisher. Unfortunately the review reads precisely as one would expect it to if the reviewer was under the impression it was a

single sided disc - he mentions everything on side 1 and nothing on side 2.

I think your readers should be aware that 'Headlines' is a double-sided disc, and as well as the fonts, the set of large letters, and the three sheets of graphics, there is an alternative set of large letters, and three maps on the other side. The graphics include a group of signs (stars, crosses, etc) and a couple of topographical sheets with a slight inclination towards travel. The maps are of Britain, Europe and the World.

Steve Armistage
St Annes, Lancs

They shall not grow old

I wish to transfer on to a suitable database the roll-of-honour of a WW1 infantry regiment and to be able to extract from it a range of analysed data.

The present roll comprises some 10,000 surnames and initials, presented in alphabetical order within battalions, giving place of birth or enlistment; regimental number; rank; how killed (in action or died of wounds); where; date; medals, if any. For example: (1) 14 Bn (2) Thompson S (3) b Manchester (4) 21068 (5) L/Cpl (6) K in A (7) France (8) 20/10/16 (9) MM

I am looking for a system that will provide lists of, say, 'all Leeds-born men (3) Killed in France (7) from March to August 1917 (8); or 'list in regimental numerical order (4) all men (2) in all battalions (1), who were killed at Gallipoli (7) in 1915 (8)'

Could you tell me if the 8256 is capable of supplying this demand, and, if so, what database or other accessory is needed?

T Lew Williams
Bangor

8000 PLUS Allast (Rational Solutions, 0566 81511, £39.95) will do the job. It selects over any number of conditions and squashes its data files up efficiently making it ideal for 8256s like yours. You may find that your 173K disc can only take a few thousand records (though Allast lets you store info in each record efficiently, eg. 'F' for 'France') - if so you'll have to get a memory upgrade.

I'm game

Like adventure games? Try this one. It's called 'trying to find out which games run on the 9512'.

The September Amstrad 8000 feature on the 9512 stated that Starglider doesn't run on a 9512. Well, it does on mine. The same page also says Jinxter and Guild of Thieves are not for us poor 9512

owners. But if you ring the people who made both games (Rainbird) they tell you exactly the opposite. Confused? Not half. Then in the Good Games Guide of the October 8000 Plus, games are divided into '8000s' only and 'All PCWs' the latter category presumably including 9512s. Scramble, for example, is listed as 'All PCWs' and indeed runs smooth as silk (provided you buy the right edition). Tetris is also listed as 'all PCWs' but on page 73 of the same issue you categorically state Tetris is a non-9512 game. The Pawn is also listed as 'All PCWs' and indeed Rainbird swear blind it will run on 9512, but your September issue says nay. Time and Magik, meanwhile, doesn't get a category at all!

All the retailers I've visited or called say they aren't sure what will run on the machine. Look on the box, they say. Would that it were simple. The artistic packaging of Time and Magik, for example, says nothing about 9512s on the box yet it runs beautifully. As for the software houses, some try to be helpful, some don't, but all fight shy of making definite pronouncement.

Yes, the 9512 is a relatively new machine. Yes, it's primarily for 'serious' work. But nevertheless, I'm only trying to spend some money and help the retailers and software houses pay the rent. So can anybody give me the real lowdown?

Ian Rowland
London

8000 PLUS The 9512 has caused lots of problems with games. Amstrad have always helpfully said 'Any properly written software will run on all PCWs' but have never said how CP/M differs between the models. Many games, which often have complex copy-protection routines using obscure parts of CP/M, have turned out not to work on the 9512 - the results are totally unpredictable. Sometimes a game works on some 9512s and not others! As we often have demo copies to review without copy protection we can't always tell ourselves whether a game will work or not.

The Good Software Guide editor (who shall remain nameless) has had her wrists slapped. It should have been updated from the box in the 9512 feature in September (issue 24) showing the 9512 situation, which was almost all right.

A few changes have happened since then, though. eg. Tomahawk is now out on the 9512. So here is the latest position: Don't work on 9512: Academy, Armageddon Man, Batman, Blackstar, Guild of Thieves, Head over Heels, Mindfighter, Starglider, Strike Force Harrier, Tau Ceti, Tetris. Work on 9512: Backgammon, Brian Clough, Bridge programs, Catch 23, Chess programs, Draughts, Fairlight, Gnome Ranger, Head

Listing to starboard

My Fat Joyce was one of the first available, so I will leave it to you to work out just how old she (he, it) is. She has had probably average use, certainly not heavy.

I enclose some rather poor haemorrhoid shots of the screen (I call them that because, like Polaroids, they develop quickly), which illustrate the problem. The top of the display is very wonky. Screen dumps are fine. This is not confined to LocoScript, but happens a little later when I switch on with any program.

Any ideas please?

John Nash

Watchet

8000 PLUS The commonest reason for this is the metal surrounding the screen (whose purpose is to shield it from magnetic fields) itself becoming magnetised. You have to demagnetise it (when it's switched off!) with degaussing apparatus - try your local television

engineer. It's all a problem with the display, not with the software of course; your text files and programs are still OK.

Other less pleasant causes can be defects of the coils inside in which case you'd need a specialist computer repairer.

"I TOLD HIM TO GET THAT SCREEN OF HIS FIXED"

Coach, Hitch Hikers, Jewels of Darkness, Jinter, Knight Orc, Leather Goddesses, Matchday II, Pawn, Scramble, Silicon Dreams, Sorcerer, Stationfall, Steve Davis Snooker, Tomahawk.

This list cancels all previous ones!

Sic transit gloria Sigmundi

Re 'casting spells' in the November issue. Steven Matthews might like to know that, according to LocoSpell, FREUD is a FRAUD - but a lot of people thought that already!

Vivian MacRae

West Bromwich

Right bias

I have recently been experimenting with the use of printer control codes from within BASIC (on the 9512). The manual indicates that it is a simple matter to set left and right margins using statements within programs such as: 200 LPRINT CHR\$(27);"9" or 300 LPRINT CHR\$(27);"0" Line 200 should set the left margin to the current position of the print head, whilst line 300 does same for the right margin. I say "should" because, as I discovered after much head scratching, setting the left margin only seems to be possible if the right margin has been set first.

R J Slipper
Weston-Super-Mare

Purr purr

I was greatly saddened by Ms. Greed's letter (October). My cat's priorities are

a) to sit on the pad if a manual draft is in progress; (sorry, Mr Sugar, Sir - I'll go with wash my printer-head out with soap!)

b) To walk on the keyboard (if he can get the machine to himself); c) as a last resort, to lie on the desk beside the keyboard.

I am too old to be troubled by this unbridgeable gap between the sexes, but the outlook for young people is grim indeed!

Incidentally, the only game I've ever played with my PCW was 'Hurling the Amstrad' after trying to follow the official manual. Even so, we (my cat and me!) would not be without the PCW.

H Leslie Griffiths

Ashted

Gift of life

If you can pull yourself together enough to throw me a few crumbs of advice I shall be a lifetime subscriber to your magazine! Here goes

1. I have the PCW 8512. The manual says I need CF2-DD discs for use in Drive B, yet I have not seen any ads offering these - just the CF2's. Er, where do I get the DD's or doesn't anybody actually use the things?

2. The 'Public Domain' offers are seductive and sound too good to be true. Can I really have a whole program for something like £4 or £5? Hasn't there got to be a catch somewhere?

3. I rather fancy playing about with graphics. As an absolute beginner would I find the graphics programs too advanced to understand?

Victoria Marsden

Bradford

8000 PLUS CF-2 and CF-2 DD discs are identical. Just buy any old discs and format them in the B drive as 720k; your PCW won't know the difference. Public Domain programs have a reputation for being written by computer enthusiasts, and therefore badly converted for the PCW, ill-documented and difficult to use. There are

exceptions, of course (see Mr Hartland's letter) but you can't expect every program you get for free to be as good as a commercial counterpart. As for graphics, they're probably the easiest programs to learn to use (after games). They are usually much more fun too!

Please send your £89.50 cheque for the next fifty years' subscription to The Old Barn, Somerton, Somerset, TA11 7PY.

Helpful sort

As a relatively new PCW 9512 owner I have only seen some recent issues of your magazine. However in issue 20 Mrs Francis wrote to you requesting information on a good index program for her PCW 9512, and you recommended two which you had mentioned in issues 12 and 16.

I have been unable to order these issues as there are no stocks available - can you advise me where I might be able to obtain the same or could you repeat the programs in a future issue? Any suggestions on this would be most welcome.

Mrs S A Macleod

London

8000 PLUS You only have to ask. Type in this BASIC listing (see 'Listings' for how to type a listing in if you're not sure). It sorts a list of items - say an unsorted lot of page references - into alphabetical order for you. If you prepare the list in LocoScript, save it as ASCII 'simple text', keep one item to a line, don't put in bold/italic/Cyrillic letters etc. (In disc manager, press [F1] in Loco 2, [F7] Loco 1).

When you run it insert the disc with the file to be sorted and give a different name to store the sorted file under. Back in LocoScript insert it into a Loco document with 'Insert text' ([F1] Loco 2, [F7] Loco 1). 10 DIM line\$(60000) 20 INPUT "File to be sorted": infile\$ 30 INPUT "File to put sorted

```
result into": outfile$
40 OPEN "I:",1,infile$: OPEN
"O",2,outfile$
